# EXECUTIVE SUMMARY

On behalf of the City of Lakeland, PaleoWest, LLC (PaleoWest) conducted an architectural survey of historic resources in the East Lake Morton and South Lake Morton locally designated Historic Districts (Project). The Project was funded through a small matching grant from the Division of Historical Resources, Florida Department of State. The purpose of the Project was to identify, document, and evaluate all historic resources in the locally designated East Lake Morton and South Lake Morton Historic Districts constructed before 1974 and to provide the City of Lakeland with an updated inventory of contributing and non-contributing resources in the districts and recommendations for possible district amendments.

Survey methods PaleoWest implemented followed those outlined in Module 3: Guidelines for Historic Preservation Professionals. This report conforms to Chapter 1A-46 of the Florida Administrative Code: *Archaeological and Historical Report Standards and Guidelines* (Florida Department of State 2016). Resources were evaluated for listing in the National Register of Historic Places (NRHP). Documentation forms, maps, and GIS shapefiles were submitted to the Florida Master Site File (FMSF).

The City of Lakeland identified two survey areas corresponding to the boundaries of the locally designated East Lake Morton and South Lake Morton Historic Districts. The districts were listed in the NRHP in 1993 and 1985, respectively, and are both locally designated by City ordinance. The boundaries of the NRHP-listed and locally designated districts differ, and the survey areas of this Project align with the locally designated boundaries.

PaleoWest intensively surveyed the survey areas with photo documentation, notes, and FMSF form documentation. Per the grant agreement language, all previously recorded resources and all unrecorded resources constructed prior to 1974 in each district were surveyed. PaleoWest documented 1,042 historical resources comprising 341 newly recorded resources and 701 updated resources, including resource groups PO03774 (East Lake Morton Residential District) and PO01011 (South Lake Morton Historic District). Of these resources, 300 were documented within the East Lake Morton Historic District, and 739 were documented in the South Lake Morton Historic District. One additional resource (Florida Citrus Mutual [PO09587]) was documented adjacent to the East Lake Morton Historic District at the request of the City of Lakeland.

PaleoWest recommends that 157 of 158 previously recorded resources in the East Lake Morton Historic District retain integrity to contribute to the district. Of the newly recorded resources in the East Lake Morton Historic District, PaleoWest recommends 135 of 142 retain integrity and are age-eligible to contribute to the district within an expanded period of significance to 1973. PO09587 (Florida Citrus Mutual), located adjacent to the East Lake Morton Historic District, is recommended individually eligible for the NRHP under Criterion A in the agriculture and economy areas of significance with a period of significance from 1951 to 1973.

Four previously recorded resources within the East Lake Morton Historic District are also recommended individually eligible for the NRHP. Resource PO00113 (Soros Club) is recommended individually eligible for the NRHP under Criterion A in the education and social history areas of significance and Criterion C in the architecture area of significance with a period of significance from 1927 to 1973. Resource PO03411 (Park Trammell Building) is recommended individually eligible for the NRHP under Criterion A in the education area of significance and Criterion C in the architecture area of significance with a period of significance

from 1927 to 1973. Resource PO03412 (Ruthven Building) is recommended individually eligible for the NRHP under Criterion C in the architecture area of significance and potentially eligible under Criterion A in the community planning and development area of significance and Criterion B for its association with Spence Minor Stephens, with a period of significance from 1913 to 1973. Resource PO03414 (Women's Club of Lakeland) is recommended individually eligible for the NRHP under Criterion A in the education and social history areas of significance with a period of significance from 1928 to 1973. Although these buildings are individually significant, PaleoWest does not recommend the pursuit of their individual listing as they are currently contributing resources to the East Lake Morton Historic District.

Based on the results of the architectural survey of East Lake Morton, PaleoWest recommends the City of Lakeland pursue an amendment to the existing NRHP nomination. Currently, the NRHP district boundaries differ from the locally designated district boundaries. PaleoWest encourages the City of Lakeland to amend the NRHP district boundary to match the northern boundary of the locally designated district. Additionally, PaleoWest encourages the City of Lakeland to amend the district period of significance from 1900–1940 to 1900–1973. These amendments would add 154 potentially contributing resources (19 previously recorded resources and 25 newly recorded resources in district expansion area and 110 resources within the current NRHP district boundary) to the NRHP listed district and reflect significant years of development in the post-war period as well as changing middle-class architectural styles in the mid-twentieth century.

PaleoWest recommends that 528 of 541 previously recorded resources in the South Lake Morton Historic District retain integrity to contribute to the district. Of the newly recorded resources in the South Lake Morton Historic District, PaleoWest recommends 169 of 198 retain integrity and are age-eligible to contribute to the district within an expanded period of significance to 1973. Additionally, PaleoWest recommends PO00129 (Old Deen House) individually eligible for the NRHP under Criterion B for its association with C.W. Deen and Criterion C in the architecture area of significance, with a period of significance from 1912 to 1973. However, as this building is currently a contributing resource in the South Lake Morton Historic District, PaleoWest does not recommend the pursuit of its individual listing in the NRHP.

Based on the results of the architectural survey of South Lake Morton, PaleoWest recommends the City of Lakeland pursue an amendment to the existing NRHP nomination. The South Lake Morton locally designated district boundaries deviate from the NRHP listed district boundaries in three locations. PaleoWest recommends the City of Lakeland pursue amending the northeastern, northwestern, and southern boundaries. Additionally, PaleoWest encourages the City of Lakeland to amend the district period of significance from 1904–1935 to 1900–1973. Coupled with the proposed district boundary expansions, this would add 180 additional potentially contributing resources to the NRHP-listed district (12 previously recorded resources and 13 newly recorded resources in the recommended boundary expansions and 155 newly recorded resources in the current NRHP-listed district boundary). These resources reflect the evolution of middle-class architectural styles and post-war development in the district, particularly the transition towards multi-family residences.

Further, PaleoWest encourages the city to pursue an amendment to the Criteria under which the NRHP-listed South Lake Morton Historic District was nominated to the NRHP. Currently, the district is listed only under Criterion C in the architecture area of significance. However,

PaleoWest recommends the district is also eligible under Criteria A and B for its association with the development of Lakeland during the Florida Land Boom Period (1919–1929) and its association with numerous prominent Lakeland politicians and businessmen.

Historic resources documented in this survey were predominantly built circa the Florida Land Boom Period of development. Secondary results reflect the WWII and Aftermath (1942–1959) and Great Depression and the New Deal (1930–1941) periods of development. The Progressive Era (1890–1918) and Contemporary Period (1960–1973) of development are equally represented, with approximately eight percent of documented resources dating to each period, respectively. Three buildings assessed as historic resources were constructed in the Modern Period and are not historic age. Two of these resources were previously documented as historic buildings (PO00732 and PO00697), and one was newly documented (PO009586) due to its significance to the community and potential eligibility when it reaches historic age.

Most documented resources throughout the East and South Lake Morton historic districts, approximately 70 percent, are single-family residences, and 23 percent of documented resources are apartments and multi-family residences. The remainder of documented resources are a variety of uses, including commercial and community amenities, like club buildings or community centers. East and South Lake Morton both developed as residential areas of Lakeland at the turn of the twentieth century and experienced rapid development during the Florida Land Boom Period of development. While East Lake Morton developed as a predominantly working-class community, with architecture reflective of this economic class, South Lake Morton developed to cater to the more upwardly mobile residents of Lakeland and features more ornate and high-style homes. The historic architectural resources of East and South Lake Morton reflect broad trends in Florida's history and development and the evolution of popular architectural styles in America during the twentieth century.

The results of this Project serve as an archival record of the East Lake Morton and South Lake Morton Historic Districts at the time of the survey. The historical overview contained in this report provides a historical and developmental context for each historic district and presents context for resources constructed after the district's current periods of significance. This survey provides a foundation for amending the NRHP-listed East Lake Morton and South Lake Morton Historic Districts to reflect changes in the built environment. Ultimately, this work forms the basis for future preservation efforts in the East Lake Morton and South Lake Morton Historic Districts.

## ACKNOWLEDGEMENTS

PaleoWest would like to thank the communities of East and South Lake Morton and the City of Lakeland for their assistance and extensive knowledge of the survey areas. We are particularly appreciative of Emily Foster, Senior Planner, City of Lakeland Historic Preservation & Economic Development office, for her management of the Project, knowledge of the East and South Lake Morton communities, and commitment to historic preservation in the City of Lakeland.

PaleoWest also thanks Cindy Glover, City of Lakeland Community Engagement Coordinator, for her public outreach prior to the completion of fieldwork. Community engagement and education are essential for the successful completion of historic resource surveys.

Our fieldwork team thanks the residents of the East Lake Morton and South Lake Morton communities, who showed appreciation for their neighborhoods and a desire to preserve their community's shared history. District residents permitted photographs, answered questions about their properties, and were respectful of PaleoWest's field employees. It is the hope of PaleoWest that this survey will continue to provide helpful information for future historic preservation efforts in the East Lake Morton and South Lake Morton Historic Districts.

This Project is sponsored in part by the Department of State, Division of Historical Resources, and the State of Florida. A Small Matching Grant was awarded to the City of Lakeland by the State of Florida, Department of State, Division of Historical Resources. PaleoWest would like to give a special thanks to Nicole Hu, M.A., FCCM, for her facilitation and management of this Project.

# CHAPTER 1. PROJECT LOCATION AND PURPOSE

PaleoWest conducted an architectural survey of the locally designated East Lake Morton and South Lake Morton Historic Districts in the City of Lakeland, Polk County, Florida (Figure 1-1). The purpose of this Project was to identify, document, and evaluate all historic resources constructed before 1974 in the survey areas and to provide the City of Lakeland with an updated inventory of contributing and non-contributing resources in the respective districts and recommendations for possible district amendments. The City of Lakeland identified two survey areas corresponding to the respective boundaries of the locally designated East Lake Morton and South Lake Morton Historic Districts. The districts were listed in the NRHP in 1993 and 1985, respectively, and both are locally designated by City ordinance. The boundaries of the NRHP-listed and locally designated districts differ, and the survey areas of this Project align with the locally designated boundaries (Figure 1-2).

Fieldwork was completed in October 2022 by Secretary of the Interior's Professional Qualification Standards qualified Architectural Historians, Althea Wunderler-Selby, M.S., Emma Keethler, M.A., and Meredith McCulley, M.A., and field technicians Amy Alleman and Jessica Flint.

The following report is presented in eight chapters. Chapter 1 defines the Project location and purpose, Chapter 2 outlines the Project research designs and methods, Chapter 3 provides research contexts, Chapter 4 provides an architectural context, Chapter 5 is an analysis of the results of the survey, Chapters 6 and 7 provide recommendations and conclusion, and Chapter 8 provides a bibliography of sources. Attached are three appendixes: Appendix A—Resource Tables and Inventory, Appendix B—Survey Log and Report Maps, and Appendix C—Results Maps.

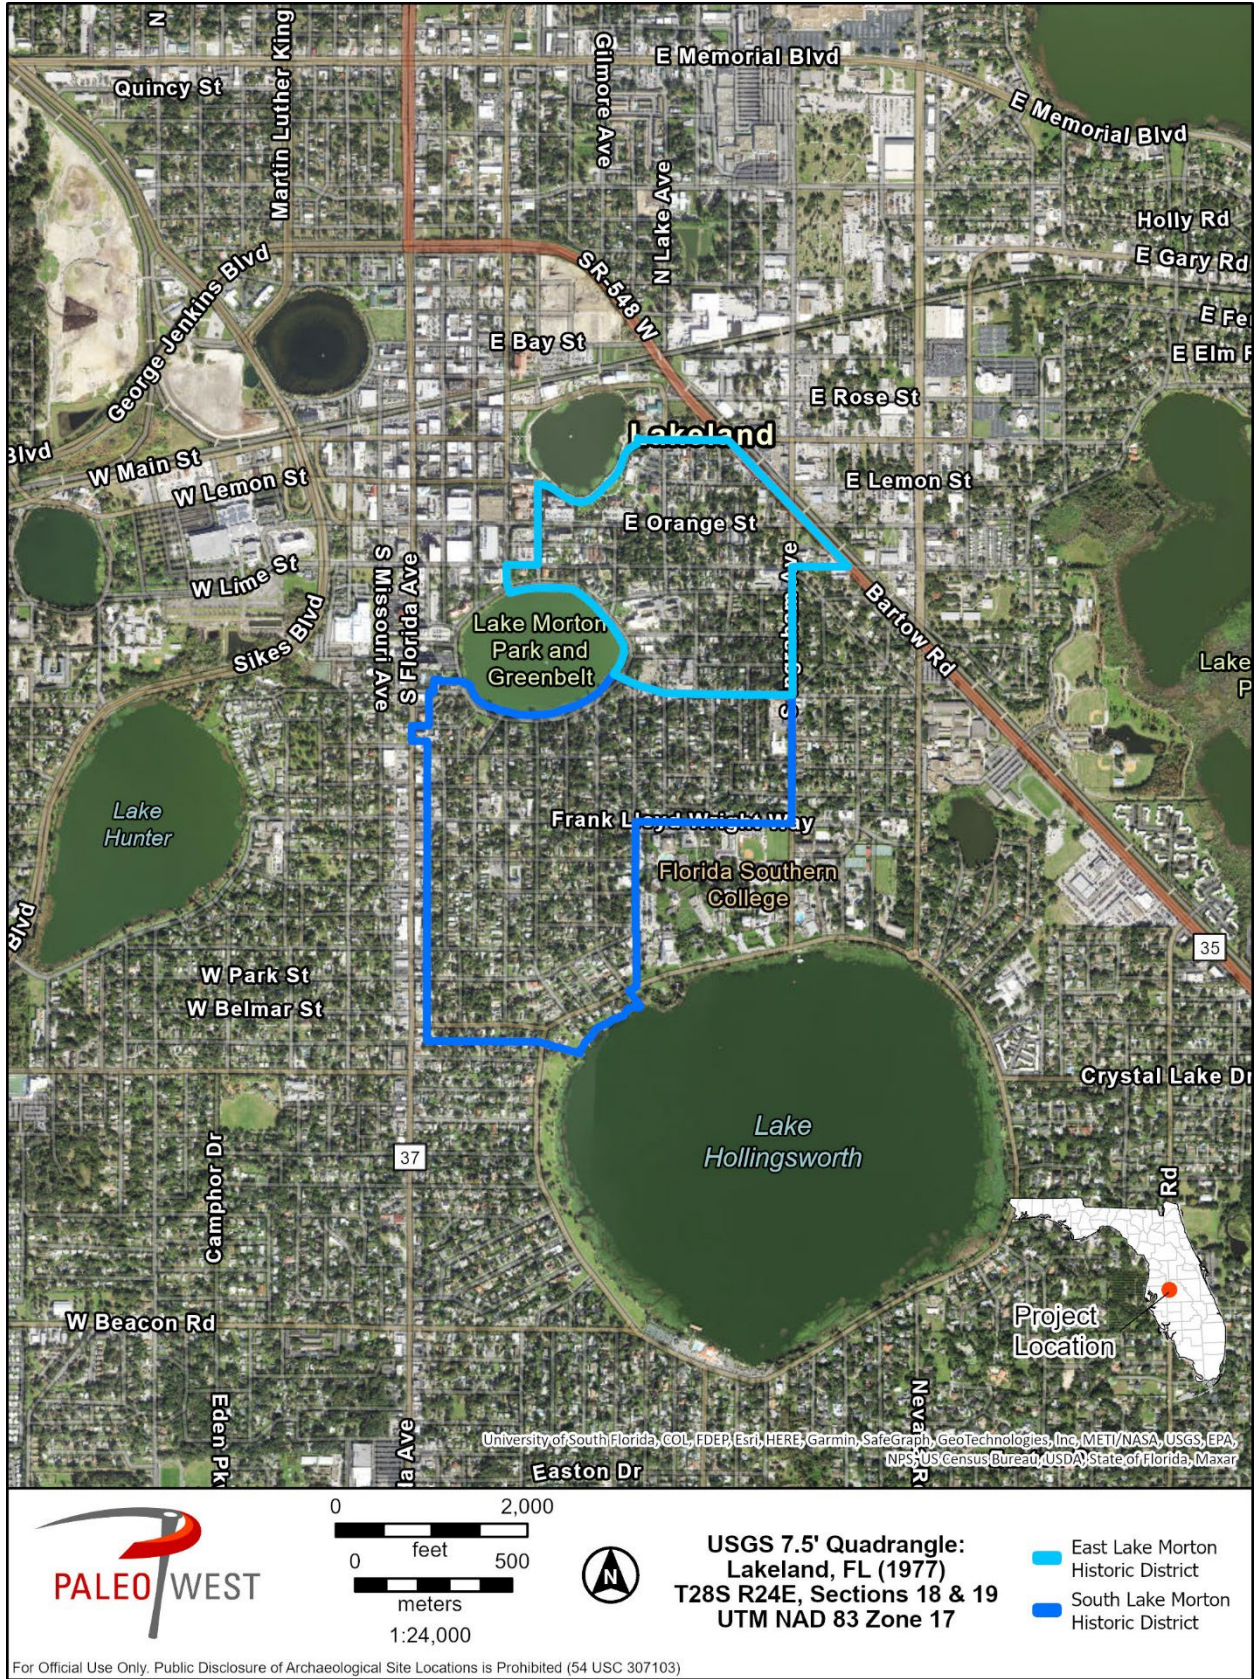

Figure 1-1. Map of Project survey areas on aerial photography.

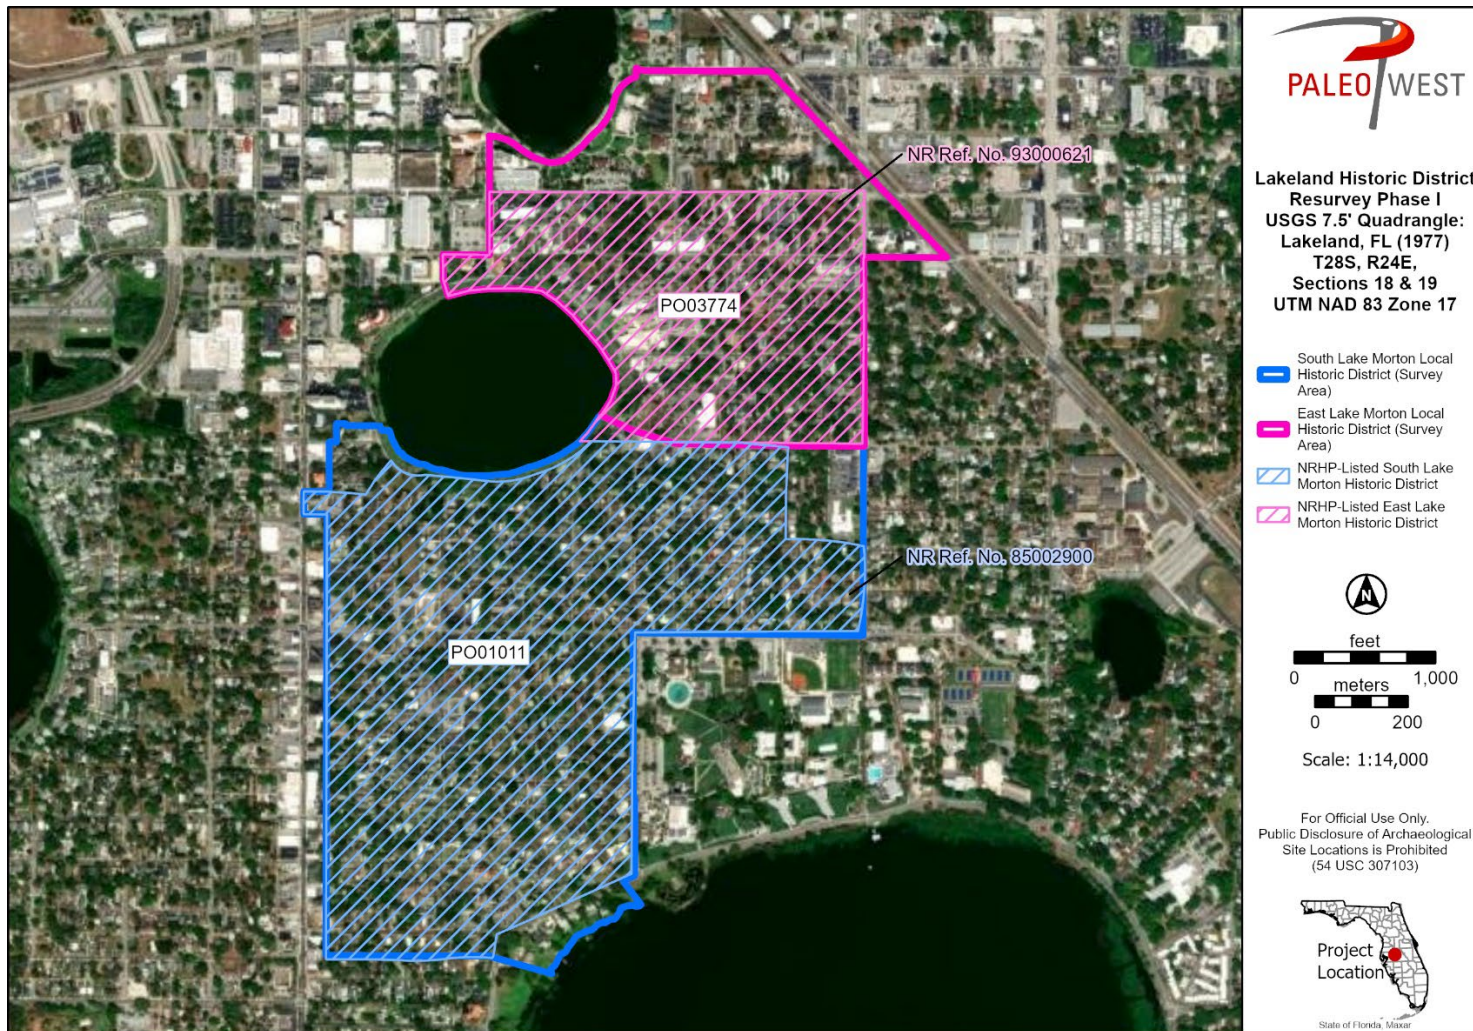

Figure 1-2. Map of Project survey areas and their respective NRHP-listed Historic District boundaries on aerial photography.<sup>1</sup>

<sup>1</sup> As depicted in the FMSF and in scanned maps accompanying the NRHP-listed East Lake Morton Residential Historic District, the southwestern district boundary extends one block further north than depicted in the above figure. However, the resource located on that block (PO09587) is not listed in the contributing or non-contributing inventory for the district. At the request of the City of Lakeland, PaleoWest has plotted the NRHP-listed district boundary to omit this resource.

# CHAPTER 2. RESEARCH DESIGN AND METHODS

## 2.1 HISTORIC PRESERVATION REGULATIONS

The laws and regulations that inform historic preservation in the United States are formed at all levels of government, from federal to local. The earliest iteration of historic preservation policy in the United States can be traced to the *Antiquities Act* of 1906. This act authorized the President to designate historic, natural, and scientific landmarks on land owned or controlled by the Federal Government as National Monuments. After signing the act into law, President Theodore Roosevelt established 18 National Monuments, many of which have since been designated as National Parks (U.S. Department of the Interior 2016). The passage of the *Historic Sites Act* of 1935 further developed national historic preservation policy. This act declared it a national policy to preserve historic sites, buildings, and objects of national significance for public use and the benefit of the American people. To accomplish this, the Secretary of the Interior was given the power to create historic and archeological surveys and to secure and preserve data of historic and archaeological sites, buildings, and objects (Historic Sites Act of 1935 2021).

Modern historic preservation legislation emerged in the latter half of the twentieth century with the passage of the *National Historic Preservation Act* (NHPA) of 1966. Spurred by the dismal condition of America's historic resources outlined in the landmark report, *With Heritage so Rich*, the NHPA presented the most comprehensive national preservation policy thus far enacted. It established the NRHP, the Advisory Council on Historic Preservation, Section 106 Review, and the State Historic Preservation Offices required to maintain state-wide inventories of historic resources. The NRHP extended beyond individual buildings and included structures, districts, objects, and archeological sites, ranging from local to national significance (National Historic Preservation Act 2022). In a subsequent amendment to the act, the Certified Local Governments (CLG) program was established. A program that allows local governments to become active partners in the Federal Historic Preservation Program. A decade after the passage of the NHPA, Federal Historic Tax Credits were established in the United States Tax Code. This program incentivized private sector investment in the rehabilitation of historic buildings for income-producing uses (Historic Preservation Tax Incentives n.d.).

On the state government level, Florida has established its program of *Historic Property Tax Exemption*. Authorized by Section 196.1997 of the Florida Statutes, the program allows counties and municipalities to adopt ordinances allowing property tax exemptions for up to 100 percent of the increase in assessed improvements of a qualified historic property resulting from rehabilitation (Property Tax Exemption n.d.). *The Florida Archives and History Act* of 1967 was the first state-wide historic preservation policy. It recognized the unique heritage of the state and the social, cultural, and economic impacts of the loss of historic resources. The act, changed in name to *The Florida Historic Resources Act* in 1986, was codified in Florida Statute 267, and gave authority to local governments to further historic preservation goals (Abney 1998).

This assemblage of federal, state, and local historic preservation regulations guides efforts to preserve historic resources. At the federal level, authority is limited to federally owned

properties or projects that require federal funding or permitting. States are similarly limited in authority, leaving local governments primarily responsible for the preservation of historic resources within their communities. The onus of preserving Florida's heritage and historic built environment falls to local governments, elected officials, and community members.

## 2.2 SURVEY METHODS

Selection methods for survey are often geographic or thematic; the present survey area was defined by geography. A geographic survey focuses on a location, with the goal of recording all age-appropriate resources within established geographic boundaries. The location can include a subdivision, neighborhood, district, or city limit. If a survey area is larger than the scope of work allows, then geographic surveys are often executed in phases. In the case of a thematic approach, a specific theme drives the investigation. For example, a thematic approach may document all churches or wooden bridges within a city or county. The goal of this survey was to identify, document, and evaluate all historic resources in the locally designated East Lake Morton and South Lake Morton Historic Districts constructed before 1974 and to provide the City of Lakeland with an updated inventory of contributing and non-contributing resources in the respective districts and recommendations for possible district amendments.

The City of Lakeland identified two survey areas corresponding to the respective boundaries of the locally designated East Lake Morton and South Lake Morton Historic Districts. The districts were listed in the NRHP in 1993 and 1985, respectively, and are both locally designated by City ordinance. PaleoWest identified all previously recorded resources and all unrecorded resources constructed prior to 1974 in each historic district using records in the FMSF, Polk County Property Appraiser data, and historical maps. Concurrently, historians were conducting research into the Project survey areas with the aim of identifying historically significant people, places, and events. As a result of the analysis of the FMSF, property appraiser data, and historical maps, 345 historic buildings and structures were identified for survey in the East Lake Morton Historic District and 774 historic buildings and structures were identified for survey in the South Lake Morton Historic District. During fieldwork, 74 selected resources were found to be demolished, and a small number of resources were determined to be visually inaccessible or duplicate addresses, resulting in the documentation of 1,040 historic buildings and structures.

