

Question 1 Response: Bike Lanes

10 respondents mentioned this solution.

100.00% were for installing bike lanes, and 0.00% were against this solution.

For		Against	
Create a bike/pedestrian lane on the grass side of the lake to encourage foot traffic and decrease amount of cars by lake curb			
Allow traffic to go just one way around. Take a travel lane lane and design it for bicyclists, pedestrians and the waterfowl. Raised cross walks will discourage bicyclists please do not put those in			
I live in the Lake Morton area. What I can't understand is with the amount of traffic this road has, there are no road markings all the way around the lake. The two way traffic, parking on side of road, people and birds, on coming traffic on your side of the road.. these is all huge distractions. Something has to go... either two way traffic, with a bike lane, and no parking on side of road. Or one way traffic, with a bike lane, and parking on side of road. If no parking, let people park at library; place a raised crosswalk in front of library with the flashing light when people cross. And a walk way all the way around the lake.			
Two eleven foot driving lanes, unmarked, with marked parking at the outside curb. Any remaining pavement can be a marked as a bike lane, if adequate, next to the parking.			
Paint some lanes on the road including bike lanes.			
Make the loop around the lake one-way. Allow parking on one side, add a small median and install a bike lane, on the lake side.			
Maybe make the entire lake one-way only, with a dedicated pedestrian and bicycle path on the innermost circle, and raised crosswalks from the outer to inner circle			
I think it will take a combination of things to get drivers to slow down. Speed of vehicle traffic is the most dangerous in this situation. A designated path for pedestrian or bicycle traffic or a traffic chicane could help designate separate areas for pedestrians and vehicles.			
One way traffic, add continuous large bike / running track on inside by lake, raised intersections. Bulb outs for parking areas around outside of road. Helmets and pads for the birds.			
How about calming zones? How about one way traffic with a bike and parking lane? What is being done here is a waste of time and money.
