

Drone Survey Area Map

Work Starts Monday, February 19, 2024

The AECOM Drone Survey Team will be working in the community starting on **Monday, February 19, 2024**, and our efforts are scheduled to be complete in approximately two weeks.

AECOM will implement cutting edge Light Detection and Ranging (LiDAR) technology with the help of a drone to create high-resolution models of ground elevations for the Lake Bonnet Drainage Project. The drone will zig-zag through the sky at about 200 feet above the ground and will cover the entire project area. The AECOM Drone Survey Team will be painting Ground Check Point Arrows throughout the Drainage Basin Study Area as noted by the yellow circles on the map above.