PaleoWest conducted fieldwork according to professional standards, documenting each resource with photographs of elevations, notes on architectural features, and GPS verification. Each resource was evaluated, and integrity was assessed. Field notes focused on describing architectural elements and integrity, which were then used when addressing the site description and eligibility of each individual resource included in the survey. Resources were placed within the surrounding physical context and evaluated individually and, if applicable, considered with respect to a potential district. As surveyors were not permitted to trespass onto private property, they inspected each building from the right of way. Visual assessments from the right of way provided sufficient evidence of alterations and additions. Equipment and materials used in the field included digital data collection devices equipped with a high-quality digital photography camera. Forms were completed for each resource.

Architectural historians then compared the information collected in the field with existing records. This included a review of the parcel ID, architectural features, style type, address, and present and original use. The integrity of each building was evaluated using the guidelines established by the NRHP and the FMSF. The architectural significance, historical themes, dates

of construction, and periods of significance were evaluated according to the Criteria of evaluation for the NRHP. Tables were prepared classifying buildings into periods of historical development, present and original use, and architectural style. Architectural and historical contexts were composed to illustrate development patterns, significant historical events, and the major architectural influences represented in the survey areas. This historical context information was obtained from local oral and written histories, newspapers, archival research, and secondary sources.

Following the completion of the survey report and resource assessment, a FMSF form for each surveyed resource was completed. Original forms were completed for newly recorded resources, and updated forms were created for previously recorded resources. These forms were submitted to and are retained by the FMSF. Per Module 3, 1A-46, FAC, Project documents (report, field notes, photographs, etc.) are curated at the PaleoWest office in Tampa Bay, Florida.

## 2.3 EVALUATION

Four Criteria are applied during the evaluation of a resource's eligibility for inclusion in the NRHP. Normally, a resource must be at least 50 years of age and meet at least one of the following four Criteria to be considered eligible for listing in the NRHP:

- Be associated with events that have made a significant contribution to the broad patterns of our collective history (at a local, state, or national level) (Criterion A); or
- Be associated with the lives of persons significant in our past (at a local, state, or national level) (Criterion B); or
- Embody the distinct characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represents a significant and discernable entity whose components may lack individual distinction (Criterion C); or
- Yield, or be likely to yield in the future, information significant in prehistory or history (Criterion D).

PaleoWest architectural historians used these Criteria, in conjunction with evaluations of integrity, to provide recommendations concerning the NRHP-eligibility status of all of the recorded historical resources. Integrity is defined as the ability of a property to convey its significance and it is evaluated using seven aspects: location, setting, design, materials, workmanship, feeling, and association. To retain integrity, a property must possess several or all aspects of integrity. In addition to evaluating individual NRHP eligibility, each resource was evaluated for its ability to contribute to the NRHP-listed South Lake Morton Historic District or East Lake Morton Historic District, and their respective locally designated districts.

Resources are recorded in the FMSF regardless of significance. The FMSF is not a register of historic properties but an archive for documents concerning the historical resources of Florida. Each FMSF form is a permanent record of a historical resource. When submitting a resource to the FMSF, a site file number must first be assigned by the Florida Division of Historical Resources. A FMSF form is then completed using this site file number and the record is submitted to the FMSF for archiving.

## CHAPTER 3. RESEARCH CONTEXTS

A review of research contexts is a prerequisite for an architectural survey, providing perspective for fieldwork, analysis, and interpretation. The research contexts are presented here in three sections: environmental context, developmental and historical context, and previous research. As the focus of the survey is historic architecture, the developmental and historical context focuses on those periods relevant to this study.

### 3.1 ENVIRONMENTAL

The survey areas are in the Florida section of the Atlantic Plain physiographic region, which stretches from northern to central Florida. The topography in this region is characterized by limestone deposits, low hills, and many lakes. Paleoenvironmental reconstructions for this physiographic zone have shown that the vegetation of the region during the last glacial maximum (around 20,000 B.P.) was dominated by southern Diploxylon pines (*Pinus*) (20-40%), oaks (*Quercus*) (20%), and hickories (*Carya*) (20%) (Delcourt and Delcourt 1987a). The glacial conditions and the expansion of the Laurentide ice sheet, drove some cold-hardy species like poplars (*Populus*) and ash (*Fraxinus*) into the region, but these remained minor components (Delcourt and Delcourt 1987b). As the climate began to warm, the more northerly vegetation components began to recede (Delcourt and Delcourt 1987b).

The Environmental Protection Agency (EPA) defines the ecoregion of the survey areas as the Bone Valley Uplands within the Southwestern Flatwoods District (Griffith and Omernik 2008). This ecoregion covers the mid-southwestern portion of the Florida peninsula with the Gulf of Mexico to the west. The Southwestern Flatwoods District consists of Miocene and Pliocene sedimentary rocks and sediments, and Quaternary deposits are thin and nonexistent. The Bone Valley Uplands are a poorly drained plateau underlain by deeply weathered sand and clayey sand of the Bone Valley Formation. Flatwoods with cypress heads and stands exist in most places. The elevation of the upland is typically greater than 40 meters above mean sea level (Brooks 1983). Modern land use in the survey areas is residential development (Figure 3-1).

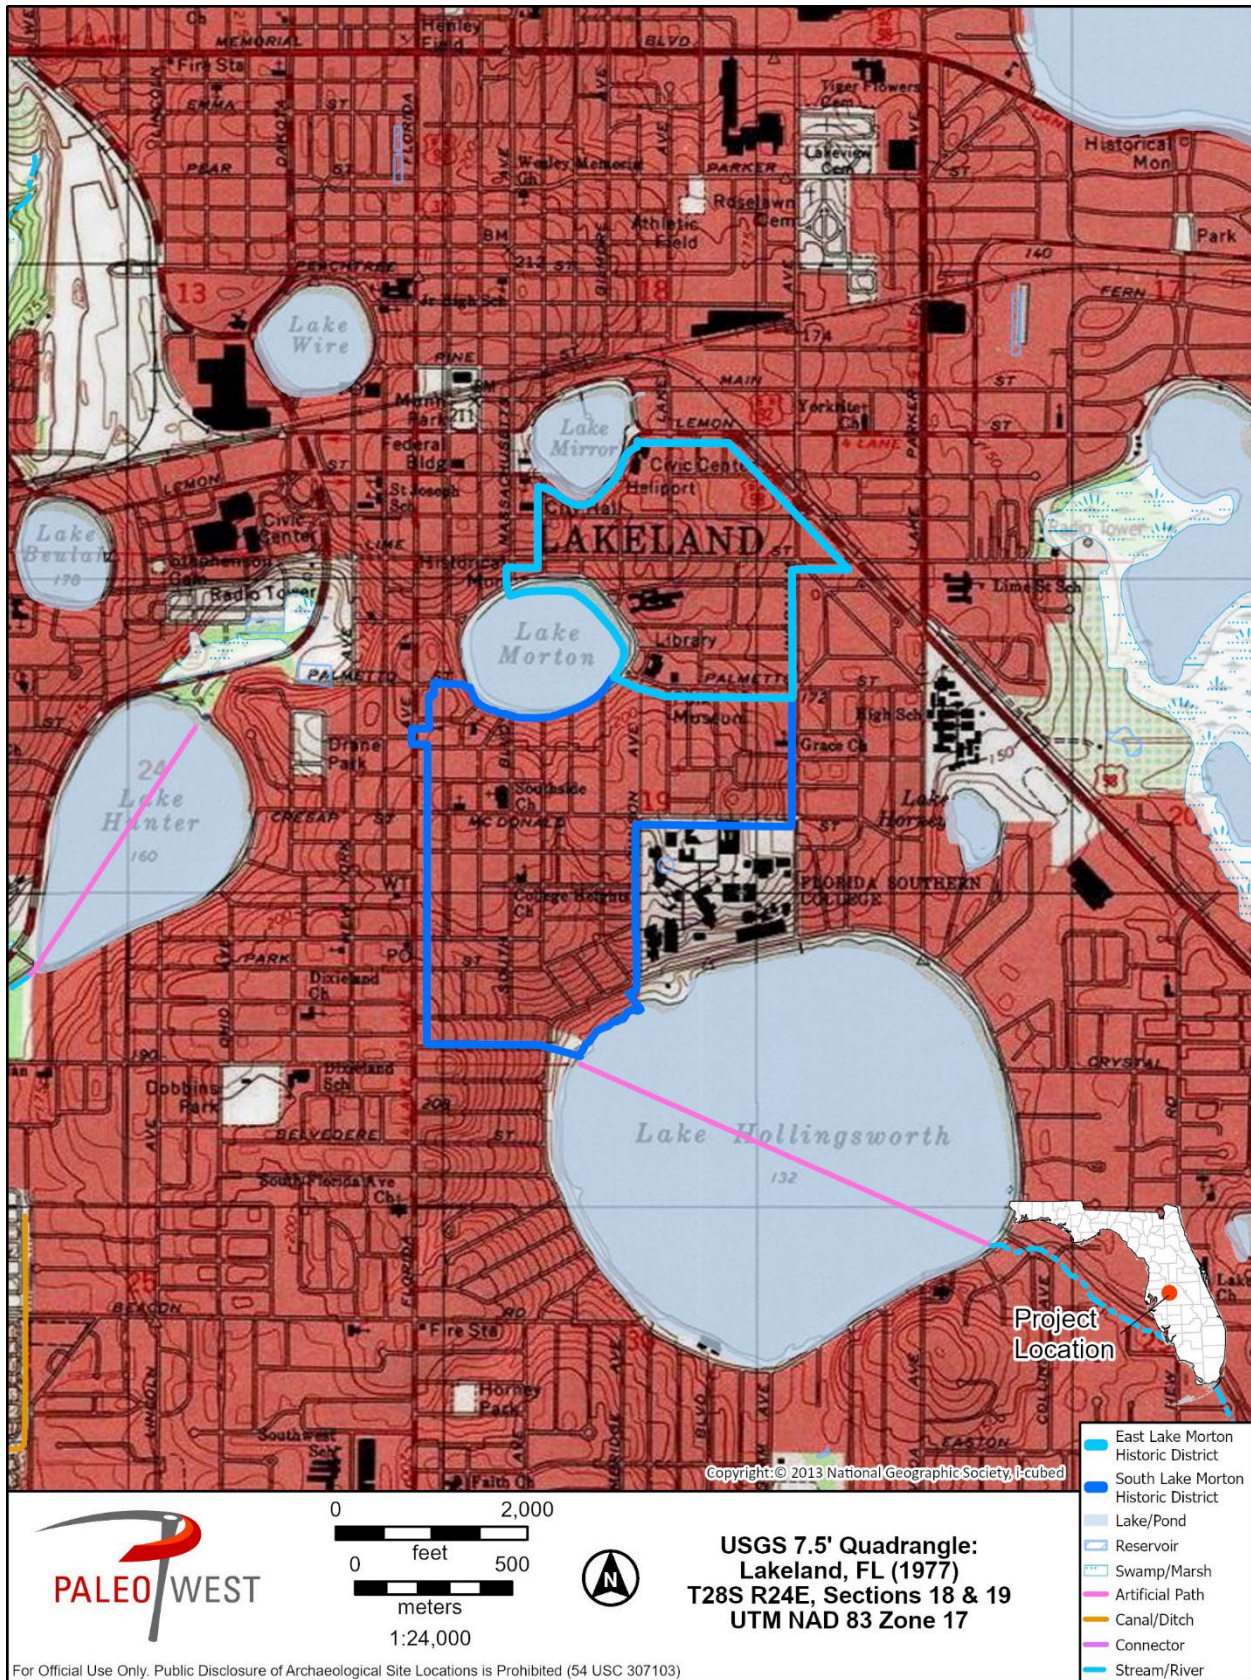

Figure 3-1. Map of Project survey areas on topographic layer with major water features.

## 3.2 DEVELOPMENTAL AND HISTORICAL CONTEXT

Prior to the settlement of the Lakeland area in the mid- to late nineteenth century, the area was occupied primarily by the Seminole, who ceded much of their lands to the United States through the signing of the Treaty of Moultrie Creek in 1823. The area remained mostly forested until the arrival of pioneer settlers following the passage of the Armed Occupation Act of 1842. A hurricane struck central Florida in 1848, forcing many settlers from Tampa and other areas further inland. Among the pioneers to settle in the area at that time were Jessie Keen, Kohn Futch, and John Henry Hollingsworth, for which Lake Hollingsworth is named. They are said to have established farms by initially squatting on public lands and later purchasing them (Hetherington 1928:85).

The original 1850 land survey (Figure 3-2) illustrates the undeveloped nature of the areas adjacent to Lakes Hollingsworth and Morton in the mid-nineteenth century. Lake Hollingsworth is bordered to its north by a wooded area leading east to the western edge of Lake Bonny, with what appears to be a single structure at its center near the northeastern corner of Lake Hollingsworth (Original Land Survey of Township 28 South Range 24 East 1850).

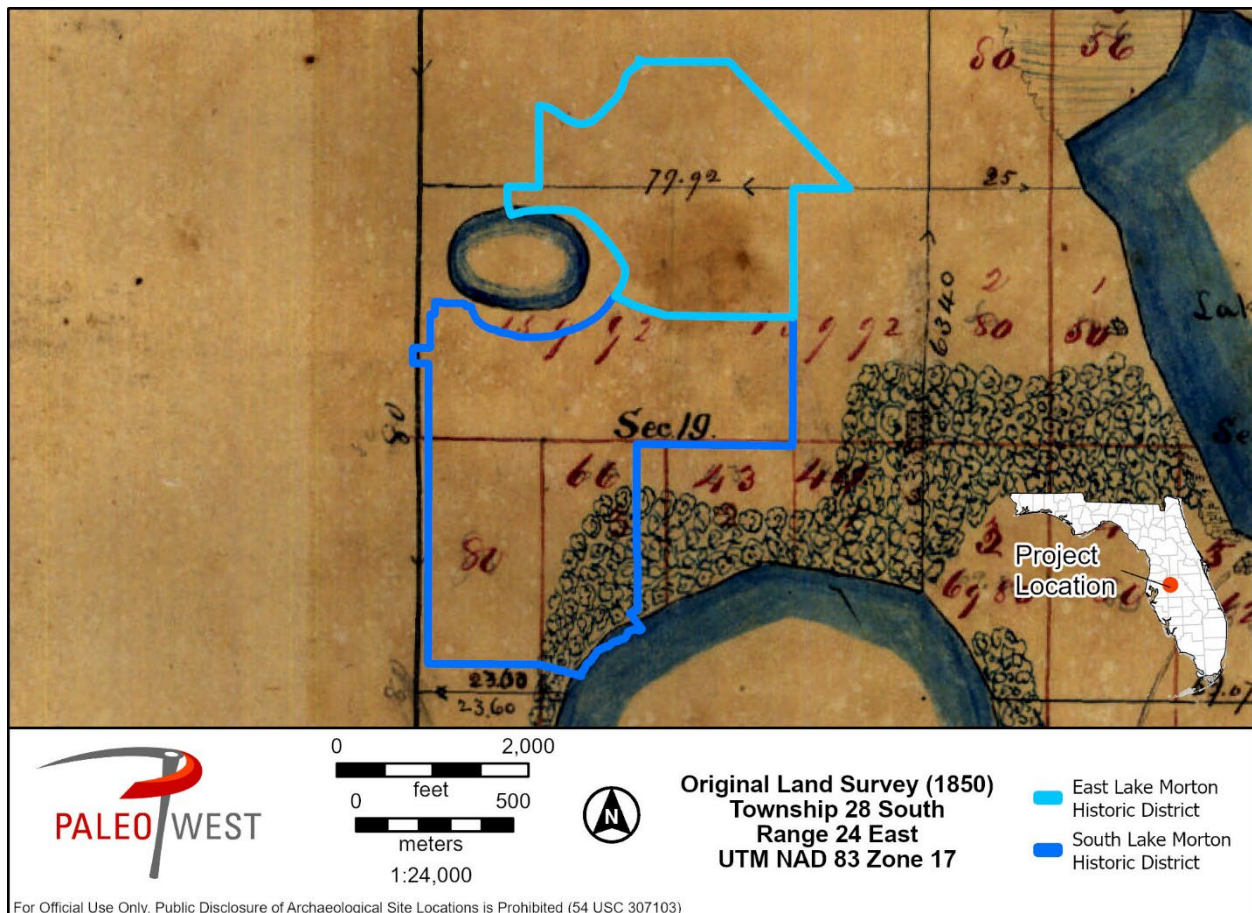

Figure 3-2 . Original 1850 land survey with historic district boundaries overlain (GLO 1850).

Following these pioneers' lead, wealthy manufacturer Abraham G. Munn of Louisville, Kentucky, purchased thousands of acres throughout southern Florida from the trustees of its Internal Improvement Fund in 1881. Among this was property in Polk County, which had been formed just 20 years prior from sections of Hillsborough and Brevard. Munn dispatched his son, Morris G. Munn, to evaluate the area with the help of a county surveyor by the name of Schipman. They ultimately selected an 80-acre site where Morris Munn's brother, Samuel Munn, plotted the town in 1884, and his father Abraham G. Munn, Samuel A. Hartwell, and Charles E. Hillman formed the Lakeland Improvement Company soon after, with a capital stock of \$50,000 (Hetherington 1928:88).

The establishment of Lakeland was initially threatened by Acton, a small community to the east, but its remote location on low-lying lands between two lakes prohibited its perpetual growth. Within a few years of Lakeland's incorporation, Acton became a "deserted village," as its buildings were soon dismantled and "hauled off" by individuals "who wished to use them in construction elsewhere" (Hetherington 1928:89). Henry Bradley Plant's Florida Southern Railroad established a depot "a mile or so east of Acton," bypassing Lakeland, near Lake Parker, which was later lost to fire (Hetherington 1928:89). Railroad crews first arrived in the area to establish a work camp on Lake Wire in 1883 under the direction of the town's first unofficial white resident, Herbert J. Drane, who would later become a judge and for which Drane Field would be later named. Crews consisted of African American men whose names have been lost over time (Hetherington 1928:89; Hamilton 1972).

The railroad linked the Lake Wire camp with Tampa by 1884, and Abraham Munn was not willing to let the line bypass the 80-acre site his sons had surveyed. He donated several acres and some right-of-way for the construction of a terminal and trackage. The railroad was not willing to fund the construction of a terminal, however, which prompted Munn to have one built (Figure 3-3) at a cost of \$2,500 (Hamilton 1972). The construction of the depot led Munn and others to assemble to form a town. Suggested names originally included Munnville, Red Bug, and Rome City, but Lakeland was ultimately chosen by Reverend P.R. McCrary, E.R. Trammell, and Dr. J.L. Derieux due to the area's plentiful lakes. The incorporation of Lakeland on January 1, 1885, was followed by the construction of the area's first hotel by Munn, the Tremont Hotel (Figure 3-4), which was once described as "one of the best hostelrys in Florida" (Brief History of Lakeland n.d.; Hetherington 1928:89). The Florida Southern Railroad connected Lakeland with nearby Pemberton by August 1885, and a ceremony dedicating the line was held by the following October, with Samuel M. Munn acting as its grand marshal. The celebration included a baseball game, a barbecue, and speeches by the city's mayor and other local officials and businessmen (Hetherington 1928:90).

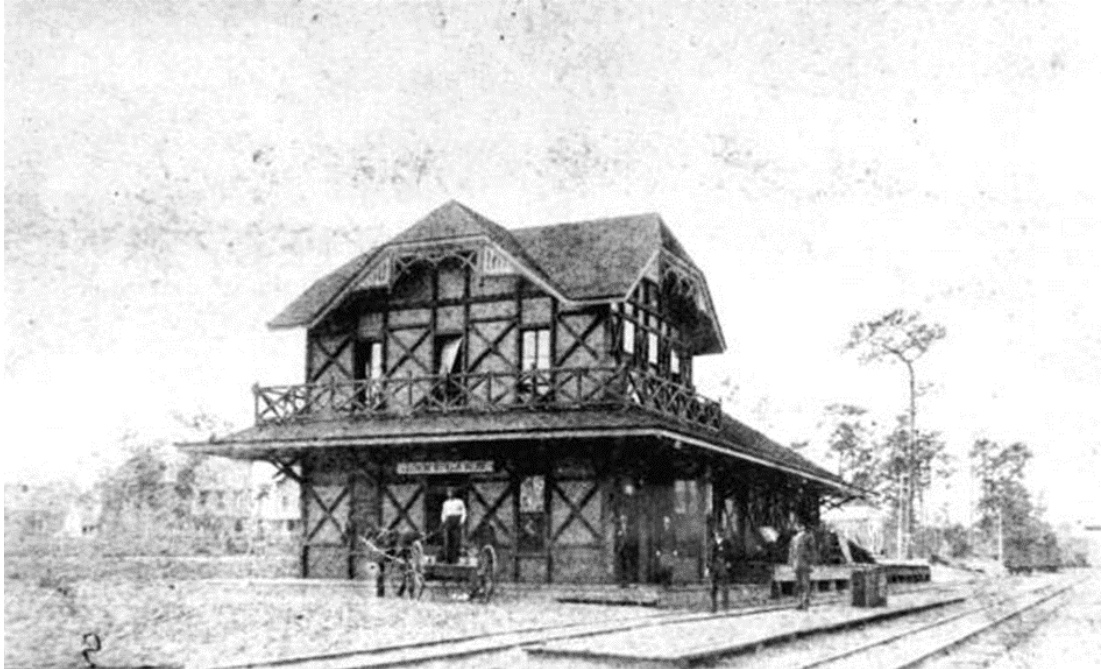

Figure 3-3. Photograph of elaborate railroad station constructed by Abraham G. Munn at a cost of \$2,500 in 1884, which was later lost to fire in 1901 (Image courtesy of State Library and Archives of Florida, Florida Memory, Reference Collection, RC08980).

Figure 3-4. Tremont Hotel, photographed shortly after its construction, circa 1885. The structure was later moved, and the Lakeland Terrace Hotel was constructed at its former location (Image courtesy of State Library and Archives of Florida, Florida Memory, General Collection, N033911).

Shortly after Lakeland's incorporation, local Medulla resident and postmaster, L.M. Ballard, took it upon himself to relocate the nearby town's post office to the newly formed town. An increase in mail volume due to the arrival of the railroad brought the matter to the attention of postal officials, prompting them to establish the Lakeland post office soon after, with Dr. F.L. Brooks acting as its postmaster. Ballard was instructed to return to the post he had abandoned in Medulla but opted instead to remain in Lakeland and continue to develop what was one of its earliest mercantile stores. Churches, banks, doctor's offices, general stores, pharmacies, real estate agencies, engineering firms, and a host of other businesses and civic organizations soon followed, transforming what was once a random stop along Henry Plant's railroad into a bustling small town (Hetherington 1928:90). Much of the labor needed to construct these improvements was completed by the town's African American population, which reached approximately 150 persons by 1887. The African American community was said to have had "a neat church" and was once described as "industrious and thrifty" (Hetherington 1928:91).

By 1886, officials had passed an ordinance limiting the activities of Lakeland residents and visitors, which prohibited "stragglers around the town" (Brief History of Lakeland n.d.). Early farmers such as Ed Tinson and C.M. Marsh worked to establish the citrus industry in the area by the 1880s and were joined by H.S. Galloway, who founded one of the first and most profitable strawberry farms by 1888. The discovery of pebble phosphate in the Peace River further augmented the growth of the area, as nearly two dozen trains made stops at the depot Munn had constructed by the turn of the twentieth century. The Lakeland Park Association was formed in 1888 and charged with the beautification of the park at the heart of Lakeland's downtown business district (Figure 3-5). Activities included planting trees and shrubs, organizing festivals, and fundraising, which culminated in the construction of a pavilion that acted as a civic center for the growing town but also as its initial city council chambers. The building also served as Lakeland's first archive, hosting its public records, a portion of which were reportedly eaten by a goat that was "browsing in the park" (Brief History of Lakeland n.d.; Hetherington 1928:92).

Figure 3-5. Spectators look on during baseball game at what would later become Munn Park, circa 1885 (Image courtesy of State Library and Archives of Florida, Florida Memory, Reference Collection, RC18246A).

Investment and improvement to the emerging town continued, with Abraham G. Munn's brother-in-law, John P. Morton, purchasing timbered lands adjacent to a lake south and east of his 80-acre tract in 1889 and transforming much of it into a citrus grove (Figure 3-6). Munn had married Morton's sister Rebecca in 1845, which may explain the two men's shared interest in developing the area (Hetherington 1928:295–296). A number of homes were constructed around the lake, which soon became known as Lake Morton (Figure 3-7) (Edwards 1984:6). Two years later, William James Carter and his two brothers purchased thousands of acres of land east of the city. Carter had come from Jesup, Georgia, to provide ties for the railroad and soon harnessed the economic potential of the heavily-forested area that once surrounded Lakeland by establishing a sawmill along the railroad line known as "Carter's Mill" (Hetherington 1928:211). He and his brothers also produced turpentine, and within a short time, a small community known simply as "Carters," with its own post office, was established near the mill. Within a few short years the, W.J. Carter Lumber Company had established itself as one the leading firms in the state, serving the local building needs of not only central Florida but also exporting finished lumber projects worldwide through the Port of Tampa via the railroad (Edwards 1984:7).

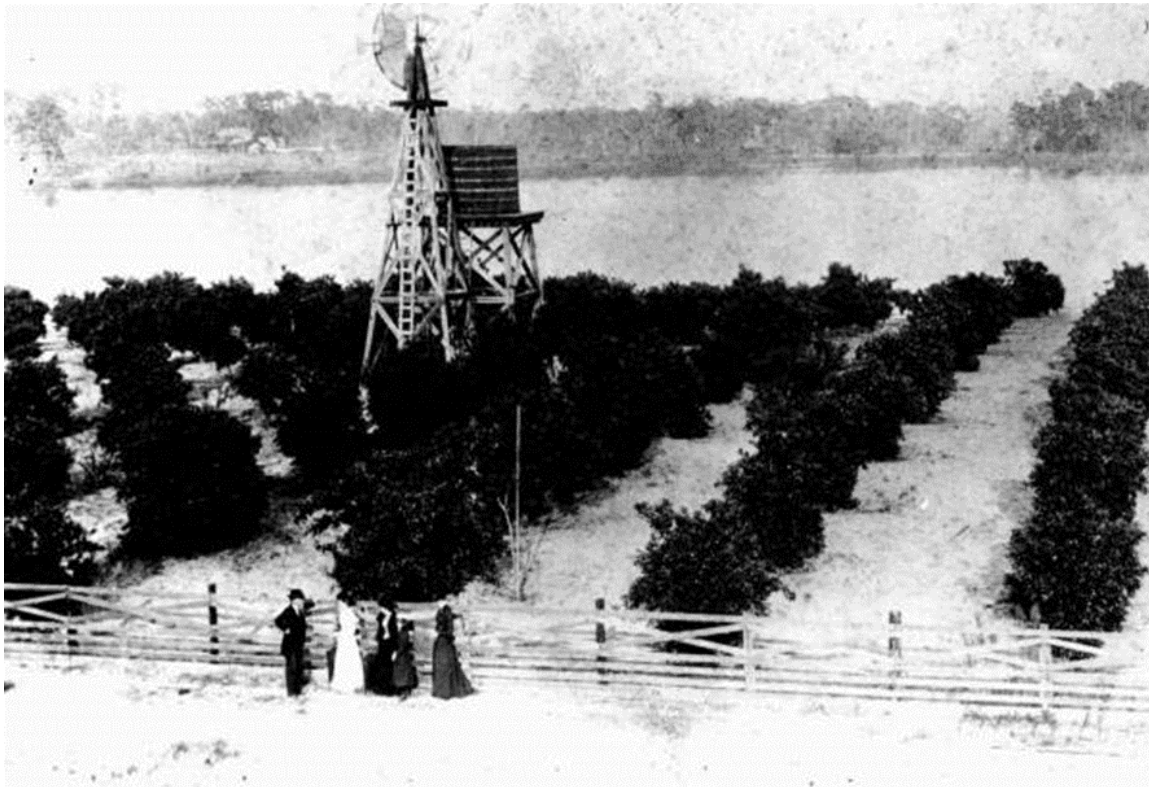

Figure 3-6. Orange grove believed to be that of John P. Morton overlooking the lake that bears his name, circa 1890 (Image courtesy of State Library and Archives of Florida, Florida Memory, Reference Collection, RC05449).

Figure 3-7. Postcard with hand-colored photograph of Lake Morton (Image courtesy of State Library and Archives of Florida, Florida Memory, Postcard Collection, PC07816).

As an indication of the Carters' financial success in the area, Henry Bascom Carter relocated his family to the Lakeland area in 1901, building what was once described as "one of the handsomest homes in Lakeland" on the shore of Lake Morton (Hetherington 1928:212). By the following year, his brother's lumber company (which he was managing) was employing as many as many as 1,500 men. Some lived in the nearby community of Ragtown, while others commuted via train. Soon after, Henry Bascom Carter joined with Columbus William Deen to purchase the firm and rename it, Carter Manufacturing Company, in 1905. Like its predecessor, the firm focused largely on finished lumber materials such as sash, shingles, and doors made from pine and cypress. The company continued to produce turpentine and pitch as well, selling the two products primarily to Consolidated Naval Stores in Jacksonville (Hetherington 1928:211; Edwards 1984:7).

While the Carters fueled the growth of the local turpentine and timber industries in more rural areas, others worked to improve Lakeland itself. Harry C. Sloan established the town's first power plant at the corner of Cedar Street and Massachusetts Avenue with the financial support of Mrs. E.B. Briggs in 1891. With its completion, Lakeland joined Tampa and Jacksonville as one of only three cities in Florida with electricity. The head offices of the Winston & Bone Railroad were moved to Lakeland in 1893, coinciding with the construction of a state hospital for the insane and the opening of a cigar factory in the area. As many as 20 trains were arriving and departing from Lakeland daily by this time, and by the following year, the railroad was contributing roughly \$2,000 a year to the local economy (Hetherington 1928:92–93).

A campaign highlighting the proximity of Lakeland to the railroad line began in 1895. The city council appropriated funds to assist the *Lakeland Sun* in producing and distributing a promotional pamphlet that featured its growing list of amenities. Norman Riggins arrived to establish a small sawmill on the shores of Lake Morton in 1895. He later moved his operation to the intersection of the railroad and Florida Avenue, ultimately becoming the Lakeland Manufacturing Company, one of the largest industrial firms in the city (Hetherington 1928:318). Truck farming added to the city's agricultural production during this period, while railroad trips to Tampa's Picnic Island under the auspices of a Sunday school became commonplace by the late 1890s (Hetherington 1928:93). A bicycle track around Lake Morton was considered in 1896, and the Board of Trade was created in 1897. Among its first priorities was to establish a county fair near Lake Morton to attract visitors throughout the state, which was first held in 1898. It featured a grandstand with seating for 1,500, a bicycle track, and buildings to house displays, as well as baseball games and bicycle races. Featured orators such as Frank Clark and Jefferson B. Browne spoke at the fair, which hosted railroad owner and shipping magnate Henry Bradley Plant as its honored guest and earned a net profit of \$320 (Hetherington 1928:29).

While its high school was lost to fire that year, the outbreak of the Spanish American War brought over 6,000 troops to Lakeland in May 1898 in preparation for their departure to Cuba. A considerable number were reported to have been African American, which led to one of the earliest incidents of racial violence in Lakeland's history. It is recorded that the event began when two African American soldiers entered a local barbershop and were refused service. They exited angrily and were prompted to leave by the police but would later return to smash its windows and fire their guns in the air in protest. When a group of white men saw them, they approached the pair, at which point the Black soldiers opened fire. One man was injured, and another was killed. The two soldiers were disarmed and arrested before being transported to Tampa for safe-keeping, as racial tensions in Lakeland were reported to be "running high." A grand jury ultimately acquitted one soldier for lack of evidence, while the other was convicted and sentenced to life in prison. The African American troops were removed soon after the disturbance, and Lakeland residents were reported to have been "relieved to see them go" (Hetherington 1928:95). The white soldiers remained for a bit longer, only to depart after a shooting and a suicide (Hetherington 1928:95).

Following the military's departure, Lakeland's industrial and agricultural growth continued as the success of truck farming bolstered the local economy. Among the most successful farmers was A.J. Morgan from the small community of Winston, whose primary crop consisted of eggplant (Hetherington 1928:97). Spence Minor Stephens constructed Lakeland's first apartment complex at Lake Morton in 1900. Minor was also said to be "civic-minded," sponsoring the funding of several local roadways, including a street around Lake Hollingsworth (Hetherington 1928:336).

Telephone service connected the city with others throughout the state by 1901, the same year that the elaborate depot Munn had constructed was lost to fire. A replacement was constructed within a few weeks of its destruction, and the construction of a schoolhouse followed the passage of Lakeland's first bond issue in 1902. Another blaze claimed two blocks of the business district's frame buildings in 1904. Twenty-one businesses and homes, two hotels, three offices, and a number of outbuildings were destroyed, as the city's "bucket brigade" was no match for the fire (Hetherington 1928:99).

The Tremont Hotel was saved, but two other fires wreaked havoc on the city by year's end, again claiming several structures and businesses. Local residents questioned their suspicious nature and demanded that something be done to protect Lakeland from further destruction. "Rude shacks" in the city's park served as a temporary home for the businesses that had been displaced until the downtown area could be rebuilt with fireproof brick materials. C.E. Reed drilled the area's first municipal well in 1905 in order to provide the city with an adequate water supply, only to be followed by another fire along the south side of Main Street in 1906 (Hetherington 1928:100–101).

With the reconstruction of the business district well underway, landowner John Patterson, builder Edward Finney, and realtor John F. Cox joined together to plat the area's first major subdivision in 1906. Located between Lakes Morton and Hollingsworth, the three men capitalized on what was then considered the more desirable lands south of the city to create the "Dixieland" subdivision that year. Two others – Lakeland Heights and the Haines and Owen subdivisions – were created by the following year, and although Dixieland quickly became the "fashionable" area to construct a new home, in the next five years, almost 70 had been built in the South Lake Morton Area (Edwards 1984:11).

City council members met to rename the city's park in 1908 after its founder and the man who had donated the land for its construction, Abraham G. Munn. The Carter-Deen Realty Company and Florida-Georgia Land Company were largely responsible for the residential development of the South Lake Morton area and opted to sell their Dixieland lots at auction, with the price of lots ranging from \$130 to \$150 each. Carter-Deen then proceeded to purchase another tract that spanned west from Florida Avenue to Fifth (later Lincoln) Avenue soon after from Dr. John Patterson, nearly tripling the boundaries of the Dixieland neighborhood (Edwards and Primelles 1985:8.3). Despite these residential improvements, yet another fire ravaged the city's Main Street in 1908, eliminating what some saw as old and dilapidated buildings. Their destruction led to an increase in property values for the vacant parcels the fire created, as "records for high values in real estate" were reported soon after. A volunteer fire department followed in 1909, just as the population reached over 4,500 residents (Hetherington 1928:101).

Negotiations for the construction of a new train station began in 1910, and the Seaboard Air Line Railroad (which had replaced the Plant System) completed the structure by 1912 (Figure 3-8). The Florida-Georgia Land Company established the Orange Park Subdivision after purchasing the 13-acre Skipper's Grove Tract for \$30,000 in June of that year (Hetherington 1928:105; Edwards and Primelles 1985:8.3). A sewer system was completed by 1913, and sidewalks leading to the school along the shores of Lake Morton were also added the same year (Edwards and Primelles 1985:8.3). The city hosted nearly a dozen local newspapers, as well as two statewide religious publications – the *Florida Christian Advocate* and the *Florida Baptist Witness* (Mr. Zebendon in Town 1903). Its communication service, the Lakeland Telephone Exchange, was also key to the area's growth, employing as many as eight operators at the time (Hetherington 1928:105).

Figure 3-8. Photograph of Seaboard Air Line Railroad train depot, completed in 1912 (Image courtesy of State Library and Archives of Florida, Florida Memory, General Collection, N033940).

Residential growth continued in the years prior to World War I, as nearly 50 new homes were constructed along Success Avenue (Figure 3-9) and South Boulevard, and the availability of less expensive lots led to the construction of others on Tennessee Avenue and Riggins Street. A number of additional homes were also spread throughout isolated sites on Orange Park Avenue, Finney Street, Johnson Avenue, Mississippi Avenue, Palmetto Street, and Phillips (now College) Avenue. Perhaps a sign of the changing nature of American society or the local economy, many of these homes were far less decorative and ornate than those built in the 1900s. Vernacular, wood-frame structures replaced the earlier, Victorian homes, with bungalow-style residences being constructed for the first time (Edwards and Primelles 1985:7.3).

Local officials purchased a site on the shores of Lake Morton for a school (Figure 3-10) in 1913 after passing a bond to fund its construction. Lakeland shifted from an alderman-type of local government to the commissioner system at this time, just as the Hotel Kibler (later Hotel Thelma) was completed. J.L. Skipper resigned as postmaster at that time, having served the local community for 16 years (Hetherington 1928:106).

Figure 3-9. Postcard featuring hand-colored photograph of Success Avenue overlooking Lake Morton (Image courtesy of State Library and Archives of Florida, Florida Memory, Postcard Collection, PC12410).

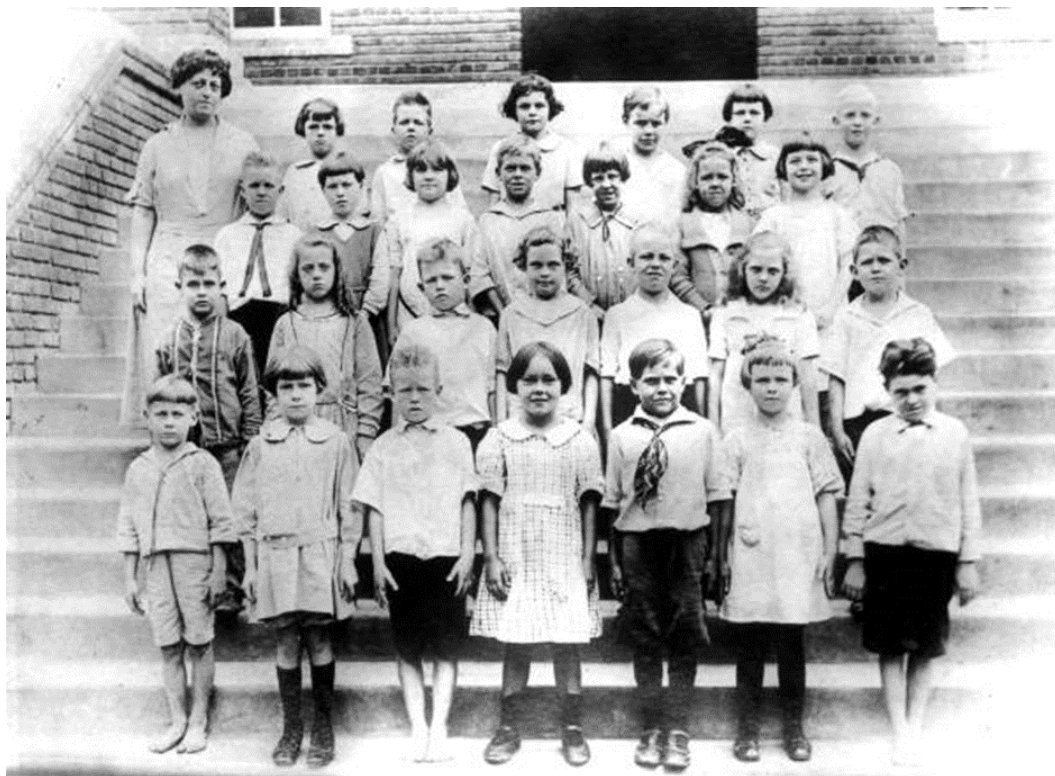

Figure 3-10. Portrait of Lake Morton Elementary School teacher and students standing in front of the facility, circa 1922. Note the building's brick construction (Image courtesy of State Library and Archives of Florida, Florida Memory, Reference Collection, RC18235A).

With the outbreak of World War I, the residential development of Lakeland came nearly to a standstill. The road surrounding Lake Morton was paved with asphalt in 1918, leading to the construction of a number of additional homes along its shore soon after (Hetherington 1928:111). One of the greatest changes to the city's landscape came three years later, when a Methodist seminary purchased 67 acres of former grove lands for use as a college campus in 1921. Dr. Ludd Spivey assumed the presidency of Florida Southern College in 1925, and by the late 1930s, envisioned a "campus of tomorrow." He retained famed architect Frank Lloyd Wright to design the campus soon after and by 1938 he arrived to survey the site. Wright evaluated the 80-foot rolling hill that bordered Lake Hollingsworth covered mostly by citrus. He then returned to his studio, where he designed over 18 buildings for the campus. The construction of the first five buildings was completed largely by the school's all-female student body during World War II, and they were later linked to 13 others by the longest covered walkway of Wright's career. Construction continued throughout the 1950s, as the 18 "unique and distinctive buildings" were praised for their design and later listed in the NRHP in 1975 (Frank Lloyd Wright History at Florida Southern College n.d.).

A 1944 7.5' Quadrangle topographic map of Lakeland (Figure 3-11) highlights the location of Florida Southern College in proximity to Lakes Wire, Beulah, Hunter, Mirror, Morton, Hollingsworth, and Bonny, as well as the South Lake Morton and East Lake Morton Historic Districts. The street grid for the two districts and other adjacent subdivisions can be seen, with countless homes, a few schools, and numerous churches shown, including three churches within the boundaries of the South Lake Morton Historic District. A small portion of a railroad terminal and line is visible northeast of the survey areas, to the north of Lakes Beulah and Lake Mirror (Mirror Lake). The Atlantic Coast Line Railroad intersects it to the east of Lake Mirror, leading southeast with a radio tower to its west (United States Geological Service 1944).

With a population of approximately 7,000, Lakeland struggled with prohibition and curfews for the remainder of the decade in hopes of maintaining its moral character, but the Florida Land Boom would bring unprecedented growth by the mid-1920s (Figure 3-12). From 1920 to 1924, its population more than doubled to more than 16,500 as subdivisions quickly "sprang up" around Lakeland (Edwards and Primelles 1985:8.5; Wolney 1984). The South Lake Morton area added nearly 200 new homes to its landscape by 1922, and by the decade's end, a total of 548 new residential structures were built in its vicinity (Edwards and Primelles 1985:8.6). The Wilsonian Apartments were also built adjacent to Lake Morton at this time, and the city was said to be "building a house every day" (Hetherington 1928:112). A sanitarium (hospital) was established along the shore of Lake Morton, which was overseen by Dr. M. Grace Blackman Hanna. She was said to have "carved herself a career of usefulness, helpfulness and inspiration" to all those that were in contact with her (Hetherington 1928:252–252).

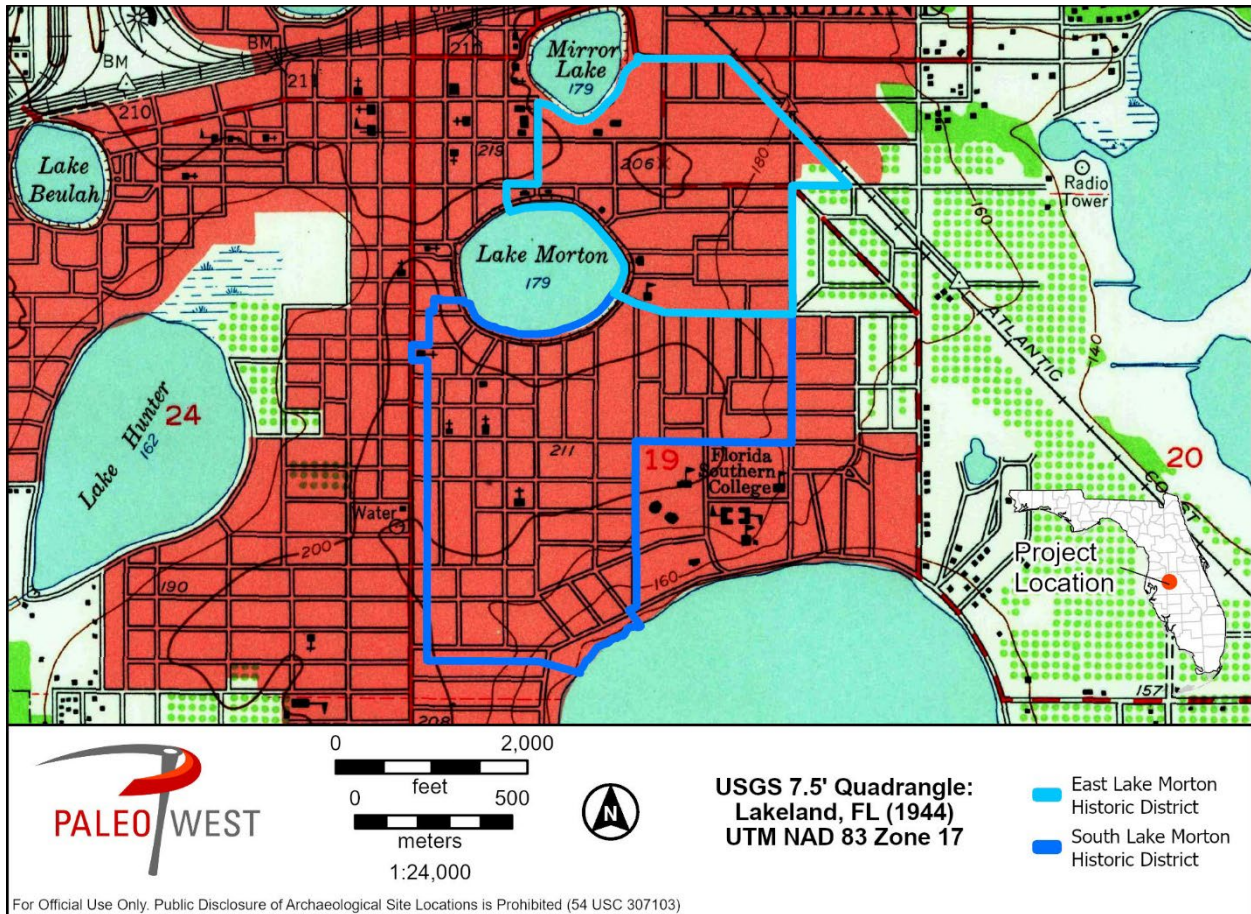

Figure 3-11. Historical 1944 topographic map with historic district boundaries overlain (USGS 1944).

Building upon these successes, residents approved a record \$1.09 million bond that year so that several improvements could be made to the city. Among these was the construction of a new city hall, a library, a new civic center (Figure 3-13), and a promenade overlooking Lake Mirror. The local Women's Club purchased property on Lake Morton for \$4,000 in 1923 and constructed a clubhouse there in 1927 at a cost of \$13,000 (Hetherington 1928:119). The clubhouse and the majority of these improvements were completed by the time the boom ended in 1928, but another downtown fire and powerful hurricane that year combined with the economic effects of the Great Depression sent real estate values plummeting by the early 1930s (Wolney 1984).

Local resident and grocer Albert O. Jackson recalled the city's "rough times," and despite its financial setbacks and natural disasters, Lakeland became Florida's largest city by the time the boom ended (Wolney 1984). The 1930s to early 1940s marked a period of relatively little growth. However, once the United States entered World War II Lakeland's economy slowly recovered. Drane Field, named for the honorable judge Herbert J. Drane, opened as a temporary training site for the U.S. Air Force's 320<sup>th</sup> Bombardment group, and between 1,000 and 1,500 B-26 Marauder pilots were stationed there during the war. The facility was once described as "quite primitive," and "sizzling heat, tarpaper shacks, and outdoor latrines" were among its most defining features, according to former pilot and serviceman, James Carraher (Wolney 1984).

Lake Morton and its adjacent subdivisions can be seen at center, between Lakes Mirror and Hollingsworth (Image courtesy of State Library and Archives of Florida, Florida Memory, Florida Map Collection, FMC0131).

Figure 3-13. Postcard with hand-colored photograph of Civic Center overlooking Lake Mirror, circa 1938 (Image courtesy of State Library and Archives of Florida, Florida Memory, Postcard Collection, PC07805).

Downtown Lakeland was far more inviting. Carraher was one of many Air Force personnel who stayed at the terrace hotel to escape what were often brutal conditions at Drane Field. Despite its remarkable growth, Lakeland remained a dry town, the only alcoholic beverages available were sold by the local Elks Lodge across the street from the Terrace Hotel. Drane Field was complimented by another training facility, Lodwick Field, which also played an important role in the city's development during World War II. It opened as a civilian-operated flight school after pilot, Albert Lodwick relocated the facility from Nebraska in 1941. Lodwick trained over 8,000 British and American cadets at the facility before it was returned to civilian use and converted to Joker Marchant Stadium (Wolney 1984).

Lakeland remained a relatively quiet and peaceful small town during the immediate Post-war era. However, by the 1960s, officials and business leaders joined together in hopes of managing its growth (Figure 3-14). It began with a chamber of commerce initiative in 1966, which soon attracted businesses such as the area's highly successful Watson Clinic diagnostic center and ultimately led to several other improvements throughout the city. Among these was a convention center which could seat nearly 15,000 guests. An old auditorium was demolished to make way for a small park and the downtown was "revamped" to meet the changing needs of its residents by the mid-1970s (Hamilton 1972). The Polk County Historical Association and Historic Lakeland, Incorporated were both contacted in hopes of gaining the perspective of a local informant, but neither organization was able to provide any information prior to the completion of the Developmental and Historical Context (Contact Us n.d.; Contact Historic Lakeland, Inc. 2022).

Figure 3-14. Aerial view of Lakeland, facing west with Lake Mirror in the foreground, Lake Moron to the left, and Lakes Wire, Beulah, and Bonnet in the distance, circa 1960 (Image courtesy of State Library and Archives of Florida, Florida Memory, Reference Collection, RC13171).

A historical 1968 aerial photograph (Figure 3-15) highlights the development of the area surrounding the South Lake Morton and East Lake Morton Historic Districts in the late twentieth century. The civic center and other improvements surrounding Lake Mirror can be seen around its shore, forming a section of the boundaries of both historic districts. A railroad line that connects with what appears to be a portion of a railyard, traverses northwest to the north of Lakes Wire and Mirror and intersects with a number of local roadways, such as Florida Avenue and Hollingsworth Road, which form portions of the boundaries of the two historic districts. Another rail line leading northwest lies to the east of Hollingsworth Drive at the top right of the frame. A school campus with a track is adjacent to its west, and the area to its east consists largely of citrus groves intermixed with residential housing. One small area adjacent to Lake Bonny is mostly undeveloped, aside from two nearby structures. Only a small portion of the wooded area documented in the original 1850 land survey is shown, although the homesite appears to still be in place (United States Department of Agriculture 1968).

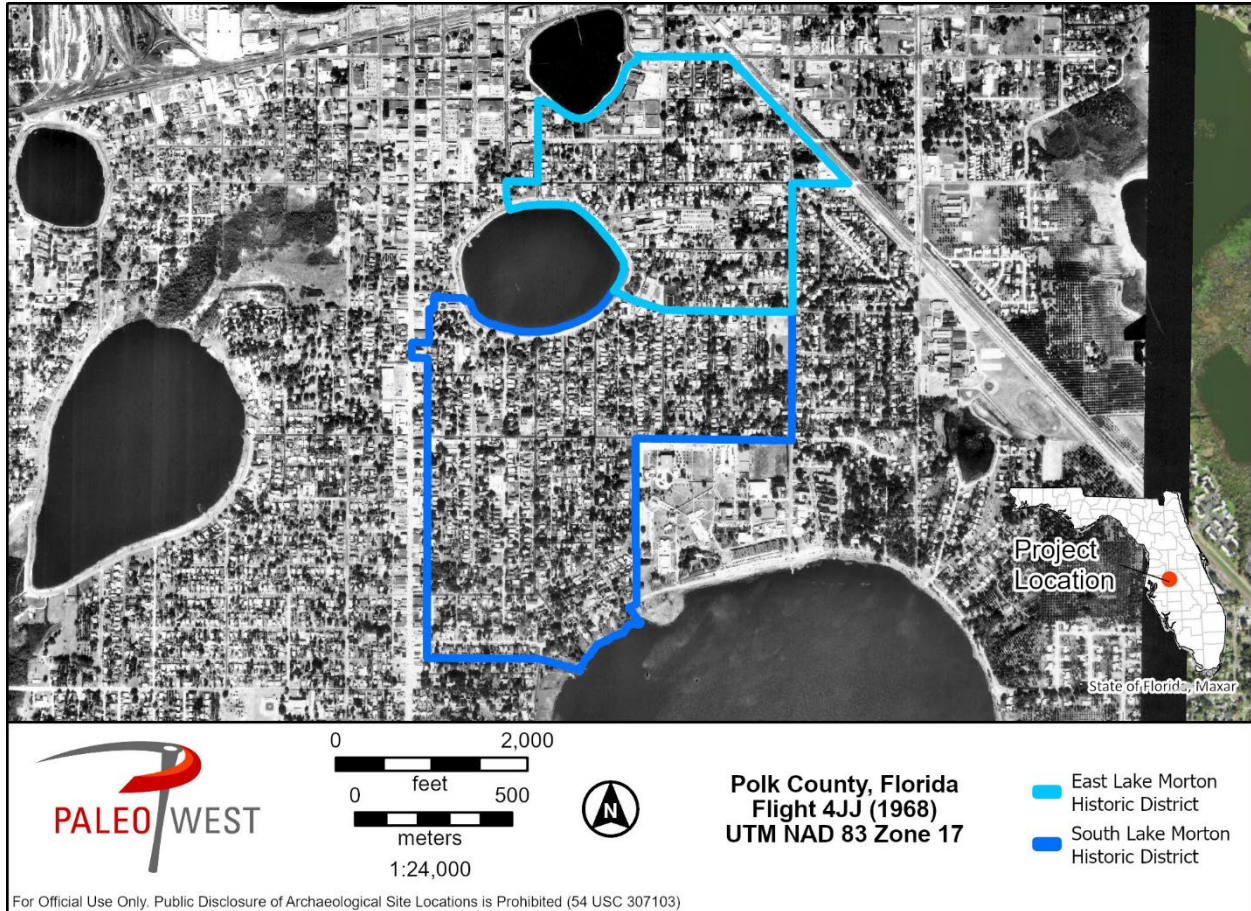

Figure 3-15. Historical 1968 aerial photograph with historic district boundaries overlain (USDA 1968).

### 3.3 PREVIOUS RESEARCH

PaleoWest examined records in the FMSF to determine the location of any previously conducted cultural resource surveys or previously recorded components of the historical built environment within 0.08 kilometers (km) (0.5 miles [mi]) of the Project survey areas (Figure 3-18). Eighteen cultural resource surveys have been conducted within the site file search areas between 1984 to 2017. Of these 18 previous cultural resources surveys, five are built environment surveys (FMSF Manuscript Numbers 1011, 2987, 3165, 3582, and 4027); three are archaeological surveys (FMSF Manuscript Numbers 5048, 5828, and 12100); eight are combination surveys that include both archaeological and built environment data (FMSF Manuscript Numbers 2733, 3713, 4142, 4859, 5615, 6703, 13046, and 25855); and two are uncategorized (FMSF Manuscript Numbers 16009 and 17877). Seven of the 18 surveys within the site file search are within or partially overlap the Project survey areas (Table 3-1).

Two previous cultural resources surveys are of particular relevance to the current Project: FMSF Manuscript Numbers 1011 and 3165. FMSF Manuscript Number 1011, *Proposed South Lake Morton Historic District*, was undertaken by The Stewart Corporation Architects in 1984 on behalf of Historic Lakeland, Inc. The survey had four primary goals: (1) survey and inventory the South Lake Morton neighborhood; (2) prepare an NRHP nomination for the proposed South Lake Morton Historic District; (3) develop recommendations for preservation actions; and (4)

create a local ordinance historic district with accompanying design guidelines. The survey covered the approximately 250-acre neighborhood and documented 565 potentially contributing buildings constructed prior to World War II. Following the completion of the survey, an NRHP nomination for the South Lake Morton Historic District (PO01011) was prepared, and the resource group was listed in the NRHP the following year.

FMSF Manuscript Number 3165, *East Lake Morton and Citywide Resource Surveys of Lakeland, Florida*, was undertaken by Historic Properties Association Inc. in 1992 on behalf of the City of Lakeland. This survey documented all historic age buildings, which was at the time of survey, those constructed in 1942 or earlier in the East Lake Morton neighborhood and performed a windshield survey of historic resources in the remainder of the city. Ultimately, 170 historic buildings were documented, and the report encouraged the City of Lakeland to hold additional meetings concerning the East Lake Morton Historic District to enact a preservation ordinance for the East Lake Morton area, to pursue additional intensive surveys in the remainder of the city, and to develop a historical marker program. Following the completion of the survey, the East Lake Morton Residential Historic District (PO03774) was prepared and listed in the NRHP the following year.

There are ten previously recorded resource groups, one historical cemetery, and no historical bridges in the site file search area (Table 3-2). The previously recorded historical cemetery is not within the Project survey areas, nor does it overlap them. Of the previously recorded resource groups in the site file search area, seven are within or overlap the Project survey area. The survey areas are composed of resource groups PO01011 and PO03774, the South Lake Morton Historic District and East Lake Morton Historic District, and resource group PO05298, the Northern Extension of the East Lake Morton Historic District.

As discussed above, resource group PO01011 was documented in 1984 and listed in the NRHP the following year on November 11, 1985. The South Lake Morton Historic District was listed in the NRHP under Criterion C in the architecture area of significance with a period of significance from 1904 to 1935. The district includes 565 contributing buildings and 195 non-contributing buildings. The district is significant for its high concentration of Bungalow form buildings constructed between 1918 and 1935 and its smaller representative era (1890–1918) buildings. Although the district was not listed under Criterion A, its statement of significance states it is also significant for its association with the development of Lakeland during the Florida Land Boom and the many local economic and political leaders that resided in the district.

Resource group PO03774 was documented in 1992 and listed in the NRHP the following year on July 9, 1993. The East Lake Morton Residential District (locally designated as the East Lake Morton History District) was listed in the NRHP under Criteria A and C in the architecture and community planning and development areas of significance, with a period of significance from 1900 to 1940. The district includes 215 contributing buildings and 81 non-contributing buildings. The district is significant as one of Lakeland's earliest residential neighborhoods and is representative of middle-class housing during the first half of the twentieth century. The district also exemplifies the typical developmental pattern of Florida's residential subdivisions, as piecemeal individual plats, as opposed to large, planned subdivisions.

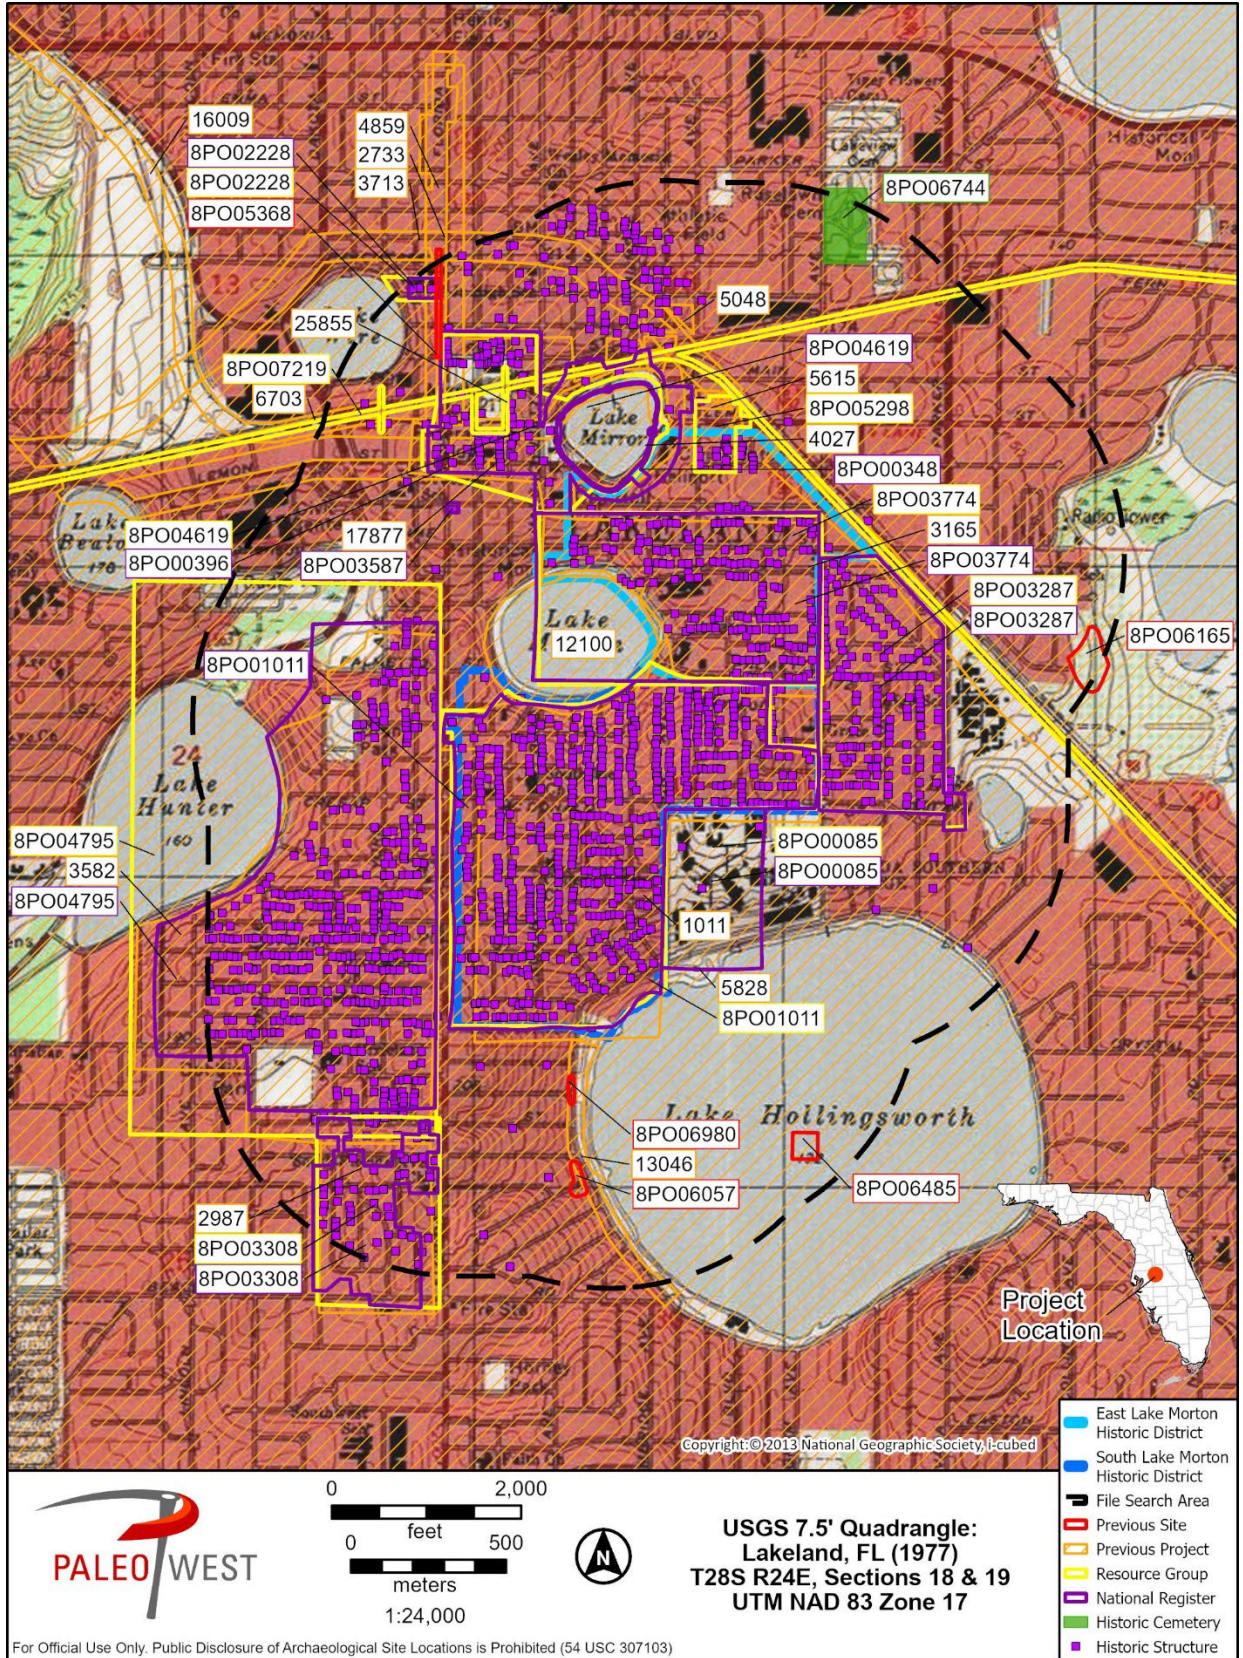

Figure 3-16. Site file search overview of previously recorded resources within 0.08 km (0.5 mi) of the Project survey areas.

\*Shaded rows indicate surveys that are within or overlap the Project survey areas.

Resource Group PO05298, Northern Extension of the East Lake Morton Historic District, was documented in 1994 as a proposed expansion to the NRHP-listed East Lake Morton Residential District. The resource group consists of 45 contributing buildings and 11 non-contributing buildings. The proposed expansion is approximately 12.6 acres and is north of Orange Street, south of East Main Street, west of US Highway 98, and east of Lake Avenue. The FMSF indicates an NRHP nomination form was completed to add this proposed extension to the East Lake Morton Residential District. However, the extension was not added to the NRHP-listed district, and the resource group is listed in the FMSF as unevaluated by the SHPO.

Three resource groups (PO00085, PO03287, and PO04619) border the Project survey areas. PO00085, Florida Southern College Architectural District, was documented in 1974 and was listed in the NRHP on June 11, 1975. The district was listed under Criterion C in the architecture area of significance, with a period of significance from 1937 to 1955. It contains seven contributing buildings designed by Frank Lloyd Wright for Florida Southern College. The district is significant as its buildings differ considerably from Wright's other designs, and the larger campus plan designed by Wright is the only extant expression of his planning concepts. On March 6, 2012, the resource group was designated as a National Historic Landmark, with a period of significance from 1938 to 1958. The Florida Southern College Architectural District borders the South Lake Morton Historic District along Frank Lloyd Wright Way (previously McDonald Street) and Johnson Avenue.

Resource group PO03287, Cumberland Historic District, borders both the East and South Lake Morton Historic Districts along South Ingraham Avenue. The Cumberland Historic District was documented in 2003 and listed in the NRHP as the Biltmore-Cumberland Historic District on June 4, 2004. The district contains 201 contributing buildings and 77 non-contributing buildings. It was listed under Criteria A and C in the community planning and development, and architecture areas of significance with a period of significance from 1922 to 1953. The district is

locally significant for its embodiment of development during the Florida Land Boom and the resumption of construction during the Post-war Period.

Resource group PO04619, Munn Park Historic District, was documented in 1982 and 1997 and borders the East Lake Morton Historic District along S Massachusetts Avenue and the promenade along Lake Mirror. The Munn Park Historic District was listed in the NRHP on November 11, 1997, with 51 contributing resources and 28 non-contributing resources. It was nominated under Criteria A and C in the community planning and development, commerce, and architecture areas of significance with a period of significance from 1884 to 1946. The district is significant to the commercial development of Lakeland, and its architecture is representative of regional and national trends in building design and construction from the late nineteenth century through the mid-twentieth century.

\*Shaded rows indicate previously recorded resources that are within or overlap the survey areas.

Eleven NRHP-listed resources are found within the site file search area, six of which are found within or overlapping a portion of the Project survey areas (Table 3-3). Five of these NRHP-listed resources, PO00085, PO01011, PO03287, PO03774, and PO04619, are discussed in the previous section. PO00348, Lake Mirror Promenade, was listed in the NRHP on January 27, 1983, under Criteria A and C in the architecture, community planning and development, engineering, landscape architecture, and politics/government areas of significance with no specified period of significance. The promenade, which encircles Lake Mirror, was constructed in 1928 and is regarded as one of the most significant examples of the City Beautiful Movement in Florida. It was designed by Charles Wellford Leavitt in the Neoclassical style and

includes several areas of interest, including the Dixie Highway Boat Landing, the Loggia, and the South Boat Landing.

\*Shaded rows indicate previously recorded resources that are within or overlap the survey areas.

According to the FMSF, there are 1,650 previously recorded historic structures located within the site file search area, 774 of which are within the current Project survey areas (Table 3-4). Most (96%) of the previously recorded historic structures are categorized as private residences, with just 5.2 percent categorized as apartments, 1.6 percent categorized as duplexes, and the remaining percentage categorized as commercial, houses of worship, lodges/clubs, a library, and a pavilion. Five hundred and twenty-one of the 774 historic structures in the Project survey area are not listed in the FMSF with an architectural style. However, their associated scanned survey forms do designate styles. Of the historic structures listed in the FMSF with a designated style, the majority are categorized as Bungalows (46.4%), followed by Frame Vernacular (40%), Mediterranean Revival (4.7%), Masonry Vernacular (3.2%), Craftsman (2%), and Georgian Revival (1.6%). The remaining approximately two percent of historical structures with designated styles are categorized as Queen Anne, Neo-Classical Revival, Italian Renaissance Revival, and Tudor Revival. Nearly all of the previously recorded historic structures (96.6%) in the Project survey areas are listed in the FMSF as unevaluated from SHPO. Of the remaining historic structures, 25 were determined not eligible for the NRHP by SHPO, one was determined to have insufficient information (PO00954), and one was determined eligible for the NRHP (PO00496). Although PO00496 is listed in the FMSF as determined eligible for the NRHP by SHPO on January 5, 2005, the resource’s associated scanned form includes no determination of eligibility, there are no determined historically significant associations, and the building is a typical Bungalow type residence.

## CHAPTER 4. ARCHITECTURAL CONTEXT

Historical buildings in the East and South Lake Morton Historic Districts consist of common architectural styles with some regional variability affected by materials, design type, environment, and/or functionality. Within the East Lake Morton Historic District, the earliest built resources consist of residential buildings with a few multi-family residences. Most of these buildings are vernacular in style, with a lesser number representing popular early twentieth-century high styles, such as Mediterranean Revival, Neoclassical Revival, Prairie, and Queen Anne. Bungalow residences were particularly popular in East Lake Morton throughout the first half of the twentieth century, as well as Craftsman style residences. Buildings dating to World War II through the contemporary periods in East Lake Morton reflect more varied uses, particularly increased multi-family residences. Buildings from these periods reflect changing architectural and building trends, with a larger concentration of Masonry Vernacular and Ranch style buildings. These same architectural trends are evident in the South Lake Morton Historic District. However, South Lake Morton has a concentration of larger, high-style homes along Success Avenue, a north-south artery in the center of the district. The various architectural styles described below include those documents with the East and South Lake Morton Historic Districts (Table 4-1; Figure 4-1 and Figure 4-2).

**Table 4-1. Total Numbers of Architectural Styles Surveyed**

<b>Architectural Style*</b>	<b>East Lake Morton</b>	<b>South Lake Morton</b>	<b>Total</b>
American Foursquare	0	7	7
Bungalow	69	153	222
Collegiate Gothic	0	1	1
Colonial Revival	2	5	7

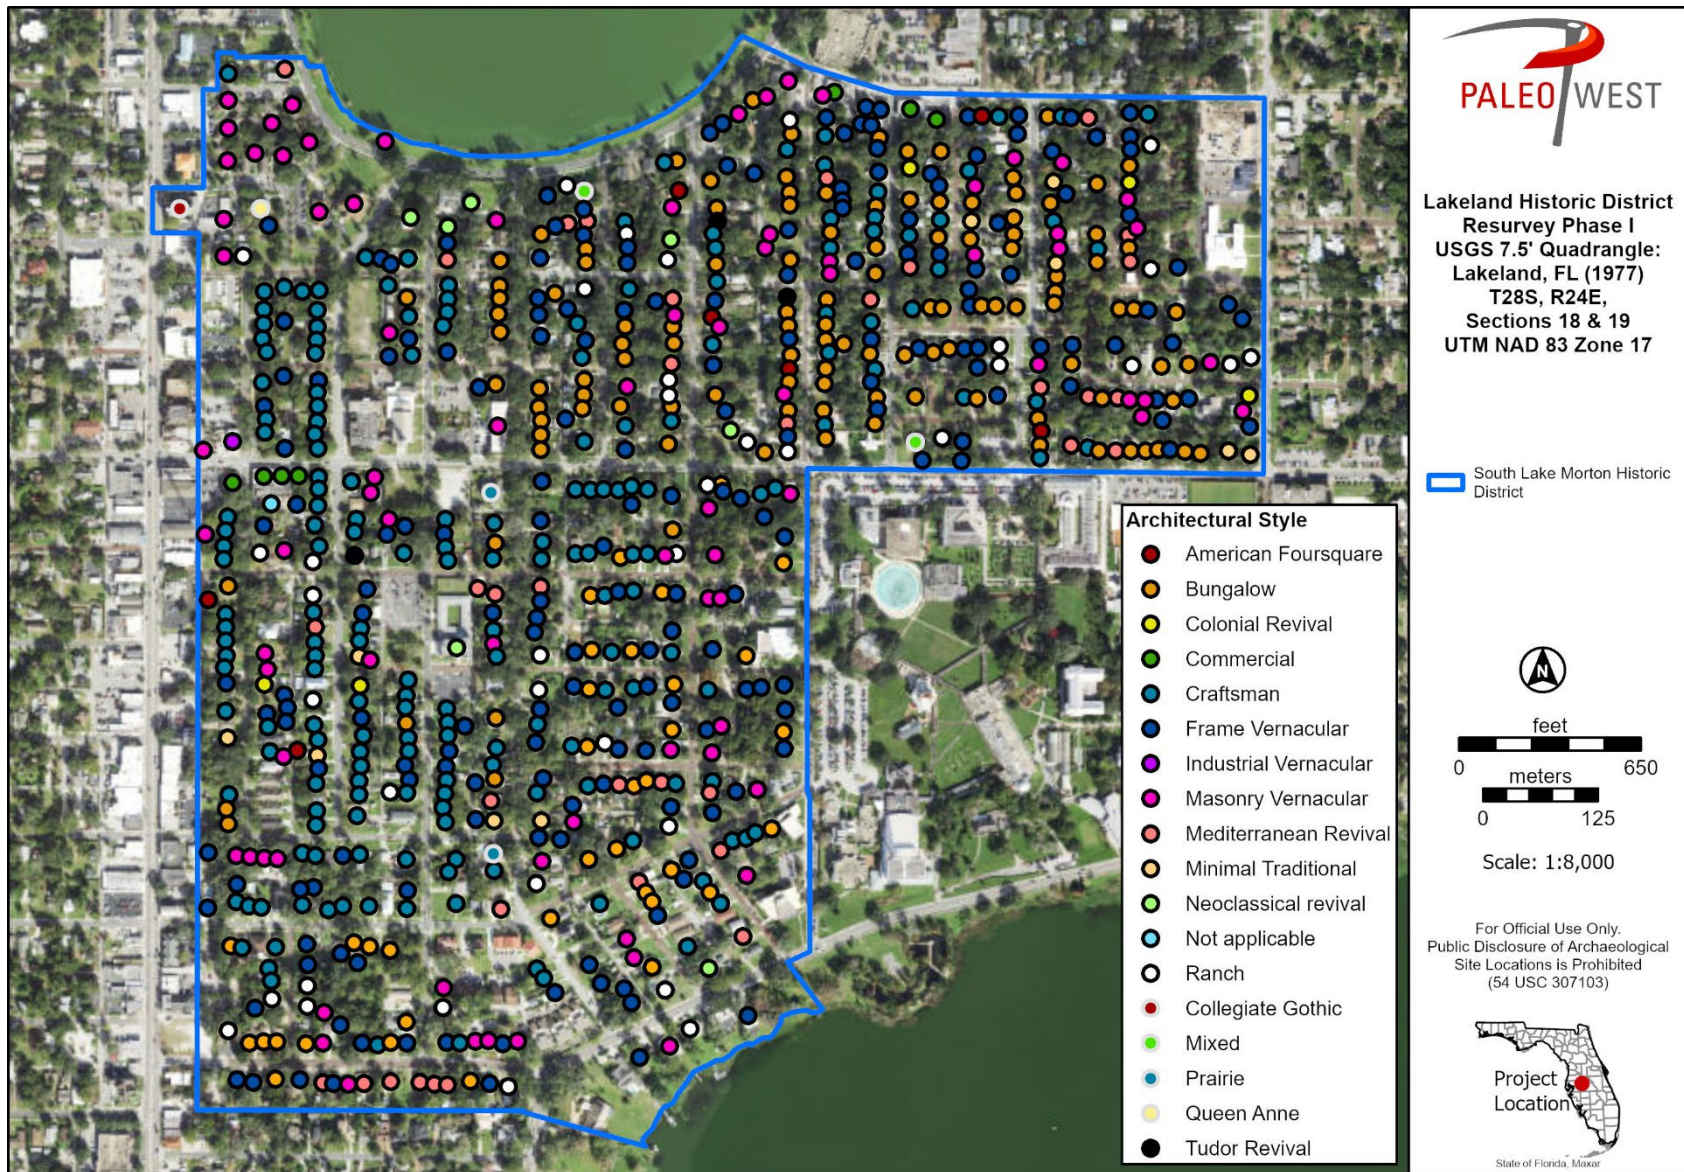

Figure 4-2. Aerial results map depicting the architectural style of resources surveyed in the South Lake Morton Historic District.

## 4.1 AMERICAN FOURSQUARE (1890–1930)

The American Foursquare, historically referred to as the square or box house, is a vernacular architectural type that was popular throughout the United States during the early twentieth century. The home rose in popularity alongside Bungalow type and Colonial Revival style residences during a period when popular architectural trends moved away from “highly regimented Victorian plans” (Montgomery 2018:48). The residential building type was characterized by its simple, square, two-story exterior massing, often with a hip roof and full-width porch (Figure 4-3). The interior of the foursquare was commonly comprised of four main spaces on each floor, with a circular pattern of egress between living spaces. The home’s simplicity in exterior form and interior plan made it highly adaptable to an individual’s aesthetics and budget, but it was most commonly a middle-class building form. The foursquare’s massing also made it highly suitable for the streetcar suburbs that developed in the early twentieth century. Row houses, another popular vernacular architectural type, could not be constructed contiguously on the narrow lots frequently plotted in streetcar suburbs. Similarly, wide, sprawling homes were too large to develop on a singular lot. The foursquare, with its square, two-story massing, could easily fit within a small suburban lot while providing additional square footage on its second story (Montgomery 2018).

Figure 4-3. An American Foursquare style residence at 810 S Mississippi Avenue (P000694) in the South Lake Morton Historic District.

## 4.2 BUNGALOW (1890–1930)

The Bungalow is a vernacular architectural type that was most popular in the United States between 1900 and 1920. Characterized by their small size, one-to-one-and-one-half story height, and prominent front porches, Bungalows were a predominantly working-class architectural type (Figure 4-4). At a modest cost, the small and practical homes of the Bungalow type offered simplicity and quality construction. During a period of intense development and population boom, the Bungalow addressed the housing needs of Americans. The Bungalow's roots are often disputed, but most scholars trace the architectural type to Bengal province, India. A vernacular housing type predominated there, defined by its one-story height, thatched roof, and open porch. During their colonization of India, the British adapted this building type, and by the late nineteenth century, the type had found its way to the East Coast of the United States. The form quickly gained popularity in the east and soon spread to the West Coast, where it became popularized as the Craftsman Bungalow. In this form, Craftsman characteristics were applied to the Bungalow type, resulting in a more ornate home that was frequently constructed in Western suburbs and cities. The Bungalow gave way to newer architectural styles and types by the 1930s, and it became associated with rural, small-town communities. Today, several subtypes of the Bungalow are recognized, characterized by roof type: the side gable, hipped, front-facing gable, double-front gable, triple-front gable, and cross-gable. These various subtypes retain the basic Bungalow tenets of small size, one-to-one-and-one-half story height, and porches, including partial width, full width, and recessed (Bungalow 2016). The Bungalow type, and its subtypes, are common throughout East and South Lake Morton, as well as the more stylized Craftsman Bungalow, reflecting Lakeland's development during the early twentieth century.

Figure 4-4. A Bungalow type residence at 840 E Walnut Street (P003514) in the East Lake Morton Historic District.

### 4.3 COLLEGIATE GOTHIC (1840–1880, 1910–1950)

Gothic Revival is an architectural movement that began in the late 1740s in England. Its momentum grew in the early nineteenth century when increasingly serious and learned admirers of Neo-Gothic styles sought to revive medieval Gothic architecture, in contrast to the Neoclassical styles prevalent at the time. Gothic Revival draws features from the original Gothic style, including decorative patterns, finials, lancet windows, hood molds, battlements, and label stops. By the mid-nineteenth century, it was established as the preeminent architectural style in the Western world (Editors of the Encyclopaedia Britannica n.d.). Roofs of the Gothic Revival Style are typically steeply pitched and cross-gabled, and often feature decorative vergeboards. Windows are often pointed or contain some sort of arched detailing, reminiscent of the windows of Gothic style churches. The front porch itself will often contain subdued or “flattened” arches and decorative wood detailing. Floor plans were typically symmetrical in Gothic Revival Style buildings until the 1840s when the rise of the Romantic era gave way to picturesque (unpredictable and asymmetrical) design (Charlesworth 2002). Although its popularity waned in the late nineteenth century for residential applications, Gothic Revival remained prevalent.

Collegiate Gothic style is an adaptation of the early Gothic Revival style specifically employed in the construction of educational resources, most often colleges and secondary schools. This second iteration of the style arose in the early twentieth century and persisted until the mid-twentieth century. Educational Collegiate Gothic styles often feature flat roofs with decorative or stepped parapets, Gothic arched entries, central towers and bay windows, and stone tracery (Figure 4-5) (Collegiate Gothic 2014).

Figure 4-5. A Collegiate Gothic House of Worship at 730 S Florida Avenue (Westminster Presbyterian Church, P000562) in the South Lake Morton Historic District.

## 4.4 COLONIAL REVIVAL (1880–1940)

Colonial Revival style was the dominant domestic architectural style in the United States during the first half of the twentieth century, peaking between 1910 and 1930. In the Post-war Period, Colonial Revival style was still constructed through the 1960s, although in a less elaborate fashion. The style's rise to popularity in the early twentieth century symbolized a resurging interest in the early English and Dutch homes constructed along the Atlantic Coast. Common features of the Colonial Revival style include accentuated front doors, often with projected pediments and fanlights or sidelights, symmetrical fenestration with a centered entry, and double-hung windows with multiple lights, most often in pairs. There are nine subtypes of the style: asymmetrical, hipped roof with a full-width porch, hipped roof without a full-width porch (Figure 4-6), side-gabled, centered gable, gambrel roof, second-story overhang, one-story, three-story, and built-in garage. The most common subtypes are the side-gabled and hipped-roof, with and without full-width porch. The one-story subtype, also called a Cape Cod based on houses common to Massachusetts, was popular in the 1940s. Post-1940, built-in garages became common features and persisted until the 1980s (McAlester 2015:409–432).

Figure 4-6. A Colonial Revival style residence at 700 E Walnut Street (William Groover House, P003417) in the East Lake Morton Historic District.

## 4.5 COMMERCIAL

The term Commercial style or Commercial Vernacular style may be used to describe a building with commercial use that lacks a defined style. Commercial Vernacular architectural style reflects utilitarianism; the form of the building follows its function. However, vernacular commercial buildings can be found in a wide variety of types. These types include two- and one-part commercial block, enframed window walls, stacked vertical block, two- and three-part vertical block, temple front, vault, enframed block, central block with wings, and arcaded blocks, as well as combinations of types. Commonly, smaller vernacular commercial buildings are of the two-part commercial block type. This type is characterized by a horizontal division of two distinct zones and is typically between two to four stories tall. The first story has a commercial use, while the upper stories are reserved for private spaces. The one-part commercial block is comprised of only the first commercial story of the two-part commercial block (Figure 4-7). The enframed window wall type is common to small- or moderate-sized commercial buildings and is characterized by an enframed center section of windows. Buildings of five or more stories with three horizontal divisions are of the stacked vertical block type, while two- and three-part vertical block commercial buildings are characterized by two or three distinct horizontal divisions, respectively, on buildings of four or more stories. Temple front and vault type commercial buildings are characterized by their use of full-height classical columns and a large vault-like opening, respectively. Classical columns are also often employed in the enframed block type, which differs from the temple front type with the addition of end bays that frame the building's façade. The central block with wings type further accentuates the building's façade with subordinate flanking wings. Arcaded blocks, designed primarily for banks and large retail stores, feature evenly spaced large round-arched openings (Longstreth 2000). Often, vernacular commercial buildings reflect regional building materials and traditions and are typical of early commercial districts.

Figure 4-7. A Commercial style building at 201-209 Frank Lloyd Wright Way (P000637) in the South Lake Morton Historic District.

## 4.6 CRAFTSMAN (1900–1930)

The American Craftsman style is inspired directly by the Arts and Crafts Movement, which began at the end of the nineteenth century. This movement included an aesthetic that often carried over into the interior design, landscaping, and decorative qualities of a building. It was a style that was intended to be “non-elitist” and would “embody the values of handiwork and pleasure of labor” (Craig 2010). Although there are several variances of the Craftsman style, including earlier examples of layman design and techniques, the variant that became most ubiquitous with the style was the California Bungalow. Building plans are rectangular or L-shaped under low-pitched gable, cross-gable, or hipped roofs with features that include exposed rafter-tails, knee-braces, dormers, and/or jerkinhead gable peaks and full front porches under the primary or secondary roof line (Figure 4-8). These full-front porches feature corner posts or battered posts and are mostly set on brick or masonry piers or a stem wall foundation. Siding was originally most commonly clapboard or wood siding; in recent decades, materials have also come to include vinyl siding, asbestos tile, stucco, or other more recent construction materials (Craig 2010).

Craftsman style homes are often interchangeably identified as “Bungalow style” homes; however, Craftsman refers directly to the style of the building, whereas Bungalow refers directly to the building type. Therefore, a building may be a Craftsman Bungalow because it is a Craftsman style home with Bungalow type. A building can also possess Craftsman style without having a Bungalow type and vice versa.

Figure 4-8. A Craftsman style residence at 823 S Orange Park Avenue (KL McKay House, P000743) in the South Lake Morton Historic District.

## 4.7 FRAME VERNACULAR

Frame Vernacular is the dominant architectural style in many residential areas throughout the nation, including the City of Lakeland and its various communities. This stylistic description applies to common wood-frame or masonry-frame construction techniques by lay or self-taught builders. The style uses available resources and is responsive to the local environment. Common features of the Frame Vernacular style include, but are not limited to, a gable or hip roof, horizontal board siding (such as weatherboard or novelty construction materials), front porches with a separate or secondary roof structure, symmetrical window patterns, and minor detailing or ornamentation such as exposed rafter-tails, corner board, or porch brackets (Figure 4-9). One of the earliest and most recognized Frame Vernacular building typologies in Florida is referred to as Florida Cracker. Florida Cracker-type buildings date to the nineteenth century and were constructed with the harsh Florida environment in mind. Characteristics, including raised foundations, large porches, high ceilings, and large windows, helped cool the building's interiors. These homes were often constructed of locally sourced pine or cypress and were unpainted. Another popular nineteenth-century Frame Vernacular typology was the Shotgun home. This small house, named for its long and narrow plan consisting of one room wide and several rooms deep, was common in lower-income areas due to its affordable construction. Other Frame Vernacular typologies of the nineteenth century include single- and double-pen, saddlebag, hall-and-parlor I-house, gable-front house, and gabled-ell house. Early twentieth-century Frame Vernacular building types include pyramidal, American Foursquare, and the American small house. In the twentieth century, Frame Vernacular typologies were often constructed with design elements influenced by popular styles, such as Craftsman, through the addition of exposed rafter tails or wide roof eaves. The Great Depression and War years resulted in more modest Frame Vernacular buildings with very few decorative elements, such as the American small house. By the 1950s, the common wood frame style began to be replaced by cheaper and longer-lasting masonry materials such as concrete block (Upton and Vlach 1986).

Figure 4-9. A Frame Vernacular style residence at 824 Osceola Street (P003456) in the East Lake Morton Historic District.

## 4.8 INDUSTRIAL VERNACULAR

Industrial Vernacular characterizes buildings and structures constructed specifically for commercial or industrial use across all regions of the United States. There are no other building types that are so varied in massing, building material, size, or style than industrial structures. The most common types of Industrial Vernacular style structures are warehouses, usually constructed of sheet metal or corrugated metal exteriors with metal or wood frames, and factories of steel, wood, or poured reinforced concrete construction (Figure 4-10). By the late nineteenth century, construction methods had evolved to allow the use of steel I-beams to support far more weight than previous construction methods allowed, and steel framing required less of a poured concrete footing than wood framing (Faizo, Moffet, and Wodehouse 2008). However, because of the cost of shipping, steel was not frequently used in industrial construction in Florida until the twentieth century.

Figure 4-10. An Industrial Vernacular style building at 120 Frank Lloyd Wright Way (P009635) in the South Lake Morton Historic District.

## 4.9 ITALIAN RENAISSANCE REVIVAL (1890–1935)

Italian Renaissance Revival style is an early twentieth-century architectural style that was less popular than other styles of the period, particularly Craftsman, Tudor Revival, and Colonial Revival. The renewed interest in Italian-inspired architecture emerged in the 1890s and was employed by architects as a contrasting style to the popular, ornate Queen Anne and Shingle styles. Buildings of this style differed from their Italianate style predecessors by mimicking Italian architecture more accurately. This accuracy can be attributed to more first-hand knowledge of Italian architecture, as more architects traveled to the country and saw its buildings first-hand, as well as improved printing technology that displayed greater architectural detail in photographs. Italian Renaissance Revival architecture also mimicked the stucco and masonry exteriors of Italian architecture, while Italianate style buildings were generally wood-clad. This evolution in exterior cladding was due in large part to the perfection of masonry veneering techniques by the 1920s. The Italian Renaissance Revival style was initially employed predominantly in urban architect-design landmarks, but by the 1920s, it was more frequently applied to vernacular interpretations. However, by the 1930s, the style's popularity began to decline, and post-1940 applications were uncommon. The style can be recognized by several characteristics, including a low-pitched or flat roof with ceramic tiles; wide eaves with brackets, round arches above doors, windows, and porches; entries accentuated by classical columns; and symmetrical fenestration (Figure 4-11) (McAlester 2015:497–508).

Figure 4-11. An Italian Renaissance Revival style building at 90 South Lake Morton Drive (Sorosio Club, P000113) in the East Lake Morton Historic District.

## 4.10 MASONRY VERNACULAR

With Frame Vernacular, Masonry Vernacular is one of the most common architectural styles within residential buildings. Masonry Vernacular buildings tend to be most commonly used as commercial or residential buildings and are mostly unornamented, simple, and constructed out of readily available materials (Figure 4-12). Also like the Frame Vernacular style, Masonry Vernacular style's guiding principle is the long tradition of simple masonry construction techniques used in Western architecture. Windows and doors are symmetrically spaced on a façade to form a regular rhythm of functional and the negative space is referred to as bays. When there is more than one floor on a Masonry Vernacular style building, openings are aligned from floor to floor for structural purposes. Decoration is simple and usually limited to string courses, window and/or door lintels, and cornices. The use of ready-mixed concrete revolutionized building techniques after 1920, and many times, concrete block was covered in a veneer of brick, stone, or stucco to make composite masonry walls and to enhance the exterior appearance (Upton and Vlach 1986). Rusticated concrete block, blocks molded to appear like cut stone, were also a popular building material used in the construction of Masonry Vernacular resources during the early twentieth century.

Figure 4-12. A Masonry Vernacular style residence at 723 S Mississippi Avenue (P000683) in the South Lake Morton Historic District.

## 4.11 MEDITERRANEAN REVIVAL (1880–1940)

Mediterranean Revival style became immensely popular in Florida during the Land Boom of the 1920s. The style was influenced by the architecture of the Mediterranean Coast and incorporated Italian, Byzantine, and Moorish themes, resulting in an eclectic and fanciful style. Mediterranean Revival style was particularly popular in vacation and resort developments on Florida and California's coasts. The style is characterized by a symmetrical façade, exterior stucco cladding, and flat or ceramic tiled roofs (Figure 4-13). Common ornamentation includes arched fenestration, ornate entries and balconies with classical details, cornices, carved stonework, and parapets. Frequently patios, balconies, and courtyards were included in designs and featured wrought iron or wooden railings (What Is Mediterranean Revival n.d.; Mediterranean Revival n.d.).

Figure 4-13. A Mediterranean Revival style residence at 805 Vistabula Street (P003461) in the East Lake Morton Historic District.

## 4.12 MID-CENTURY MODERN (1945–1969)

The Mid-Century Modern movement is an American design movement in interior, product, graphic design, architecture, and urban development that was popular from roughly 1945 to 1969 during the United States Post-war Period. The Mid-Century Modern movement in the United States was an American reflection of the International and Bauhaus movements. Although the American component was slightly more organic in form and less formal than the International style, it is more firmly related to it than any other. Mid-Century architecture was frequently employed in residential buildings with the goal of bringing modernism into America's Post-war suburbs. This style emphasized creating buildings with ample windows and open floor plans, with the intention of opening interior spaces and bringing the outdoors in (Figure 4-14). Many Mid-Century houses used then-groundbreaking post and beam architectural designs that eliminated bulky support walls in favor of walls seemingly made of glass. Function was as important as form in mid-century designs, with an emphasis placed on targeting the needs of the average American and their family. Roofs were often flat, cantilevered, or gabled, and much of the fluidity and importance of clean lines that can be found in Prairie Style is also reflected in Mid-Century Modern style buildings (Dordick 2022).

Figure 4-14. A Mid-Century Modern style building at 802 E Orange Street (P009477) in the East Lake Morton Historic District.

## 4.13 MIXED

Not all architectural resources adhere to the strict confines of defined styles or building types. Buildings may exhibit characteristics of several styles and reflect transitional periods between popular architectural styles, resulting in eclectic designs. Several buildings with mixed architectural styles were documented in the East and South Lake Morton Historic Districts, including the Zenia Holley House (PO00619). This two-story home with a three-story square tower combines architectural characteristics of both the Prairie and Craftsman styles. It features several characteristics of Prairie style, including a porte cochere, large square porch supports, and an emphasis on horizontal lines through its rows of windows with wide horizontal trim. The home's low-pitched, multi-hip roof with wide, boxed eaves can be attributed to both Prairie and Craftsman styles, and its irregular massing and height are uncommon for either style (Figure 4-15).

Figure 4-15. A mixed style residence at 801 Lexington Street (PO00619, Z Holley House) in the South Lake Morton Historic District.

## 4.14 MODERNE (1930–1950)

Moderne architecture, also sometimes referred to as Style Moderne or simply Moderne, Jazz Age, Jazz Modern, or Jazz style, describes certain styles of architecture popular from the mid-1920s through the 1940s and is closely affiliated with Art Deco style architecture. Originating in the International Exhibition of Modern Decorative and Industrial Arts held in Paris in 1925, the Moderne style is expressed in numerous sub-styles, such as Art Deco, Streamline Moderne, Late Moderne, and in the United States, PWA/WPA Moderne (Sharp 2002). Architectural historian, Richard Guy Wilson, characterized the style by the eclectic co-existence of "traditionalism and modernism" (Wilson and Butler 2002). Moderne architecture and its variants are a part of the Modern Movement in architecture, which was a conscious break with traditional design in pursuit of a new aesthetic free from the styles, forms, and design decisions of the past. Both the Art Deco style and the Moderne style are sometimes referred to as Modernistic for this reason, although the two styles are of distinctly different appearances. The Art Deco style, with its smoothly finished wall surfaces and distinctive ornamentation of chevrons, zigzags, and other geometrical motifs, led to the development of a new, more streamlined, less ornamented style of architecture which became the Moderne style of the 1930s. Influenced by advancements in the industrial design of ships, planes, railroad engines, and automobiles, the Moderne style featured smooth walls (usually stucco) with little surface ornamentation, rounded corners, and curved glass. Moderne buildings have flat roofs and bands of windows with a horizontal emphasis (Figure 4-16). Some buildings of this style have simple pipe balustrades, panels of glass block windows, curved canopies, or aluminum or stainless-steel detailing.

Figure 4-16. A Moderne style building at 215 S Lake Avenue building B (P009567) in the East Lake Morton Historic District.

## 4.15 MINIMAL TRADITIONAL (1935–1950)

Minimal Traditional is an architectural style that evolved from Depression-era homes. The style is considered restrained and draws heavily from a wide range of previous architectural styles such as American Colonial, Colonial Revival, Spanish Revival, Tudor Revival, and American Craftsman. Minimal Traditional was the most abundant architectural style, second only to Frame Vernacular, between the period of 1930 and 1950, when its popularity was replaced by the Ranch style. This style is common in residential construction. It typically has compact or simple floor plans (L-shaped, rectangular, square, etc.), a low-pitch gable roof, and little to no eaves (Figure 4-17). Exterior elevations are often finished with wood siding, smooth stucco, brick, asbestos tile, or masonry veneers (such as concrete block). Windows include casement, picture, multi-pane, or one-over-one sash. Another common trait of the Minimal Traditional style is austerity and a lack of ornamentation, not unlike the Modern style (Baker 2018).

Figure 4-17. A Minimal Traditional style residence at 1017 Pennsylvania Avenue (P000856) in the South Lake Morton Historic District.

## 4.16 NEOCLASSICAL REVIVAL (1895–1955)

The Neoclassical Revival style was a popular residential style in the first half of the twentieth century, although it was not as prevalent as Colonial Revival style. Neoclassical Revival had two periods of peak popularity, 1900 to 1920 and 1925 to the 1950s. The earlier period was characterized by elaborate porch columns and hipped roofs, and the latter was emphasized by side gable roofs and simple, slender columns. The overall characteristics of the style are full-height porches with classical columns (generally Ionic or Corinthian), symmetrical facades, and elaborate doorways (Figure 4-18). Roof-line balustrades and Chippendale railings are also commonly found on Neoclassical Revival style homes. Doorway designs are often based on Revival or Federal style, and windows are generally double-hung. Common subtypes of the style include full-height entry porches, full-façade porches, and one-story buildings (McAlester 2015:435–446).

Figure 4-18. A Neoclassical Revival style building at 41 Lake Morton Drive (Ruthven Building, P003412) in the East Lake Morton Historic District.

## 4.17 POSTMODERN (1960–1989)

Postmodern architecture is a style that emerged in the 1960s as a reaction against the austerity, formality, and lack of variety of modern architecture, particularly in the International style advocated by Philip Johnson and Henry-Russell Hitchcock. The Postmodern movement was significantly influenced by the architect and urban planner, Denise Scott Brown, and architectural theorist, Robert Venturi (Ghisleni 2021). A book published in 1966 by Robert Venturi, *Complexity and Contradiction in Architecture*, was integral to the development of Postmodernism. Venturi praised the quirks of the Mannerist and Baroque architecture of Rome and celebrated popular culture and the everyday architecture of the American Main Street. A later work of Venturi and Scott Brown's, *Learning from Las Vegas* (1972), deconstructed the signs and symbols of the Las Vegas strip and divided buildings into 'ducks,' the sculptural buildings that embodied their message within the structure, and the 'decorated shed,' which used signs to communicate its message (Venturi, Scott Brown, and Izenour 2000). In practice, this meant the renewal of the various meanings contained within the mainly classical architecture of the past and applying them to modern structures. The result was an architecture that embodied historical allusion and dashes of eccentricity. In the late 1990s, Postmodern architecture branched into a multitude of new movements, including high-tech architecture, neo-futurism, new classical architecture, and deconstructivism.

Postmodern buildings have curved forms, decorative elements, asymmetry, bright colors, and features often borrowed from earlier periods (Figure 4-19). Colors and textures were unrelated to, or rather not dictated by, the structure or function of the building. Rejecting the "puritanism" of modernism, it calls for a return to ornamentation and a collection of references borrowed from past styles. Postmodern buildings often combine new forms and features with seemingly contradictory elements of classicism. This style of architecture often breaks large buildings into several different structures and forms, sometimes representing different functions. With the use of different materials and styles, a single building can appear like a small town or village. Postmodernist compositions are rarely symmetric, balanced, or orderly, and oblique buildings which tilt, lean, and seem about to fall over are common.

Figure 4-19. A Postmodern style building at 800 E Palmetto Street (Polk Museum of Art, P009586) in the East Lake Morton Historic District.

## 4.18 PRAIRIE (1900–1920)

Prairie style architecture refers directly to the Prairie school of architectural philosophy, most often attributed to Frank Lloyd Wright. After the Chicago World's Fair in 1893, many architects were disappointed with the Classical Revival styles presented during the expo. The Prairie School's aesthetic became known as Prairie Style when Wright published building plans entitled "A Home in a Prairie Town" in 1901. The style itself is characterized by its use of horizontal lines, both in regard to architectural design and interior design. Gutter downspouts and other vertical elements were hidden in Prairie-style homes, while roofs were long, horizontal, and low-pitched, with wide eaves (Figure 4-20). Handmade craftsmanship was an important element of the Prairie style and much like the Arts and Crafts Movement, emphasized the importance of interior design as well as architectural design, which resulted in a great deal of furniture being built into the home. Simple and natural woodwork is a tenet of the Prairie style exemplified in the design by allowing natural elements to shine and incorporating simple wooden details so that the wood grain may be admired. An open concept floor plan resulted in an open living and dining space, with only the kitchen usually hidden from view. Prairie style homes are also known for their large windows or window walls to allow for the greatest exposure to light and the natural world as possible, in addition to large square porch columns (Storrer 2017).

Figure 4-20. A Prairie style residence at 417 Frank Lloyd Wright Way (Old Deen House, P000129) in the South Lake Morton Historic District.

## 4.19 QUEEN ANNE (1880–1910)

Queen Anne was a common architectural style in the late nineteenth century and was popularized by English architects led by Richard Norman Shaw. Although it was introduced by architects, most Queen Anne style homes in the United States were constructed based on pattern books and catalogs. The country's expanding railroad network at the turn of the twentieth century allowed for the easy shipment of ornate architectural details common to the style. Queen Anne buildings can be identified by several defining features, including irregular roofs with steep pitches, decorative shingles, towers, cutaway bay windows, asymmetrical fenestration and massing, and porches often extending to side elevations (Figure 4-21). Four decorative subtypes of Queen Anne can be found across the country: Spindlework, Free Classic, Half-Timbers, and Patterned Masonry. Most homes of the style fall within the first two subtypes. Spindlework Queen Annes feature delicate turned supports and spindlework ornamentation. These architectural details were made possible by advances in woodworking technology, specifically machine lathes. Free Classic Queen Annes have classical columns, often in groups of three, and Palladian windows (McAlester 2015:345–370).

Figure 4-21. A Queen Anne style residence at 121 Mosswood Road (N.A. Riggins House, P000726) in the South Lake Morton Historic District.

## 4.20 RANCH (1935–1985)

The Ranch architectural style is a specifically residential style. The Ranch style originated in California designs in the 1930s and reached widespread use during the post-WWII housing boom when it became popular in residential construction. The most obvious characteristics include a wide, horizontal emphasis from a broad roof line and a rectangular-shaped plan. However, there are numerous examples of Ranch style homes with L-shaped, Y-shaped, and other shaped plans. The Ranch style house is noted for its long, close-to-the-ground profile and wide-open layout. Window details within this style are often asymmetrical. Entryways, while often simple, are usually recessed below the roofline and feature a single-entry door flanked by sidelights or simple ornamentation on a concrete or masonry porch (Figure 4-22). Chimney features or slightly offset roofs are often used within this style to accentuate the long horizontal roof line, and carport attachments are common (Salant 2006). This style is sometimes easy to confuse with Frame Vernacular buildings clad in brick; however, the window placement, roof line, and detailing set the two styles apart. In addition to plain Ranch style, stylized Ranch style homes were popular from the mid- to late-twentieth century. Stylized ranches incorporate one or more historical design elements, commonly borrowing from styles including Spanish Revival, Colonial Revival, Neoclassical, and Tudor Revival. These iterations of Ranch style peaked in popularity in the 1970s and were prominent in house pattern books of the decade (McAlester 2015:597–614).

Figure 4-22. A Ranch style resource at 50 Lake Morton Drive (P009489) in the East Lake Morton Historic District.

## 4.21 TUDOR REVIVAL (1880–1940)

Tudor Revival style originated when Tudor style architecture received a revitalization in Europe during the early nineteenth century, when the trend toward revivalist architecture gained momentum from the 1893 Chicago World’s Fair, the Columbian Exposition, where historical interpretations of European styles were encouraged. This style was originally used both commercially and residentially but became especially popular for 1920s suburban homes (Sharp 2002). The style is a romanticized revival of timber-frame buildings of the Tudor Period. However, many examples of this architectural style lack the exterior timber framing iconic of a traditional Tudor style building. Residential buildings associated with Tudor Revival tend to be one or two stories and consist of asymmetrical design plans, including window placement (Figure 4-23). Cross-gable, steeply pitched roofs of this style often feature clipped gables. If chimneys are found on these buildings, they often feature stone over-scaled types. Brick-clad versions of these buildings can be found with decorative brickwork or brick rows as part of their exterior design (Tudor Revival Style - 1890 to 1940 n.d.). Tudor Revivals seen in Florida, and much of the Southeastern U.S., tend to forgo the ornamental half-timbering and are entirely clad in brick and/or stucco.

There are several variants of the Tudor Revival style. One such variant is sometimes referred to as the Picturesque Cottage or English Cottage, which typically includes a picturesque (asymmetrical) floor plan but without the half-timbering. A whimsical variant of the Tudor Revival is the playful Storybook Style, also known as the Cotswold Cottage. This style imitates late medieval structures characteristic of England’s Cotswold region.

Figure 4-23. A Tudor Revival style residence at 302 E Charles Street (P000484) in the South Lake Morton Historic District.

## CHAPTER 5. SURVEY RESULTS

This section presents an overview of survey results, a summary of evaluations, and analysis. Working with data from the property appraiser, the FMSF, and historical maps, PaleoWest identified 345 historic buildings and structures in the East Lake Morton Historic District and 774 historic buildings and structures in the South Lake Morton Historic District for survey. The survey of the East and South Lake Morton Historic Districts was fully completed, and both survey areas were comprehensively documented. During fieldwork, 74 resources were found to be demolished, and a small portion were visually inaccessible or duplicate addresses, resulting in the documentation of 1,040 historic buildings and structures within the two districts. Both districts are densely developed, with historic resources documented throughout their boundaries.

In total, 74 previously recorded historic resources were determined to be demolished (Table 5-1). In the East Lake Morton Historic District, 35 previously recorded historic resources were determined to be demolished. These demolitions are dispersed throughout the district, with concentrations evident on Waterloo Avenue and Vistabula Street. In the South Lake Morton Historic District, 39 previously recorded resources were determined to be demolished. These resources are similarly dispersed through the South Lake Morton Historic District, with concentrations evident on Tennessee Avenue and McRorie Street. Upon the completion of this Project, PaleoWest will inform the FMSF of these demolitions.

Synthesized evaluations and analysis of results of surveyed resources in the East Lake Morton and South Lake Morton Historic Districts are presented below. A complete inventory of all surveyed resources is presented in Appendix A.

**Table 5-1. Demolished Previously Recorded Resources in the East and South Lake Morton Historic Districts**

<b>FMSF No.</b>	<b>Address</b>	<b>District</b>

## 5.1 SUMMARY OF EVALUATIONS: EAST LAKE MORTON

The survey of the East Lake Morton Historic District resulted in the documentation of 300 historic buildings and the East Lake Morton Residential District resource group (PO03774). One additional resource (PO09587) adjacent to the East Lake Morton Historic District survey area was also documented. Of the documented historic buildings, PaleoWest recommends five individually eligible for listing in the NRHP: PO00113, PO03411, PO03412, PO03414, and PO09587 (Table 5-2; Figure 5-1). However, PaleoWest does not recommend the pursuit of the individual listing of resources PO00113, PO03411, PO03412, and PO03414, as they are currently contributing resources to the NRHP-listed East Lake Morton Historic District. Individual listing and contributing status in an NRHP-listed historic district offer the same level of recognition for historic properties and provide access to the same opportunities, such as federal historic tax credits. Although PaleoWest does not recommend the pursuit of their individual listing, these resources and resource PO09587 are discussed below.

PaleoWest recommends the remaining 296 historical buildings documented in the East Lake Morton Historic District individually not eligible for listing in the NRHP. These 264 resources did not meet Criteria A or B, as no significant historical associations were determined at a local, state, or national level. None were found eligible under Criterion C, as the buildings were not exemplary or unique samples of their style or had been altered to such a point as to diminish significant historical integrity in building materials, design, or style.

**Table 5-2. Resources Recommended Individually Eligible in the East Lake Morton Historic District**

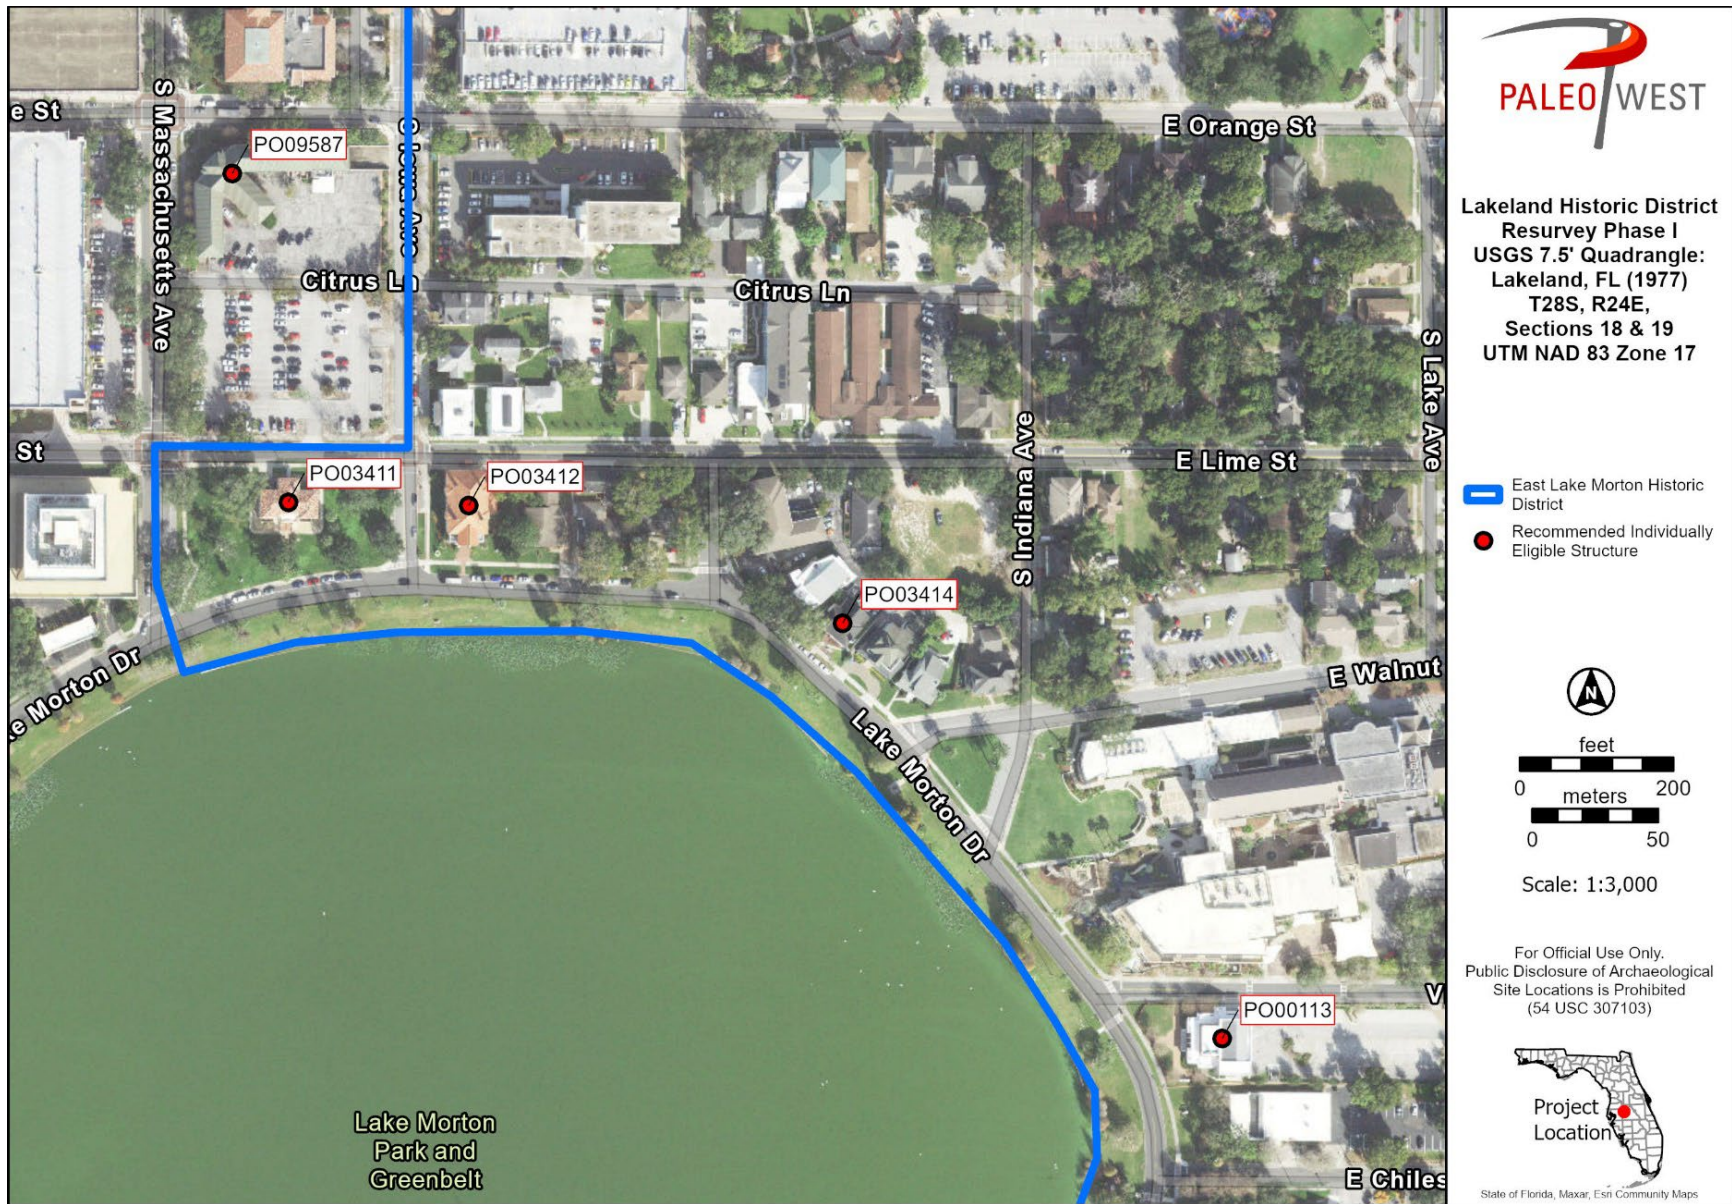

Figure 5-1. Resources recommended as individually eligible for the NRHP in the East Lake Morton Historic District.

### 5.1.1 PO00113: Sorosis Club

The Sorosis Club at 90 Lake Morton Drive is a circa 1927, previously recorded one-story club building with Italian Renaissance Revival style. The Sorosis Club was founded in New York in 1868 by Jane Cunningham Croly, along with Josephine Pollard and Fanny Fern Parton (Sorosis Club n.d.). These women who were all authors, were not permitted to attend a dinner held by the Press Club of New York in honor of Charles Dickens. This treatment led Croly to envision a club created exclusively by and for women to facilitate companionship and education. The club's name, Sorosis, was reportedly selected from a botanical dictionary, and the term has become synonymous with women's associations or clubs (Croly 1898). After several preparatory meetings, the club was officially founded in March 1868 with 12 members. By the following month, membership had more than doubled (Croly 1898).

Recognized as the first women's club in the United States, the Sorosis Club was founded during a period in which women were seeking independence and development. The club forbade the discussion of religion and politics, but all other topics, from science to literature were encouraged. The club's meetings and activities provided women with an opportunity to socialize beyond the gaze of men and with space to discuss the "thought and progress of the age" (Sorosis Club n.d.; Croly 1898). The original New York Sorosis Club proved popular, and it inspired the formation of other women's clubs across the country, many of which adopted the Sorosis name.

The Lakeland Sorosis Club, named in honor of the original club, was organized in April 1922 (The Sorosis Club Building n.d.). Like its namesake, the Lakeland Sorosis Club was founded with 12 members, and it sought to initiate and aid in civic movements. The club initially purchased a building on the corner of Tennessee Avenue and Orange Street, but by 1925, it had bought a lot on the corner of Vistabula Street and Lake Morton Drive to construct a new clubhouse (Sorosis Club City's Newest Organization 1922; The Sorosis Club Building n.d.). This new clubhouse would be designed by Wilbur Burt (W.B.) Talley, a well-known architect in Florida (The Sorosis Club Building n.d.).

Although W.B. Talley is most often associated with the city of Jacksonville, where he resided for 16 years, Talley's roots are in Lakeland. Talley's father, Joseph R. Talley, was a pioneer citizen of Lakeland and one of the city's prominent early builders. The family relocated to Illinois, where W.B. Talley finished his education before returning to the Southeast to work in construction. After working in North Carolina and Georgia, W.B. Talley returned to Lakeland for six years before settling in Jacksonville from 1906 to 1922. After the death of his wife in 1922, W.B. Talley was once again drawn back to Lakeland, where he resided until his death in 1956. He is well-known in the state of Florida for his "public buildings, schools, churches, and commercial structures" as well as "many fine private residences in the Riverside and Avondale area of Jacksonville, Munn Park in Lakeland, and throughout Lake Wales" (Diaz-Fonseca and Jones 2010). His designs reflect a variety of popular early twentieth-century architectural styles, including Neoclassical Revival, Prairie, Gothic Revival, and Romanesque (Diaz-Fonseca and Jones 2010).

The W.B. Talley designed Lakeland Sorosis Club clubhouse was constructed by N.L. Snelson at a cost of \$42,000 and was completed in 1927. The building was considered the first community center constructed in Lakeland (The Sorosis Club Building n.d.). The striking building was designed in Italian Renaissance Revival style, an early twentieth-century style that peaked in popularity during the 1920s. Most early examples of the style are architect-designed urban

landmarks. Although the Sorosis Club dates to a later decade when more vernacular applications of the style were popularized, it is more reminiscent of the style's early examples (McAlester 2015:498). The single-story building features a flat roof with a ceramic-tile clad shed pent roof and is clad in tan brick. It is symmetrically fenestrated, with a central recessed entry bay ornamented with three arches and classical columns. The recessed bay is flanked to either side by rows of three wooden casement windows with transoms and a decorative hood supported by brackets. Decorative in-laid tiles are located above the window rows, and two plaster medallions are centered on the elevation. Above the medallions, a stucco-clad bay features lettering that reads "SOROSIS" (Figure 5-2).

After the building's completion, the Sorosis Club dedicated its new clubhouse in 1928 in a ceremony that paid homage to the nearby Women's Club of Lakeland (PO03412), which was also recently completed (Shiver 1993:8.6). Currently, the Sorosis Club is owned by the Junior League of Greater Lakeland, a women's club established in 1933, which plans to restore the building and operates it as a rental venue (Our History – Junior League of Greater Lakeland n.d.).

PO00133 is currently a contributing resource in the NRHP-listed East Lake Morton Residential District and the locally designated East Lake Morton Historic District. PaleoWest recommends that PO00133 still contributes to the NRHP- and locally listed districts and is individually eligible for the NRHP at the local level under Criteria A and C in the social history, education, and architecture areas of significance with a period of significance from 1927 to 1973. The Sorosis Club retains integrity and was constructed explicitly as a women's club, thus meeting the registration requirements established in *the Clubhouses of Florida's Woman's Clubs* Multiple Property Documentation Form (Johnston and Mattick 1998). The club provided a space for Lakeland's women to socialize, educate themselves, and support civic movements. Additionally, the club is an excellent local example of Italian Renaissance Revival style designed by the prominent Florida architect W.B. Talley.

Figure 5-2. The Sorosis Club (PO00113), facing east.

### 5.1.2 PO03411: Park Trammell Building

The Park Trammel Building at 35 Lake Morton Drive is a circa 1927, previously recorded one-story office building in the Mediterranean Revival style and originally used as Lakeland's public library. Franklin O. Adams Jr. was selected in 1926 to design the city's first library, to be built on the northern shore of Lake Morton (Shiver 1993:8–6). This location was explicitly purchased for the construction of the library (although at some point, the city considered constructing it on Lake Wire before returning to their original plan), and a road was built through the center of the lot so the library grounds could be accessed on all sides (Lakeland Library To Be Built Soon 1925). The chosen architect, Adams, was a Louisiana native who arrived in Tampa in 1914 after pursuing an education at Centenary Chicago, the University of Chicago, and the Massachusetts Institute of Technology. Adams established his own architecture firm in Tampa and resided in the city for the remainder of his life, with the exception of a period spent in Wilmington, Delaware, to aid in the war effort during World War I. He was most productive during the 1920s and 1930s and was regarded as one of Tampa's most prominent architects (Kelley 2020).

The construction of the Lakeland Library between 1926 and 1927 was just one of several civic improvements in Lakeland during the 1920s. During this decade, the city hall and an auditorium were also constructed, providing amenities to Lakeland's growing population (Shiver 1993:8.6). Once completed, the planned public library would supplement a library maintained by the Women's Club (About the Library n.d.). The new library officially opened to the public on January 6, 1927, serving all individuals whose names were in the city directory or who could "furnish satisfactory references from persons whose names" were in the volume (WILL OPEN LIBRARY 1927). Within just six months of opening, the library had 3,220 patrons, and more than half of its 59,068 books were in circulation (LAKELAND LIBRARY HAS BIG PATRONAGE 1927).

In 1955, the Lakeland Public Library was renamed the Park Trammell Building in honor of Florida governor and senator Park Trammell, a Lakeland native (Lakeland Public Library (Park Trammell Building) n.d.). The library continued to operate under the name of the Park Trammell Building until 1966, when a new public library with "modern furnishings and equipment" was dedicated on May 29 (Public Library in Lakeland Gets Once-Over in Dedication Ceremonies 1966). Although there was some argument about which building would be named the Park Trammell Building and which the Lakeland Library, it was ultimately decided that the original building at 35 Lake Morton Drive would retain the Park Trammell name (Name, Plaque Plague Lakeland Library 1966).

Today, the Park Trammell building is used as the office of the Lakeland Chamber of Commerce, but it has retained its original Mediterranean Revival design (Figure 5-3, Figure 5-4). The library's façade faces Lake Morton and is symmetrically fenestrated. It features a low, cross-hip roof with ceramic tiles and a textured stucco exterior. Its recessed entry is centered in an ornate pre-cast concrete arch topped with a broken pediment with a centered urn. A decorative frieze runs below the roofline, and the façade is fenestrated with two rows of three six-over-six arched wooden windows with six-light arched transoms and Corinthian column trim. The building's other elevations are less ornate, featuring the same windows without ornate trim.

PO03411 is currently a contributing resource in the NRHP-listed East Lake Morton Residential District and the locally designated East Lake Morton Historic District. PaleoWest recommends that PO003411 still contributes to the NRHP- and locally listed districts and is individually

eligible for the NRHP at the local level under Criteria A and C in the education and architecture areas of significance with a period of significance from 1927 to 1973. The Park Trammel building was the first public library established in the City of Lakeland and was part of a larger plan to establish official municipal resources for the city's growing population during the Florida Land Boom. The library was designed to promote public accessibility through features including its location at the center of four roads and its large windows that facilitated natural interior lighting. The library is also a good local example of a Mediterranean Revival style municipal building and was designed by prominent Tampa architect, Franklin O. Adams Jr., who also designed the circa 1926 Lakeland City Hall (which was altered by additions in 1956 and 1992) (Parks 1994).

Figure 5-3. The Lakeland Public Library (aka the Park Trammel Building), circa 1940 (image courtesy of the Lakeland Public Library Special Collections, call no. p1456).

Figure 5-4. The Park Trammel Building (P003411), facing north.

### 5.1.3 PO03412: Ruthven Building

The Ruthven Building at 41 Lake Morton Drive is a circa 1913, previously recorded two-story office building in the Neoclassical Revival style, originally constructed as a multi-family apartment. The building was constructed for Spence Minor (S.M.) Stephens, a locally prominent businessman and citrus grower (Johnston 1992a). S.M. Stephens settled in Lakeland by 1885, the year construction of his estate on the east side of Lake Hollingsworth was completed. The estate, known as Greylock's, was regarded as one of Lakeland's "earliest and most elegant private residences" (Greylocks, Home of M. S. Stephens, Lakeland, Fla. n.d.). After S.M. Stephens death in Russelville, Tennessee, in 1925, the home was occupied by Park Trammell (discussed briefly in the previous section). In 1965, the home succumbed to a fire, and its ruins were demolished in 1967 (Greylocks, Home of M. S. Stephens, Lakeland, Fla. n.d.).

In addition to his prominence in the local citrus industry and his grand estate, S.M. Stephens was known for his involvement in the Good Roads Movement in Polk County. Locally, this movement, which began in the later nineteenth century and continued until the establishment of the National Highway System in 1926, led to the paving of streets and sidewalks in Lakeland between 1913 and 1915. Stephens also aided in the development of the Park Hill subdivision and was vice president of the State Bank of Lakeland (Johnston 1992a). Further evidence of Stephens's varied business and social instincts, is his construction of the Ruthven Building, originally known as the Colonial Apartments (Figure 5-5).

Figure 5-5. The Ruthven Building (PO03412), facing northeast.

The Colonial Apartments were designed by W.B. Talley (discussed previously) and constructed at a cost of \$15,000. The building was divided into four apartments, with two apartments on each story (Johnston 1992a). A 1915 advertisement by S.M Stephens in the Lakeland Evening Telegram states, "FOR RENT – Five room flat in the Colonial Apartment house over-looking Lake Morton. All modern Conveniences" (FOR RENT 1915). The building, regarded as the first apartment building constructed in Lakeland, would later be used as a dormitory for Florida Southern College (Ruthven Building n.d.). By the mid-1970s, the building was owned by Joe P. and Jeanette C. Ruthven (Polk County Property Appraiser n.d.). Joe P. Ruthven served a one-year term as Mayor of Lakeland in 1971 and was a local civic leader and businessman involved in numerous organizations active in Lakeland (Joe Ruthven Obituary (1927 - 2019) n.d.). The building is currently owned by Ruthven Holdings LLC, a company associated with the Ruthvens, a distribution company established by Joe P. Ruthven (Polk County Property Appraiser n.d.).

The Ruthven building retains integrity, with no evident alterations, with the exception of the shift of its use from an apartment building to office space. The Neoclassical Revival style building features a ceramic tile hip roof with wide, boxed eaves and four interior brick chimneys. The building is clad in painted brick and is symmetrically fenestrated. Its façade features a prominent central pedimented front gable, two-story portico with full-height Corinthian columns. A full-width two-story porch with a second-story balcony extends the length of the façade and is accessed by a wide central staircase with metal railings. Single one-over-one wooden windows regularly puncture the building's elevations, and two arched entry bays originally provided access to the first-story apartments. The buildings massing, full-height portico with Corinthian columns, and symmetrical fenestration are characteristic of the Neoclassical Revival style.

PO03412 is currently a contributing resource in the NRHP-listed East Lake Morton Residential District and the locally designated East Lake Morton Historic District. PaleoWest recommends that PO003412 still contributes to the NRHP- and locally listed districts and is individually eligible for the NRHP at the local level under Criterion C in the architecture area of significance, potentially under Criterion A in the community planning and development area of significance, and Criterion B for its association with S.M. Stephens, with a period of significance from 1913 to 1973. The building is an excellent local example of Neoclassical Revival style and retains integrity. It exhibits the character-defining features of the style, particularly during its earlier phase of popularity from 1900 to 1920, when hop roofs and elaborate columns were commonly employed. The building is potentially eligible under Criterion A in the community planning and development area of significance as the first apartment building constructed in Lakeland. Several secondary sources make this claim, but it could not be substantiated through primary sources. PaleoWest recommends additional research be undertaken to determine the validity of this claim. The Ruthven building is also potentially eligible under Criterion B for association with S.M. Stephens, a locally prominent businessman. Stephens' Lakeland home was lost to fire in the 1950s, and no other local resources associated with him could be determined through research. However, additional research is necessary to determine if resources exist outside of Lakeland that have a stronger association with Stephens.

#### 5.1.4 PO03414: Women's Club of Lakeland

The Women's Club of Lakeland at 59 Lake Morton Drive is a circa 1928, previously recorded one-story office building in the Colonial Revival style, originally constructed as the Women's Club of Lakeland. The Women's Club of Lakeland predates the previously discussed Lakeland Sorosis Club, having been established ten years earlier (The Women's Club of Lakeland Historical Marker n.d.). It is unknown where the club met prior to the construction of the clubhouse at 59 Lake Morton Drive, but by less than a year after its establishment, it had a reputation for "executive ability and steady enthusiasm...[that] would be marvelous even in an older organization" (WHAT THE WOMAN'S CLUB HAS UNDERWAY 1912). In its first year of existence, the club championed several causes, including a campaign to promote cleanliness in the city with the slogan "Clean up! Do it now!" and fundraising to install drinking fountains in the city's schools and in select public locations (IN READINESS FOR "CLEAN-UP" 1912; Woman's Club Is Meeting This Afternoon With Miss Cochran 1912).

By 1927, the Women's Club had sought out W.B. Talley to design their clubhouse. Located on the northeastern shore of Lake Morton, only several blocks north of the Sorosis Club building, the clubhouse was completed in 1928 by the Billman-Purdy Construction Company at a cost of \$13,000 (The Women's Club of Lakeland Historical Marker n.d.; Johnston 1992b). The club occupied the building until 1986 when the Women's Club and Sorosis Club merged to form the United Women's Club of Lakeland. Prior to the merger, each club sold its respective building (History - United Women's Club of Lakeland n.d.).

The former Women's Club of Lakeland building is currently used as an office building but retains integrity. The W.B. Talley designed building is Colonial Revival in style and features a hip roof with a front-facing gable with eave returns and an exterior brick chimney. The building is clad in wooden shingles and has a wing-wall to its southeast, with an arched entryway. Its primary entry is off-center on the building's façade and is composed of a wooden door with an eight-light full-light set with an arched pediment, square pilasters, and wooden panels (the latter of which have been installed over the door's original sidelights). The building is fenestrated with six-over-six vinyl sash windows, single and in pairs, and a row of four eight-light vinyl casement windows, which replaced wooden windows of the same design (Figure 5-6).

PO03414 is currently a contributing resource in the NRHP-listed East Lake Morton Residential District and the locally designated East Lake Morton Historic District. PaleoWest recommends that PO03414 still contributes to the NRHP- and locally listed districts and is individually eligible for the NRHP at the local level under Criterion A in the social history and education areas of significance with a period of significance from 1928 to 1973. The Women's Club of Lakeland retains integrity, with alterations limited to the material of its windows and modification of its entry sidelights, and was constructed explicitly as a women's club, thus meeting the registration requirements established in *the Clubhouses of Florida's Woman's Clubs* Multiple Property Documentation Form (Johnston and Mattick 1998). Like the later Sorosis Club, the Women's Club of Lakeland provided a space for Lakeland's women to socialize, educate themselves, and support civic movements.

Figure 5-6. The Women's Club of Lakeland (P003414), facing northeast.

### 5.1.5 PO09587: Florida Citrus Mutual

The Florida Citrus Mutual Building at 411 E Orange Street (adjacent to the East Lake Morton Historic District) is a circa 1951, newly recorded two-story office building in the Masonry Vernacular style. Florida Citrus Mutual was founded in 1948 as a private trade organization with the goal of stabilizing the price of citrus in Florida. During the 1940s, market fluctuations affected Florida citrus growers when the price of citrus became too low to cover the costs of production. The Florida Citrus Exchange, a cooperative of citrus growers established in 1909, determined that an organization specifically dedicated to stabilizing citrus prices in Florida was needed (About Us n.d.; The Juicy History of Florida Citrus in the News 2016). Subsequently, Florida Citrus Mutual was established, with the support of key members of the citrus industry, including J.A. Griffin, James C. Morton, Latt Maxcy, C.C. Commander, and Barney Kilgore (About Us n.d.).

Upon the formation of Florida Citrus Mutual, representatives of the organization and the Florida Citrus Exchange began a membership drive across the state. During the first of a series of promotional events in Lakeland, Doyle E. Carlton, former governor of Florida, stated to a crowd of nearly 1,000 growers, "The Florida Citrus Mutual will be able to speak as one voice for the industry. Teamwork is needed and only teamwork, represented by Florida Citrus Mutual will save the industry" (Citrus Mutual Is Explained To 1000 Growers Friday 1948). The organization's campaign proved successful, and within a year of its establishment, Florida Citrus Mutual had more than 6,000 grower members (About Us n.d.). The organization

determined it would only become active when “citrus growers producing at least 75 percent of the total crop had signed up as members,” and this was achieved (State Says Mutual Suit “Harmful” 1953).

After the successful promotion of their organization, Florida Citrus Mutual was officially activated on March 25, 1949 (About Us n.d.). The organization quickly set about achieving its goal of “prevent[ing] price disruptions and losses to growers and handlers caused by unfair and unwarranted competition with the industry” (State Says Mutual Suit “Harmful” 1953). This was done by establishing minimum citrus prices and disseminating pricing information that had previously been unavailable to the public. Although Florida Citrus Mutual was successful in stabilizing citrus prices, leading to prosperous growers, its practices were challenged by the Federal Trade Commission (FTC) in 1952. After five years of deliberation, the FTC determined Florida Citrus Mutual’s price-fixing practices violated the Sherman Antitrust Act of 1890 (Burnette 2019).

Despite the ruling of the FTC, Florida Citrus Mutual continued to operate but with a renewed focus. The organization shifted its goals from price stabilization to price forecasting and marketing information through advertising, research, and lobbying at the state and local level (Burnette 2019). Florida Citrus Mutual has operated continually since its inception in 1948 and was based out of its Lakeland office since the building’s construction until its sale to Publix in 2016 (Bouffard n.d.).

Historically, the Florida Citrus Mutual building in Lakeland exhibited characteristics of Moderne style. These characteristics included its flat roof, an emphasis on horizontal lines through paneling and windows, a smooth stucco exterior, and vertical projections flanking its entry (Figure 5-7). The building has an irregular plan, composed of a central rectangular massing with two angled wings. Historical aerial photography indicates these wings were expanded in the mid- to late 1950s. Between the mid-1980s and late 1990s, the building was further altered with the application of a multi-pitch cross-hip roof, replacing the original flat roof. Additionally, the original multi-light windows on the building’s wings have been replaced with single-light fixed windows of the same size (Figure 5-8). Despite these alterations, the building has retained its integrity of setting, location, feeling, association, and design (having maintained the same footprint, massing, and fenestration during its period of significance).

PO09587 is adjacent to the locally designated East Lake Morton Historic District but is within the boundaries of the NRHP-listed East Lake Morton Residential District, as depicted in the FMSF and scanned maps accompanying the nomination. The building was constructed beyond the NRHP-listed district’s period of significance, 1900–1940. However, the building is not listed as a non-contributing resource in the NRHP-listed district and has not been previously documented in the FMSF. It is likely prior maps of the district have been misplotted, and PO09587 is not within the NRHP-listed district boundary. PaleoWest documented PO09587 and recommends it individually eligible for the NRHP under Criterion A in the agricultural and commerce areas of significance with a period of significance from 1951 to 1973. Additionally, PaleoWest recommends PO09587 eligible for the NRHP as a contributing resource to the NRHP-listed East Lake Morton Residential Historic District and eligible as a contributing resource to the locally designated East Lake Morton Historic District, with an expanded period of significance and boundary alteration. PO09587 served as the headquarters of Florida Citrus Mutual between 1951 and 2016. Florida Citrus Mutual was a significant private trade organization that aided in stabilizing citrus prices across the state of Florida during economic

instability. Despite challenges to their practices in the 1950s, Florida Citrus Mutual has continued to operate as a powerful lobbying agency for Florida citrus growers to the present day. Additionally, Citrus was important to the early economy of Lakeland.

The pursuit of the individual listing of PO09587 or the listing of the building as a contributing resource to the NRHP-listed district with a period of significance expansion to 1973 will result in the same level of recognition and provide access to the same opportunities, such as federal historic tax credits. However, the pursuit of a period of significance expansion for the NRHP-listed district is recommended as the optimal route. Pursuing a period of significance expansion for the NRHP-listed East Lake Morton Historic District will allow the inclusion of additional historic-age buildings constructed after the current district period of significance.

Recommendations regarding the NRHP-listed and locally designated East Lake Morton Historic District are discussed in the section **District Evaluation and Recommendations: East Lake Morton**.

## 5.2 ANALYSIS OF RESULTS: EAST LAKE MORTON

The following analysis includes a statistical review of the survey findings and, when combined with the “Architectural Context” section, is a narrative of the historical evaluation of the architectural styles documented in the East Lake Morton Historic District. A list of building addresses, styles, construction dates, and recommended eligibility is in a comprehensive inventory found in Appendix A.

The surveyed buildings and structures among the resources of the East Lake Morton Historic District are consistent with national and statewide architectural trends. These shared traits lend themselves to a sense of time, place, and physical historical development of East Lake Morton through their workmanship, materials, design, date, and association. The period of historical significance for the survey has been established as all resources built in 1973 or earlier; this cutoff date corresponds to the 50-year criterion established by the National Park Service as a basis for architectural survey and for listing in the NRHP. However, based on the request of the client, one non-age-eligible resource (PO09586) was documented in the East Lake Morton Historic District.

The survey revealed that most of the 301 evaluated resources, 110 (36.5%), were constructed during the Florida Land Boom Period (1919–1929) (Table 5-3). A comparable amount, 83 (27.6%) resources, date to the WWII and Aftermath Period (1942–1959), beyond the current period of significance for the East Lake Morton Historic District. Of the remaining resources, 45 (14.9%) date to the Progressive Era (1890–1918), 37 (12.3%) date to the Contemporary Period (1960–1973), 25 (8.3%) date to the Great Depression and the New Deal Period (1930–1941), and a singular resource, PO09586, dates to the Modern Period (1974 to current) (Figure 5-9). The distribution of documented resources across periods of development reflects the historical developmental booms in the City of Lakeland, notably during the Florida Boom and WWII and Aftermath periods.

**Table 5-3. Development Periods of Documented Buildings and Structures in the East Lake Morton Historic District**

Period	Total	Percentage
Progressive Era (1890–1918)	45	14.9%
Florida Land Boom (1919–1929)	110	36.5%
Great Depression and the New Deal (1930–1941)	25	8.3%
WWII and Aftermath (1942–1959)	83	27.6%
Contemporary (1960–1973)	37	12.3%
Modern (1974 to current)	1	0.3%

The resources recorded in the East Lake Morton Historic District were predominantly (54.1%) single-family residences, which is in keeping with the developmental history of East Lake Morton as a residential, middle-class neighborhood of the City of Lakeland (Table 5-4). Following single-family residences, 52 (17.3%) duplexes, 45 (15%) apartments, and 13 (4.3%) office buildings were recorded. The remaining 9.3 percent of documented resources represent art galleries/museums/planetariums, auto dealerships, club or lodge buildings, community centers, garage apartments and garages, gas stations, a single library, nursing homes, a store, a

theatre, and five vacant buildings. The predominance of single-family homes, multi-family residences, and apartments is indicative of the residential development of East Lake Morton. The East Lake Morton neighborhood developed as one of Lakeland’s earliest residential areas and primarily catered to middle-class residents. Non-residential use resources are few and mostly located on the outer perimeters of the East Lake Morton Historic District and along major transportation arteries adjacent to Downtown Lakeland and on the shore of Lake Morton. More than half of the apartments and duplexes surveyed in the East Lake Morton Historic District date to the WWII and Aftermath Period through the Contemporary Period. These resources reflect the continued residential development of East Lake Morton during the latter half of the twentieth century, albeit through multi-family or rental developments. Such developments reflect a national trend in multi-family building construction from the New Deal through the 1960s (Lasner 2020).

**Table 5-4. Previous Use vs. Current Use in the East Lake Morton Historic District**

<b>Structure Use</b>	<b>Previous</b>	<b>Current</b>
Apartment	44	45

## 5.3 DISTRICT EVALUATION AND RECOMMENDATIONS: EAST LAKE MORTON

The purpose of this Project is to provide the City of Lakeland with an updated inventory of contributing and non-contributing resources in the East and South Lake Morton Historic Districts and to make recommendations for possible district amendments. Based on the results of the survey, PaleoWest recommends that 157 of 158 previously recorded resources in the locally designated East Lake Morton Historic District retain integrity to contribute to the district (Figure 5-10).

Overall, previously recorded resources in the locally designated East Lake Morton Historic District retain integrity, with alterations limited to minimally impactful interventions such as window replacements and siding alterations with in-kind designs. Additions were found to have generally been constructed within the period of significance or located to the rear of buildings and thus less visually impactful. The singular recommended non-contributing previously recorded building (PO03474) was also listed as non-contributing in the NRHP district nomination (Figure 5-11). Three buildings (PO003431, PO03547, and PO03451) currently listed in the NRHP district as non-contributing are recommended as contributing by PaleoWest. These buildings have only minimal alterations, limited to replaced siding and/or windows, and retain their integrity of location, setting, design, feeling, and association (Figure 5-12). Also of note, resource PO03483 is currently listed as both contributing and non-contributing in the NRHP district nomination. PaleoWest documented this resource and recommends it contributing.

Of the newly recorded resources in the locally designated East Lake Morton Historic District, PaleoWest recommends 135 of 142 retain integrity and are age-eligible to contribute to the district within an expanded period of significance to 1973. Thirty of the 135 recommended contributing newly recorded resources were determined to have been constructed within the district's current period of significance and could contribute to the district without a period of significance extension. One additional resource, PO09587, was surveyed adjacent to the locally designated East Lake Morton Historic District. Although this resource is within the boundaries of the NRHP-listed East Lake Morton Residential District, it was not included in the district's original inventory. PaleoWest recommends PO09587 both individually eligible for the NRHP and eligible as a contributing resource to the NRHP-listed historic district with a period of significance expansion to 1973.

Based on these findings, PaleoWest recommends the City of Lakeland pursue a boundary amendment and period of significance expansion to the existing NRHP-listed East Lake Morton Residential District. Currently, the locally designated and NRHP-listed district boundaries differ in one area, the northern half of the district. Previous research indicates that a northern expansion of the NRHP-listed district boundaries, matching the locally designated northern boundary, was partially pursued in 1994. A NRHP nomination form was completed for the expansion and is on record with the FMSF, but the expansion was not listed and the corresponding resource group (PO05298) is listed as unevaluated by SHPO. The northern expansion area is indiscernible in character from the current NRHP-listed district. It is residential in nature, contains buildings of the same dominant architectural styles, developed during the same periods, and was originally in the same 1885 plat as the current East Lake Morton

Residential District boundaries. As depicted in the FMSF and scanned maps accompanying the district's NRHP nomination, the local and NRHP boundaries also differ in the southwestern portion of the district. The western boundary of the locally designated district terminates one block further south than the NRHP-listed district, omitting newly recorded resource PO09587 (Figure 5-13). However, PO09587 is not listed in the inventory for the NRHP-listed district, and it is likely the district's boundaries have been misplotted in earlier maps. Thus, at the request of the City of Lakeland, maps within this report depict the southwestern boundaries of the local and NRHP-listed districts identically.

The NRHP-listed district's current period of significance, 1900–1940, was selected as it corresponded with the 50-year age-eligibility cut-off when the district was nominated to the NRHP in 1993 and due to the lack of development in the district between 1930 and 1940. However, the current Project documented 105 historic buildings in the East Lake Morton Historic District constructed between 1941 and 1973 and determined that the WWII and Aftermath Period (1942–1959) was the second largest period of development in the district, after only the Florida Land Boom Period (1919–1929). Like earlier periods, development in East Lake Morton during the WWII and Aftermath Period through the Contemporary Period (1960–1973) was predominantly residential and reflected popular architectural styles, such as Ranch, Minimal Traditional, Frame Vernacular, and Masonry Vernacular. More multi-family and apartment buildings were also constructed during these periods, reflecting a national development trend. The period of 1941 to 1973 encompasses significant continued residential development in the East Lake Morton Historic District, which was a continuation of its earlier development as a working-class residential neighborhood.

Amending the boundary of the NRHP-listed East Lake Morton Residential District to match the northern boundary of the locally-designated district and expanding the period of significance from 1900–1940 to 1900–1973 would include 154 additional potentially contributing resources to the NRHP-listed district. These resources would include 19 previously recorded resources and 25 newly recorded resources in the northern expansion area, and 110 resources within the current NRHP-district boundary. PaleoWest recommends the City of Lakeland pursues these amendments and updates the NRHP-listed district inventory accordingly based on the results of this survey. If the City of Lakeland pursues these amendments, PaleoWest further recommends that the locally designated district period of significance is also expanded to 1973 to include new potentially contributing resources and that the locally designated district inventory is updated to match that of the NRHP-listed district.

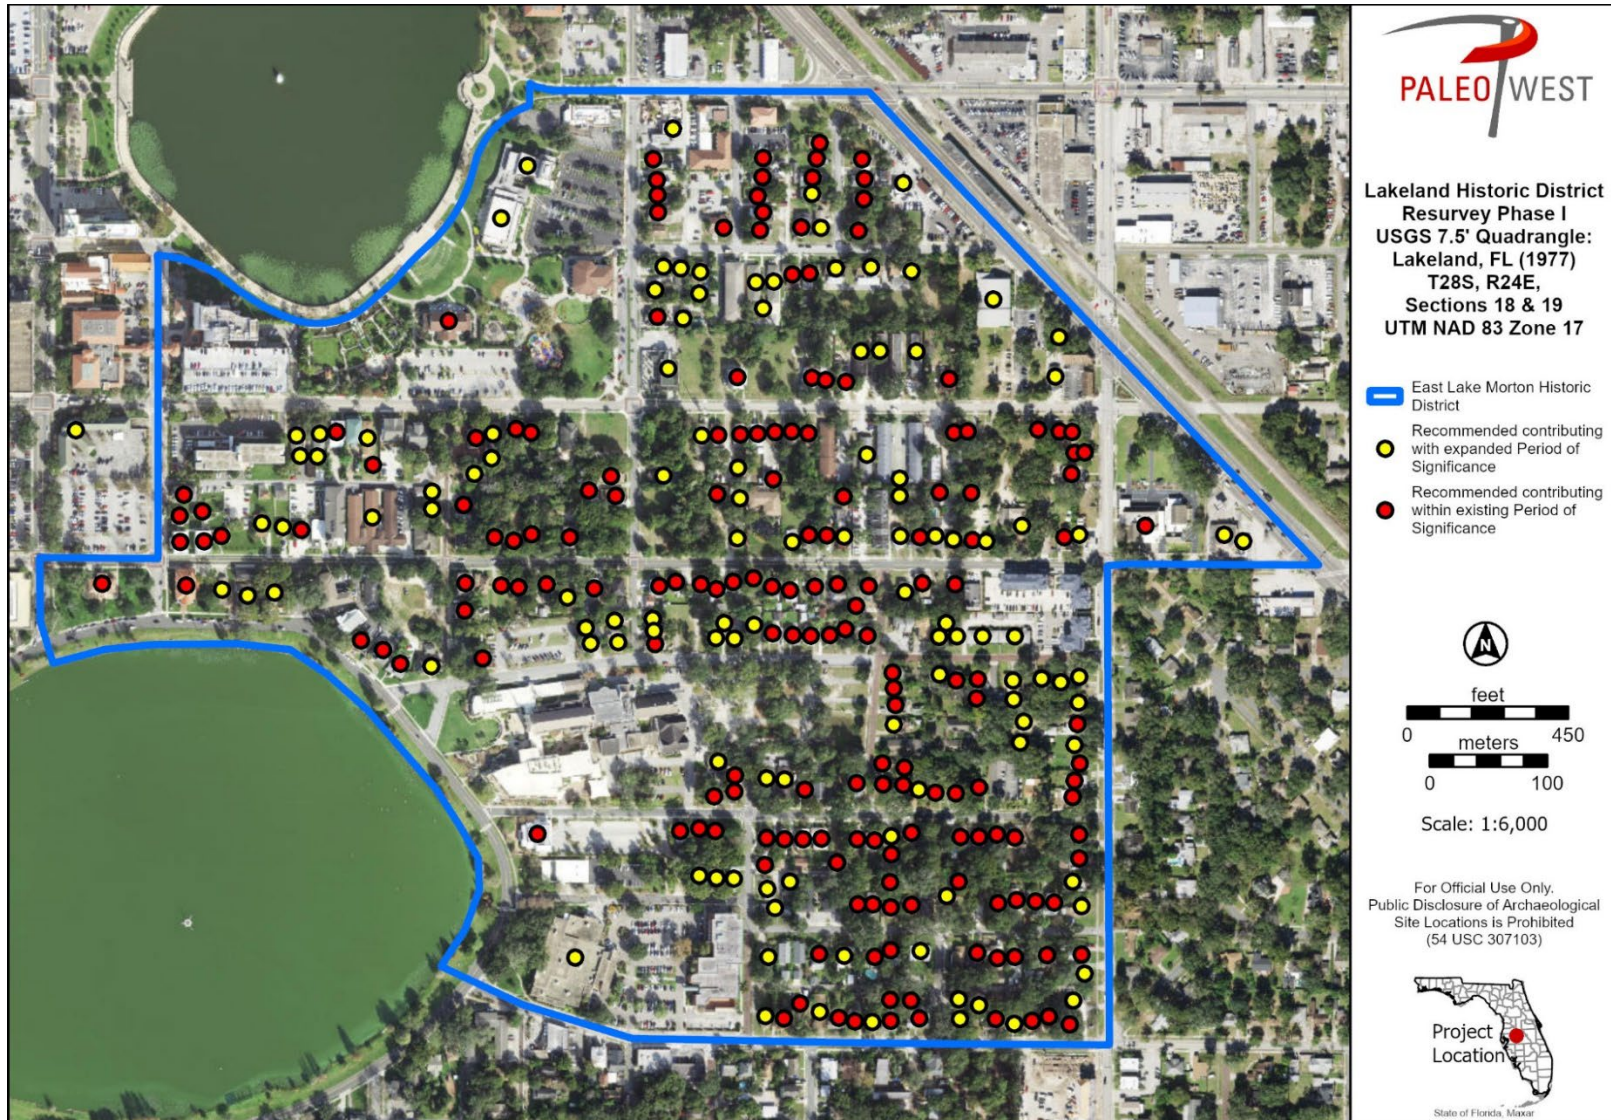

Figure 5-10. Aerial results map depicting resources contributing within the existing East Lake Morton Historic District period of significance and resources potentially contributing within an expanded period of significance ending in 1973.

Figure 5-11. 913 Vistabula Street (P003474), a previously recorded non-contributing building in the East Lake Morton Historic District. This building lacks integrity due to its alteration of materials, fenestration, and its prominent addition.

Figure 5-12. 840 E Palmetto Street (P003431) currently listed as non-contributing and recommended as contributing. Alterations to this circa 1940, Minimal Traditional style home are limited to the application of asbestos siding and the replacement of its original windows.

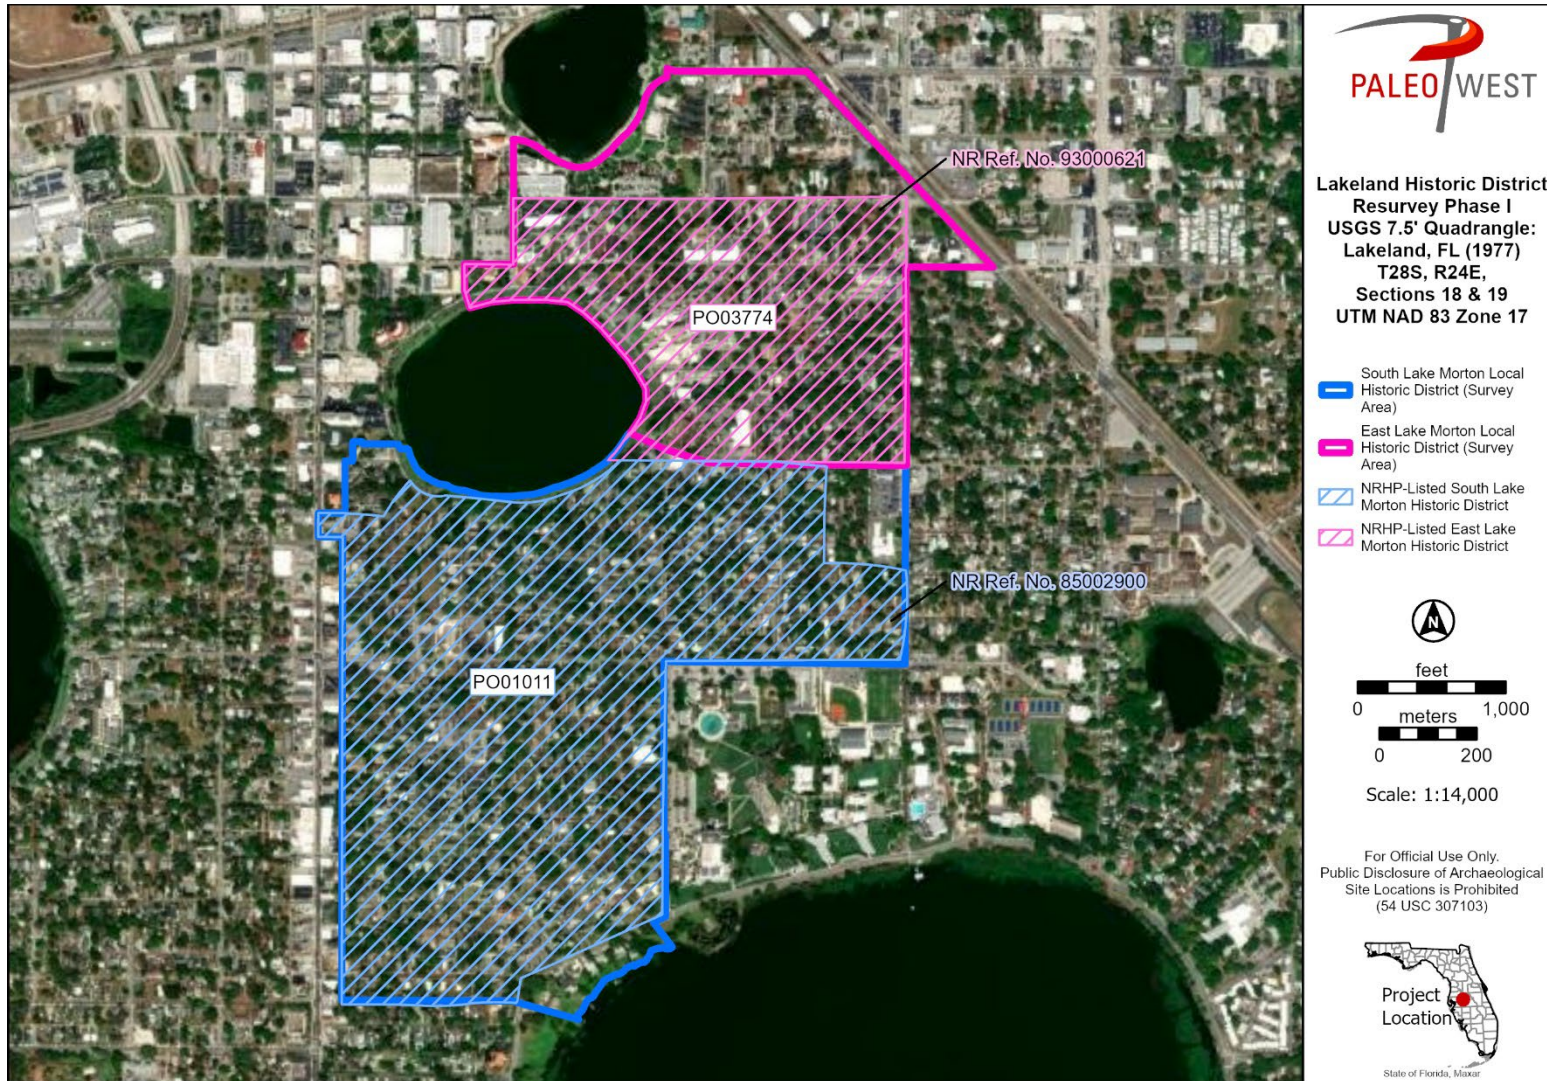

Figure 5-13. Map of Project survey areas and their respective NRHP-listed Historic District boundaries on aerial photography. PaleoWest recommends that the boundary of the NRHP-listed East Lake Morton Residential district be expanded to match that of the locally designated northern boundary.

## 5.4 SUMMARY OF EVALUATIONS: SOUTH LAKE MORTON

The survey of the South Lake Morton Historic District resulted in the documentation of 739 historic resources and the South Lake Morton Historic District resource group (PO01011). Of the documented historic resources, PaleoWest recommends one resource, PO00129, individually eligible for listing in the NRHP. However, PaleoWest does not recommend the pursuit of the individual listing of resource PO00129, as it is currently a contributing resource to the NRHP-listed South Lake Morton Historic District. Individual listing and contributing status in an NRHP-listed historic district offer the same level of recognition for historic properties and provide access to the same opportunities, such as federal historic tax credits. Although PaleoWest does not recommend the pursuit of its individual listing, PO00129 is discussed below.

PaleoWest recommends the remaining 738 historical resources documented in the South Lake Morton Historic District individually not eligible for listing in the NRHP. These 738 resources did not meet Criteria A or B, as no significant historical associations were determined at a local, state, or national level. None were found eligible under Criterion C, as the resources were not exemplary or unique samples of their style or had been altered to such a point as to diminish significant historical integrity in building materials, design, or style.

### 5.4.1 PO00129 (Old Deen House)

The Old Deen House at 417 Frank Lloyd Wright Way is a circa 1912, previously recorded two-story private residence in the Prairie style (Figure 5-14 and Figure 5-15). The Old Deen House was constructed for Columbus William (C.W.) Deen, a successful banker from Jesup, Georgia. In the early 1890s, C.W. Deen offered financial backing to William James Carter, a timber estimator who also came from Jesup, for the construction of a lumber mill on Carter's land east of Lakeland. Carter's lumber business was successful and by 1902, he employed nearly 1,500 people. This success drew the attention of C.W. Deen, who along with Carter's brothers Leonard and Henry Bascom, bought out William Carter's interests in 1905. Shortly after, Deen, Leonard Carter, and Henry Bascom Carter established the Carter Manufacturing Company, which produced finished wood products, pitch, and turpentine (Edwards and Primelles 1985:8.2).

C.W. Deen saw the potential in Lakeland and continued to invest in its development, establishing the Carter-Deen Realty Co. with the two Carter brothers. Their company and the Florida-Georgia Land Co., established by other Georgia investors Deen lured to the area, were the most aggressive developers in early Lakeland. In 1907, Carter-Deen Realty Co. purchased Finney & Cox's Dixieland subdivision, replatted it, and by the following year, were auctioning lots for \$130 to \$150 each. The company then bought a second subdivision adjacent to Dixieland and increased its land holdings threefold. In 1908, Deen relocated to Lakeland with his family and took on a position with Citizens Bank, soon becoming the bank's president. By 1910, Deen's Dixieland and South Lake Morton to its east were the fashionable neighborhoods in which Lakeland's upper class settled (Edwards and Primelles 1985:8.3).

Accordingly, Deen had a home constructed for his family in the heart of South Lake Morton, on the corner of Success Avenue, a north-south artery lined with prominent homes, and Frank Lloyd Wright Way (historically E McDonald Street). The home, constructed close to Pecan groves owned by Deen, was designed in the Prairie style, which rose in popularity between

1900 and 1920 (Edwards and Primelles 1985:8.4). Architect Guy Johnson Platt designed the home, and its construction was completed in 1912 at a cost of \$15,000 (Edwards n.d.; Justice 2013). The large tan brick-clad home features a low-pitched hip roof with wide eaves and a wrap-around porch across its north and east elevations. The hip roof porch is supported with oversized battered square, stucco supports with geometric ornamentation. Projections on the roof of the porch give the illusion that the supports continue; the projections feature the same geometric details and are each topped with an urn planter. The home is fenestrated with rows of single-light wooden casement windows and one-over-one casement windows. Brick bellybands emphasize the horizontal qualities of the home, and geometric ornamentations extend from the hip roof's frieze.

The home's façade faces Frank Lloyd Wright Way, and it is accessed through a wooden door with a full glass light flanked by large glass sidelights, topped with three transoms. A two-story carriage house of a compatible but less ornate design is southwest of the home. Although the interior of the Deen House could not be documented during the survey, sources describe the home's large interior plan. It featured a "living room, dining room, reception hall and reception room, bedrooms, bathrooms, butler's pantry, servants' stairs, [and a] sewing area" (Justice 2013).

Figure 5-14. The Old Deen House (P000129), facing southwest.

Figure 5-15. The Old Deen House (PO00129) recommended individually eligible for the NRHP.

C.W. Deen and his family occupied their family home until Deen's death in 1927. During Deen's occupancy of the home, he continued to lead Citizens Bank and the Carter-Deen Realty Co. During this period, he also founded Florida Favorite Fertilizer Inc. and Sand Gully Phosphate Inc. and purchased interests in citrus (Edwards n.d.). After Deen's death, the home was purchased by Judge R. Lee Wright and was operated as a hospital or sanitorium through the 1930s under the supervision of Dr. Thomas Causey. In 1940, the home was deeded to Florida Southern College, and it was transitioned into use as a dormitory named Wright's Hall. Between 1940 and 1993, Florida Southern College used the home as a fraternity house, faculty housing, and finally, as a storage facility. In 1994, Lon Stanley and Keith Etheredge purchased the home and began extensive restoration work. This restoration has continued since Steve and Stephanie Shelnut purchased the home in 2012 (Justice 2013).

PO00129 is currently a contributing resource in the NRHP-listed South Lake Morton Historic District and the locally designated South Lake Morton Historic District. PaleoWest recommends that PO00129 still contributes to the NRHP- and locally listed districts and is individually eligible for the NRHP at the local level under Criteria B and C in the architecture and community planning and development areas of significance with a period of significance from 1912 to 1973. The home is significant for its association with C.W. Deen during his productive career in Lakeland as one of the city's most prominent developers and businessmen. It also retains integrity and is an excellent example of the Prairie style, embodying many of the style's defining characteristics.

## 5.5 ANALYSIS OF RESULTS: SOUTH LAKE MORTON

The following analysis includes a statistical review of the survey findings and, when combined with the "Architectural Context" section, is a narrative of the historical evaluation of the architectural styles documented in the South Lake Morton Historic District. A list of building addresses, styles, construction dates, and recommended eligibility is in a comprehensive inventory found in Appendix A.

The surveyed building and structures among the resources of the South Lake Morton Historic District are consistent with national and statewide architectural trends. These shared traits lend themselves to a sense of time, place, and physical historical development of South Lake Morton through their workmanship, materials, design, date, and association. The period of historical significance for the survey has been established as all resources built in 1973 or earlier; this cutoff date corresponds to the 50-year criterion established by the National Park Service as a basis for architectural survey and for listing in the NRHP. However, two previously recorded resources in the South Lake Morton Historic District were found to be constructed beyond the period of age-eligibility. When originally documented, their construction dates were recorded as circa 1960 and unlisted. Modern property appraiser data provided more accurate construction dates, and PaleoWest has updated their corresponding FMSF to reflect these build dates.

The survey revealed that most of the 739 evaluated resources, 461 (62.4%), were constructed during the Florida Land Boom Period (1919–1929) (Table 5-5). Of the remaining resources, 42 (5.7%) were constructed during the Progressive Era (1890–1918), 89 (12%) were constructed during the Great Depression and the New Deal Period (1930–1941), 101 (13.7%) were

constructed during the WWII and Aftermath Period (1942–1959), 44 (5.9% were constructed during the Contemporary Period (1960–1973), and two (0.3%) were constructed during the Modern Period (1974 to current) (Figure 5-16). Like the East Lake Morton Historic District, the distribution of documented resources across periods of development reflects the historical developmental booms in the City of Lakeland, notably during the Florida Boom and WWII and Aftermath periods.

**Table 5-5. Development Periods of Documented Buildings and Structures in the South Lake Morton Historic District**

Period	Total	Percentage
Progressive Era (1890–1918)	42	5.7%
Florida Land Boom (1919–1929)	461	62.4%
Great Depression and the New Deal (1930–1941)	89	12%
WWII and Aftermath (1942–1959)	101	13.7%
Contemporary (1960–1973)	44	5.9%
Modern (1974 to current)	2	0.3%

The resources recorded in the South Lake Morton Historic District were predominately (75.9%) single-family residences, which reflects the residential development of South Lake Morton (Table 5-6). Following single-family residences, 62 (8.2%) apartments, 57 (7.7%) duplexes, 23 (3.1%) garage apartments, ten (1.3%) educational-related buildings, four (0.5%) office buildings or offices, and four (0.5%) vacant buildings. The remaining 2.8 percent of documented resources represent art galleries/museums/planetariums, childcare facilities, a club or lodge building, commercial buildings, a pavilion, religious buildings, restaurants, stores, and a warehouse. The predominance of single-family homes, multi-family residences, and apartments is indicative of the residential development of South Lake Morton. The South Lake Morton neighborhood developed as an early residential neighborhood of Lakeland and experienced significant growth during the Florida Land Boom Period. The neighborhood had a high concentration of middle-class housing, particularly of the Bungalow architectural type, as well as more ornate and stately homes occupied by the city’s upwardly mobile. Non-residential use resources in the South Lake Morton Historic District are relatively few, and most are clustered along the district’s boundaries to the north and northwest. Just under half of the apartments and duplexes surveyed in the South Lake Morton Historic District date to the WWII and Aftermath Period through the Contemporary Period, reflecting a national trend in multi-family building construction from the New Deal through the 1960s.

**Table 5-6. Previous Use vs. Current Use in the South Lake Morton Historic District**

## 5.6 DISTRICT EVALUATION AND RECOMMENDATIONS: SOUTH LAKE MORTON

The purpose of this Project is to provide the City of Lakeland with an updated inventory of contributing and non-contributing resources in the East and South Lake Morton Historic Districts and to make recommendations for possible district amendments. Based on the results of the survey, PaleoWest recommends that 528 of 541 previously recorded resources in the locally designated South Lake Morton Historic District retain integrity to contribute to the district (Figure 5-17).

Overall, most previously recorded resources in the locally designated South Lake Morton Historic District retain integrity, with alterations limited to minimally impactful interventions such as window replacements and siding alterations with in-kind designs. Of the 13 previously recorded resources recommended non-contributing, four are currently listed as non-contributing in the NRHP-listed historic district. An additional two of the 13 previously recorded resources recommended non-contributing are within the locally designated district boundaries but outside of the NRHP-listed district boundaries, north of Mosswood Avenue. The remaining seven previously recorded resources recommended non-contributing, have been altered such as to diminish their integrity and no longer convey their historic significance. For example, resource PO00521 (827 College Avenue) was constructed circa 1930, and when originally documented, was a small single-story Bungalow residence. In the early 2000s, according to information obtained from the Polk County Property Appraiser, the home was significantly altered by the addition of a large two-story massing to its front elevation. Although the addition was designed in a compatible style and materials, the building's original massing is no longer visible from the public right of way, and the addition fundamentally altered the building's scale and design (Figure 5-18).

Of the newly recorded resources in the locally designated South Lake Morton Historic District, PaleoWest recommends 169 of 198 retain integrity and are age-eligible to contribute to the district within an expanded period of significance to 1973 (Figure 5-19). Forty-eight of the 169 recommended contributing newly recorded resources were determined to have been constructed within the district's current period of significance and could contribute to the district without a period of significance extension.

Based on these findings, PaleoWest recommends the City of Lakeland pursue a boundary amendment, a period of significance expansion, and Criteria amendment to the existing NRHP-listed South Lake Morton Historic District. Currently, the locally designated and NRHP-listed district boundaries differ in three areas: the northeast boundary, northwest boundary, and southern boundary along Lake Hollingsworth (Figure 5-20). The northeast boundary of the NRHP-listed district ends on the western side of Winfree Avenue, while the locally designated district boundary extends further east, ending at S Ingraham Avenue. The eastern side of Winfree Avenue contains residences constructed during the predominant periods of development in South Lake Morton in styles that are common throughout the district. PaleoWest recommends that the NRHP-listed district boundary be amended to run north-south on the east side of Winfree Avenue between E Palmetto Street and Cumberland Street, extending west to include parcels 242819000000014030, 242819000000014090, 242819000000014160, and 242819217500000072 (containing resources PO00764, PO09629, PO09628, and PO00544).

Figure 5-17. Aerial results map depicting resources contributing within the existing South Lake Morton Historic District period of significance and resources potentially contributing within an expanded period of significance ending in 1973.

In the northwest corner of the South Lake Morton Historic District, PaleoWest recommends expanding the NRHP-listed district boundary to match that of the locally designated boundary. The locally designated boundary contains a circa 1925 single-family residence, a circa 1925 apartment building, and a circa 1957 apartment complex containing eight buildings, all of which are recommended contributing to the district (the latter eight buildings within an expanded period of significance). These resources are in popular styles found in the South Lake Morton Historic District, keep with the residential nature of the neighborhood, reflect a national trend in multi-family building from the mid- to late twentieth century, and retain integrity.

Along the southern boundary of the South Lake Morton Historic District, PaleoWest recommends extending the NRHP-listed district boundary south to include two parcels on the south side of Lake Hollingsworth drive: 242819220100020183 and 242819220100020182, which contain resources PO09431 and PO09430, respectively. Both of these newly recorded buildings are recommended contributing within an expanded period of significance, having been constructed in popular mid-twentieth-century styles and retaining integrity.

Like the East Lake Morton Historic District, the South Lake Morton Historic District's current period of significance, 1904–1935, was selected to correspond with the 50-year age-eligibility cut-off when the district was nominated to the NRHP in 1985. However, the current Project documented 136 newly recorded historic buildings in the South Lake Morton Historic District constructed between 1936 and 1973 and determined that the WWII and Aftermath Period (1942–1959) was the second largest period of development in the district, only after the Florida Land Boom Period (1919–1929). The period of development in East Lake Morton between 1936 and 1973 represents significant continued residential development and reflects the national trend towards apartment and multi-family development. Additionally, several resources constructed between circa 1900 and circa 1902 were documented during the current Project. The current period of significance begins in 1904 and should be expanded to encompass these select resources.

Pursuing the recommended boundary amendments and period of significance expansion would include 180 additional potentially contributing resources to the NRHP-listed district (12 previously recorded resources and 13 newly recorded resources in the recommended boundary expansions and 155 newly recorded resources in the current NRHP-listed district boundary). PaleoWest recommends that the City of Lakeland pursues these amendments and updates the NRHP-listed district inventory accordingly based on the results of this survey. If the City of Lakeland pursues these amendments, PaleoWest further recommends that the northeastern and southern boundaries of the locally designated district be altered to match that of the NRHP-listed boundary, that the locally designated district period of significance is also expanded to include new potentially contributing resources, and that the locally designated district inventory is updated to match that of the NRHP-listed district.

In addition to these recommendations, PaleoWest encourages the City of Lakeland to also pursue an amendment to the Criteria under which the NRHP-listed South Lake Morton Historic District is listed in the NRHP. Currently, the district is listed only under Criterion C in the architecture area of significance for its high concentration of Bungalow homes and its "scattering of early homes dating from the 1904–1917 periods" (Edwards and Primelles 1985:8.1). However, the nomination also states the district is significant for its association with the early development of Lakeland, developers during the Florida Land Boom Period, and as the location where many of Lakeland's economic and political leaders, such as C.W. Deen, settled.

PaleoWest recommends that the district is eligible under Criteria A and B, in addition to Criterion C, for the reasons described in the current NRHP nomination.

Further, PaleoWest encourages the City of Lakeland to pursue a future survey of historic-age resources south of the current South Lake Morton Historic District boundary. This boundary is the only portion of the district that does not abut another NRHP-listed historic district. An analysis of property appraiser data and windshield survey indicated there are ten additional historic-age buildings on the north side of Palmola Street, adjacent to the current district boundary. These buildings are residences constructed during the same prominent developmental periods as the South Lake Morton Historic District and are in styles found throughout the district. PaleoWest recommends that any future survey adjacent to the district's southern boundary be geographically based on subdivisions that developed concurrently with the current district.

Figure 5-18. 827 S College Avenue (P000521), a previously recorded recommended non-contributing building in the South Lake Morton Historic District. This building has lost its integrity due to the large two-story addition made to its façade.

Figure 5-19. 211-213 Frank Lloyd Wright Way (P009690), a circa 1955 newly recorded resource in the South Lake Morton Historic District recommended contributing within an expanded period of significance.

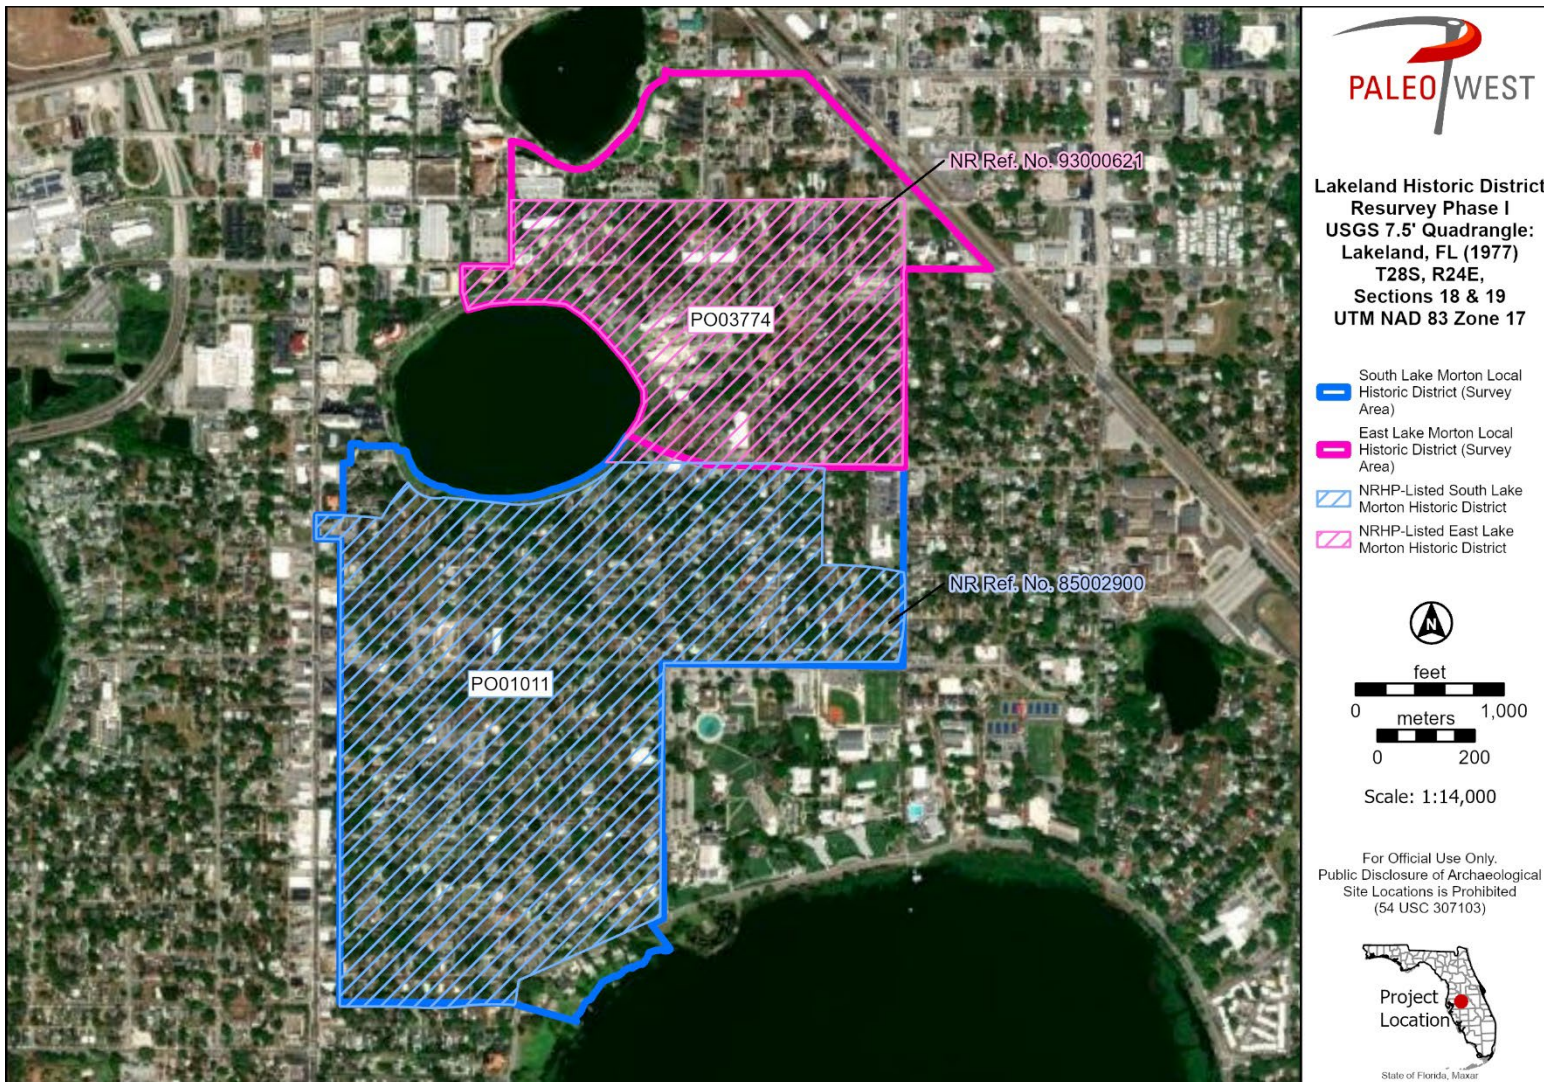

Figure 5-20. Map of Project survey areas and their respective NRHP-listed Historic District boundaries on aerial photography. PaleoWest recommends that the boundary of the NRHP-listed South Lake Morton Historic District be expanded to the northwest, northeast, and south along the shore of Lake Hollingsworth.

## CHAPTER 6. RECOMMENDATIONS

Architectural surveys such as this one are an essential step in a community's preservation programming and can provide a valuable historical and architectural catalog upon which educated decisions about preservation within the community can be made. However, these surveys are only one of many steps a community may take to strengthen its preservation programming or planning. Further steps in preserving significant resources within these communities will depend on continued planning and the decisions of local government officials and residents. To assist the City of Lakeland in deciding what steps are available, PaleoWest offers the following recommendations.

1. PaleoWest encourages the City of Lakeland to pursue the recommendations set forth in this report, updating the NRHP-listed and locally designated East and South Lake Morton Historic Districts to include additional potentially contributing resources.
2. City staff, elected officials, and interested residents can use the information within this report to promote awareness of the historical fabric of the East and South Lake Morton Historic District. Possible steps to disseminate the information within the report include making the report available online or in public spaces, such as local libraries or community centers.
3. PaleoWest encourages the City of Lakeland to continue working with residents and advocacy groups to locate, identify, and assess resources for potential eligibility for listing in the NRHP, both within its existing historic districts and in previously unsurveyed areas. PaleoWest recommends future surveys occur in the area south of the current South Lake Morton Historic District boundary.
4. The City of Lakeland can produce a pamphlet, signs, and/or a story map (an online and interactive educational tool) to share the findings of this survey with the community. PaleoWest encourages the city to place historical markers at the location of resources recommended individually eligible in this survey report (with the exception of the Sorosis Club and Women's Club of Lakeland, which already have historical markers installed).
5. The upkeep of historical buildings can be expensive. The City of Lakeland can work with a consultant or internally to gather information on tax incentives provided by the state and federal government that may be able to ease the financial burden associated with preservation efforts.
6. It is often the goal for preservation to go hand in hand with sustainability. Most historical buildings are designed for their environment, making them energy efficient. Rehabilitating and adaptively reusing buildings is one way to revitalize, restore, or upcycle an existing building. PaleoWest encourages the City of Lakeland to promote the use of historic tax credits and to embrace historical buildings as the greenest development option.
7. PaleoWest recommends addressing disaster preparedness in a preservation planning capacity. Hurricanes pose a regular threat to historical resources in Florida. It is recommended that a disaster preparedness plan be developed for the historic resources of the City of Lakeland.

## CHAPTER 7. CONCLUSION

On behalf of the City of Lakeland, PaleoWest conducted a survey of historical resources in the locally designated East and South Lake Morton Historic Districts. The Project was funded through a small matching grant from the Division of Historical Resources, Florida Department of State. The purpose of the Project was to identify, document, and evaluate all historic resources within the locally designated East Lake Morton and South Lake Morton Historic Districts constructed before 1974, and to provide the City of Lakeland with an updated inventory of contributing and non-contributing resources in the respective districts and recommendations for possible district amendments.

The City of Lakeland identified the Project survey area as the boundaries of the locally designated East and South Lake Morton Historic Districts and all resources within them previously recorded or constructed before 1974 (50 years of age). PaleoWest intensively surveyed each survey area with photo documentation, notes, and FMSF form documentation. PaleoWest documented 1,042 historical resources, with 341 newly recorded resources and 701 updated resources, including resource groups PO01011 (South Lake Morton Historic District) and PO03774 (East Lake Morton Residential District). Of these resources, 300 were documented within the East Lake Morton Historic District, and 739 were documented in the South Lake Morton Historic District. One additional resource (PO09587) was documented adjacent to the East Lake Morton Historic District at the request of the City of Lakeland. During fieldwork, 74 selected resources in both survey areas were determined to be demolished.

Of the documented resources, six (PO00113, PO00129, PO03411, PO03412, PO03414, and PO09587) are recommended individually eligible for the NRHP and eligible as contributing resources to their respective districts. However, as these resources are either currently contributing to their respective districts or could contribute with amendments, PaleoWest does not recommend the pursuit of their individual listing. Individual listing and contributing status in an NRHP-listed historic district offer the same level of recognition for historic properties and provide access to the same opportunities, such as federal historic tax credits.

PaleoWest also produced an updated inventory for the locally designated East and South Lake Morton Historic District, including list of building addresses, styles, construction dates, recommended individual NRHP eligibility, and recommended contributing or non-contributing district eligibility. Based on the Project historical context, previous research, and the results of the survey, PaleoWest recommends that the City of Lakeland pursue amendments to the NRHP-listed East and South Lake Morton Historic Districts, and amend their locally designated districts accordingly. In the East Lake Morton Historic District, these recommendations include adjustments to the northern district boundary and expanding the period of significance from 1900–1940 to 1900–1973. In the South Lake Morton Historic District, these recommendations include adjustments to northeastern, northwest, and southern district boundaries, expanding the period of significance from 1904–1935 to 1900–1973 and amending the Criteria for which the NRHP-listed South Lake Morton Historic District is listed in the NRHP to include Criteria A and B in addition to Criterion C.

PaleoWest recommends that the City of Lakeland disseminate the findings of this survey through accessible formats like pamphlets or an interactive online map to encourage the continued preservation of Lakeland and its community's shared heritage. PaleoWest

commends the City of Lakeland for its dedication to historic preservation and its forward-thinking in resurveying its currently listed Historic Districts.

Project documentation, including field notes, photographs, and research is located at 916 East Park Avenue, Tallahassee, Florida 32301, under Project number 22-0589.

## Manuscript Information

### Survey Project (name and project phase)

Lakeland Historic Districts Resurvey, Phase I, Polk County

### Report Title (exactly as on title page)

LAKELAND HISTORIC DISTRICTS RESURVEY, PHASE I, POLK COUNTY, FLORIDA

### Report Authors (as on title page)

- 1. Althea Wunderler-Selby, M.S.
- 2. Emma Keethler, M.S.
- 3. Shannon Bruffett, Ph.D.
- 4. Kevin Gidusko, M.A., R.P.A.

Publication Year 2023

Number of Pages in Report (do not include site forms) \_\_\_\_\_

### Publication Information (Give series, number in series, publisher and city. For article or chapter, cite page numbers. Use the style of *American Antiquity*.)

PaleoWest, 916 E Park Avenue, Tallahassee, Florida 32301, technical report no. 22-469

Supervisors of Fieldwork (even if same as author) Names Althea Wunderler-Selby, Emma Keethler

Affiliation of Fieldworkers: Organization PaleoWest Archaeology City Tallahassee

### Key Words/Phrases (Don't use county name, or common words like *archaeology, structure, survey, architecture, etc.*)

- 1. Lakeland
- 2. East Lake Morton
- 3. South Lake Morton
- 4. Florida Land Boom
- 5. Bungalow
- 6. \_\_\_\_\_
- 7. \_\_\_\_\_
- 8. \_\_\_\_\_

### Survey Sponsors (corporation, government unit, organization, or person funding fieldwork)

Clear Sponsor Values

Name City of Lakeland Organization \_\_\_\_\_

Address/Phone/E-mail 228 S Massachusetts Ave, 863-834-6000

Recorder of Log Sheet Althea Wunderler-Selby Date Log Sheet Completed 1-5-2023

Is this survey or project a continuation of a previous project?  No  Yes: Previous survey #s (FMSF only) \_\_\_\_\_

## Project Area Mapping

Clear Mapping Values

### Counties (select every county in which field survey was done; attach additional sheet if necessary)

- 1. Polk
- 2. \_\_\_\_\_
- 3. \_\_\_\_\_
- 4. \_\_\_\_\_
- 5. \_\_\_\_\_
- 6. \_\_\_\_\_

### USGS 1:24,000 Map Names/Year of Latest Revision (attach additional sheet if necessary)

- 1. Name LAKELAND Year 1977
- 2. Name \_\_\_\_\_ Year \_\_\_\_\_
- 3. Name \_\_\_\_\_ Year \_\_\_\_\_
- 4. Name \_\_\_\_\_ Year \_\_\_\_\_
- 5. Name \_\_\_\_\_ Year \_\_\_\_\_
- 6. Name \_\_\_\_\_ Year \_\_\_\_\_

## Field Dates and Project Area Description

Fieldwork Dates: Start 10-10-2022 End 10-13-2022 Total Area Surveyed (fill in one) \_\_\_\_\_ hectares 360.00 acres

Number of Distinct Tracts or Areas Surveyed 2

If Corridor (fill in one for each) Width: \_\_\_\_\_ meters \_\_\_\_\_ feet Length: \_\_\_\_\_ kilometers \_\_\_\_\_ miles

Research and Field Methods

Types of Survey (select all that apply):  archaeological  architectural  historical/archival  underwater
 damage assessment  monitoring report  other (describe): \_\_\_\_\_

Scope/Intensity/Procedures

Intensive survey of all pre-1974 historic resources in the locally designated East and South Lake Morton Historic Districts

Preliminary Methods (select as many as apply to the project as a whole)

Florida Archives (Gray Building)  library research- local public  local property or tax records  other historic maps  LIDAR
 Florida Photo Archives (Gray Building)  library-special collection  newspaper files  soils maps or data  other remote sensing
 Site File property search  Public Lands Survey (maps at DEP)  literature search  windshield survey
 Site File survey search  local informant(s)  Sanborn Insurance maps  aerial photography
 other (describe): \_\_\_\_\_

Archaeological Methods (select as many as apply to the project as a whole)

Check here if NO archaeological methods were used.
 surface collection, controlled  shovel test-other screen size  block excavation (at least 2x2 m)  metal detector
 surface collection, uncontrolled  water screen  soil resistivity  other remote sensing
 shovel test-1/4" screen  posthole tests  magnetometer  pedestrian survey
 shovel test-1/8" screen  auger tests  side scan sonar  unknown
 shovel test 1/16" screen  coring  ground penetrating radar (GPR)
 shovel test-unscreened  test excavation (at least 1x2 m)  LIDAR
 other (describe): \_\_\_\_\_

Historical/Architectural Methods (select as many as apply to the project as a whole)

Check here if NO historical/architectural methods were used.
 building permits  demolition permits  neighbor interview  subdivision maps
 commercial permits  windshield survey  occupant interview  tax records
 interior documentation  local property records  occupation permits  unknown
 other (describe): \_\_\_\_\_

Survey Results

Resource Significance Evaluated?  Yes  No
